Assignment: Reading 1.1

Subject: Functional English

Submitted by: Saad Mughal

Student ID: F2023-009

Section: B

Submission Date: 01-OCT-2023

Sustainable Development Goals

In 2015, 193 countries that make up the United Nations (UN) agreed to adopt the 2030 Agenda for Sustainable Development. Sustainable Development Goals short for (SDGs) comprise of 17 goals that need to be attained by the year 2030. The goals target dignity, peace, prosperity, poverty, sanitation and life under water for the planet and humankind.

Goal 14: Life Below Water

The goal is to preserve the marine ecosystem. Healthy oceans are an important part of sustainability as they make up 70 percent of our world. Literally every species on the planet relies on oceans, seas, and rivers for food, energy and water. Yet we do a tremendous amount of damage to these precious resources. We should protect these resources not only for us but also for our fellow living creatures and future generations.

My Views

It's unfortunate but before this I had never actually thought about sustainability proactively. From everything I've researched my knowledge and understanding is still pretty limited.

In my opinion it's great that we have started thinking and acting on these issues before they could go out of hand and bring calamities and disasters in later years. This planet is our home and we're the only ones who can protect it.

These topics and issues should be shared with children at a young age so that when they're in adulthood it's normal for them to feed the poor, save water, electricity and food as much as possible and the importance of everything provided to them by this planet and its inhabitants.

My Questions

Q1. How do we stop using bottled water?

Q2. Scientists literally created plastic, can't they invest in discovering ways to destroy it without harming the environment?
