

Things to be Learned:

1. Reading a research paper
2. How to focus on your expertise in an interdisciplinary project
3. Familiarity with Agentic AI
4. *Semester Project [Deep Learning Course]*
5. *How to approach knowledge?*

Major Milestones:

1. Understand the code to know how the following paper uses agentic AI: [ALBERT #1] [EULER #1]
 - a. The Virtual Lab of AI agents designs new SARS-CoV-2 nanobodies
 - b. Umer to provide OpenAI API <Limit: 200 USD>
2. Replicate it with Open Source APIs [For one group perhaps] [EULER #2]
 - a. {Currently, the method is using paid OpenAI API calls}
 - b. Code Re-write
3. Change the team of agents to help in the problem of “Building human models of brain health and diseases” <Input from Medical Experts> [ALBERT #2]
 - a. Using Agentic AI to guide protocol design
 - b. Brain development and regionalization
 - c. Tissue engineering
 - d. Small molecules and growth factor
4. Write a paper on this <optional> <depends on how fast you guys proceed>

Goal:

Researchers in University of Aberdeen will be ultimately using this for “Building human models of brain health and diseases” and

Also Do Validation of the AI designed protocol in Lab

Knowledge:

- 1.Retrieve
- 2.Understanding
- 3.Application
- 4.Analysis
- 5.Synthesis
- 6.Evaluation
