Assignment: Reading 5.1

Semester: 01

Department: SCIT (BSCS)

Course: Functional English

Submitted by: Saad Mughal

Submitted to: Miss Naureen Zaman

Student ID: F2023-009

Section: B

Submission Date: 30-OCT-2023

7 Ways to help End Hunger

1. Fund Humanitarian Efforts to Prevent Famine

Donate money to welfare organizations like WWF, WFP and SDG

2. Invest in Smallholder Farmers

Farmers are the backbone of society, they do the real work but are appreciated the least and taken for granted. Governments and other investing bodies have to subsidize agricultural production for smallholder farmers, whether by directly providing essential inputs, enabling access to grants and credit, or investing in broader system reforms that make farmers more resilient in the face of shocks so that they can handle costs of essentials like seeds, fertilizers, water and technologies like tractors etc.

3. Invest in Climate-Smart Agriculture

Companies must invest in climate smart forms of agriculture that support the regeneration of ecosystems, protect forests, and restore the health of soil to maintain crop yield and reduce emissions.

4. Promote a Planetary Health Diet

Eat healthy, increase intake of fruits and vegetables. Abstain from processed food.

5. Eliminate Food Waste

An estimated 40% of food produced worldwide is wasted. In other words, we produce more than enough food to eliminate global hunger. There should be better distribution of food, and universal access to refrigeration technology. Food prices should be reduced. It is estimated that 1.4 billion tons of food rot in landfills annually, countries should make sure food serves its intended purpose: nourishing people.

6. Ensure Everyone Can Afford Nutritious Diets

Increase wages or reduce food affordability.

7. Ensure Universal School Meals

Hungry students have a harder time paying attention, retaining information, and engaging in school, which ends up undermining their future productivity. Providing students with school meals is a simple way to help students do their best in the classroom and grow into healthy, capable adults.

My Views

I don't think there's a shortage of food, on the contrary I think there's more than enough for everyone. The problem is that selective people have more food than others, they don't appreciate its value and either store it, waste it, or just don't think of sharing it. A lot of people eat more than they need and yes I'm talking about the US in this case. The amount of obesity in America is a genuine biohazard. Since people like fast food so much, their food companies have started making meat vegetables. Yes, a burger patty which is more delicious than meat

itself but made entirely of vegetables but i guess people just don't have much of a conscience regarding their own health and the health of others around them. It wouldn't hurt to donate and help someone starving in the streets.

My Questions

Not sure why governments don't give good incentives to food companies to provide and further their reach in places with famine?
