Instructions

Dear Students,

I hope all is well. I, Ali Haider, your course instructor for Multivariable Calculus, am writing to provide a quick summary of 6th week lectures and some important instructions.

In the this week, we developed a solid understanding of important topics such as Parabola, Ellipse and Hyperbola. We discussed these concepts with a basic introduction and foundational explanations. Please try to grasp these topics, as they will be helpful for the lectures in the upcoming week.

Below are some practice questions for you to solve. Please make an effort to solve these questions independently. However, if you encounter any difficulties, feel free to reach out to me for assistance.

Important Note: In the upcoming 7th week, be prepared for the 2nd assignment, which I will conduct in a quiz format. Then, in the 8th week, we will have Quiz 2.

Practice Questions

- **Chapter 11:** *Calculus of Parametric Curves*
- **Exercise:** 11.6
- **page:** 690
- **Q:** 27 to 34 (Including examples of same type)
- **Review Exercise is also included for your practice**
- **Chapter 12:** *Vectors and the Geometry of Space*
- **Exercise:** 12.1
- **Page:** 704

- **Questions:** 1 to 16

-

These questions are from the textbook *Thomas' Calculus*. Please attempt all the questions and reach out if you need clarification or further guidance.

Next Week's Plan

Next week, we will complete 12.1, 12.2, 12.3.
