

# BNU CHATBOT

Sara Haider | Khadijah Zahoor | Ramsha Naveed

## PROBLEM STATEMENT

Current campus assistance systems are time-consuming due to manual processes involved. They are also fragmented, with a lack of centralized resources to efficiently address student needs. Additionally, these systems are inefficient, often leading to delayed responses to urgent questions and concerns.

## MOTIVATION

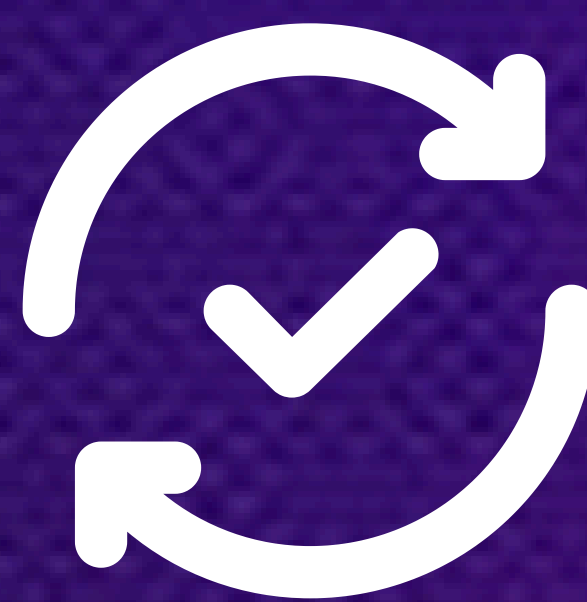

Students often face difficulties in:

Finding information about campus facilities.

Accessing FAQs

Getting timely updates on events and schedules

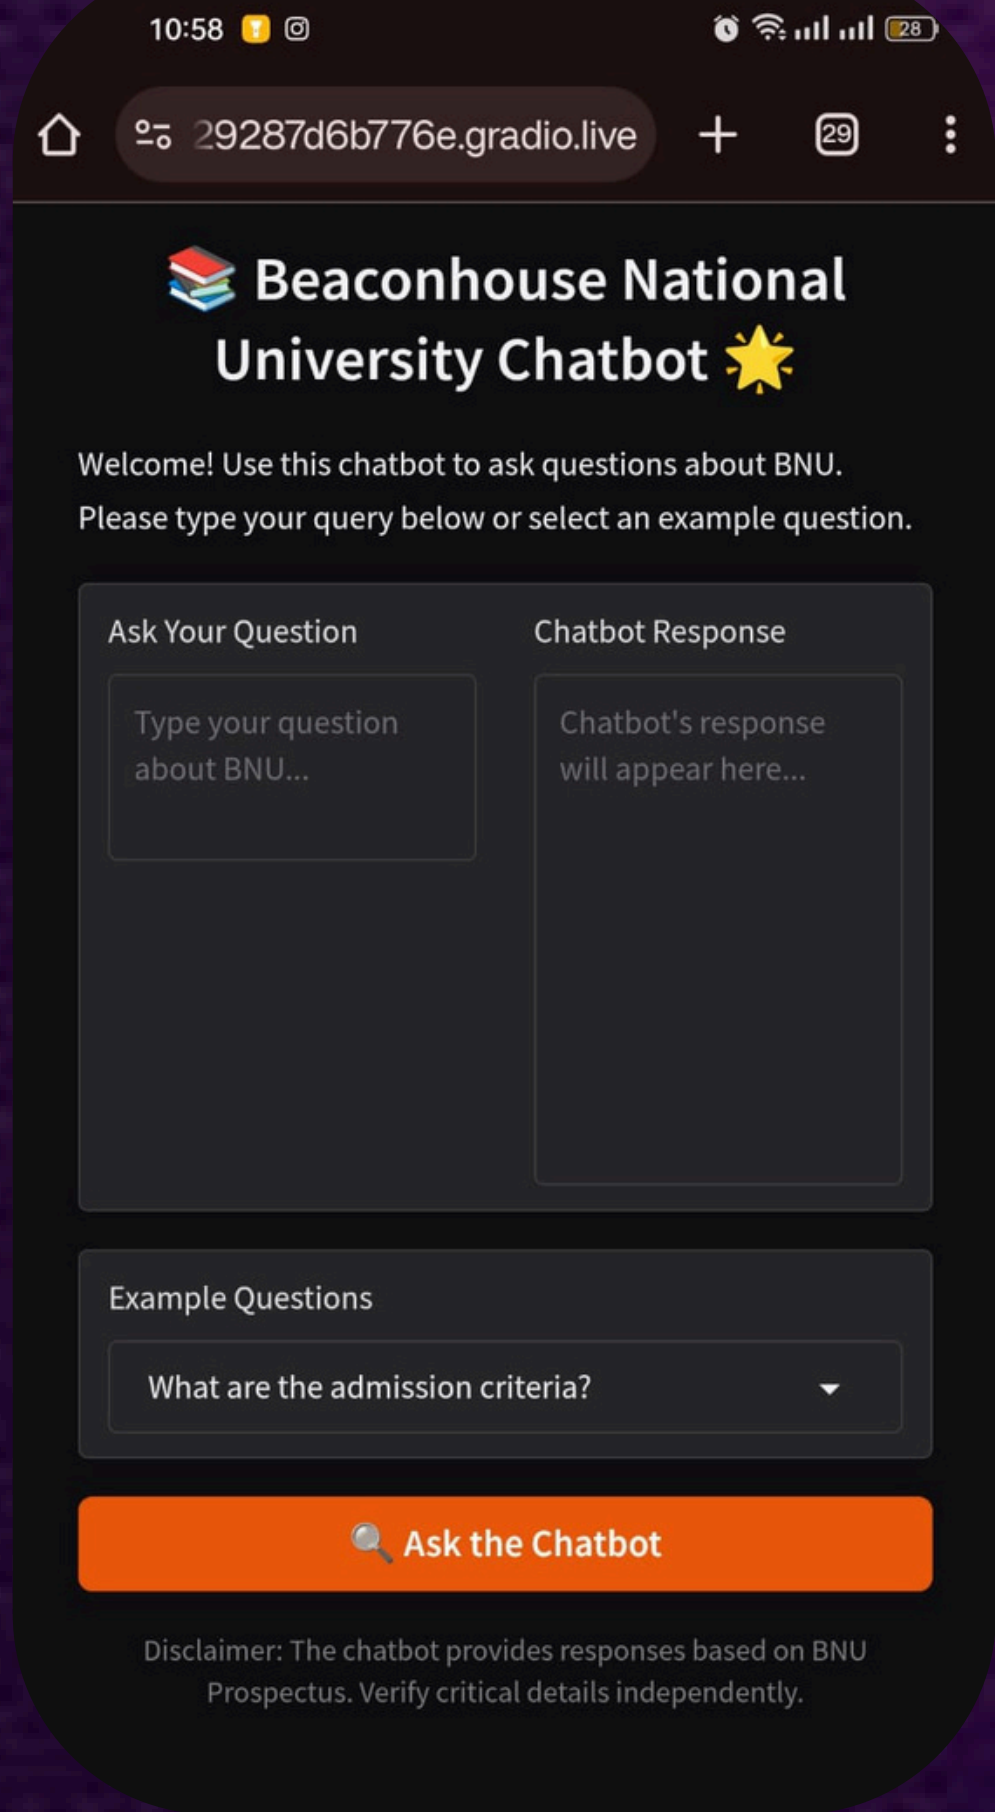

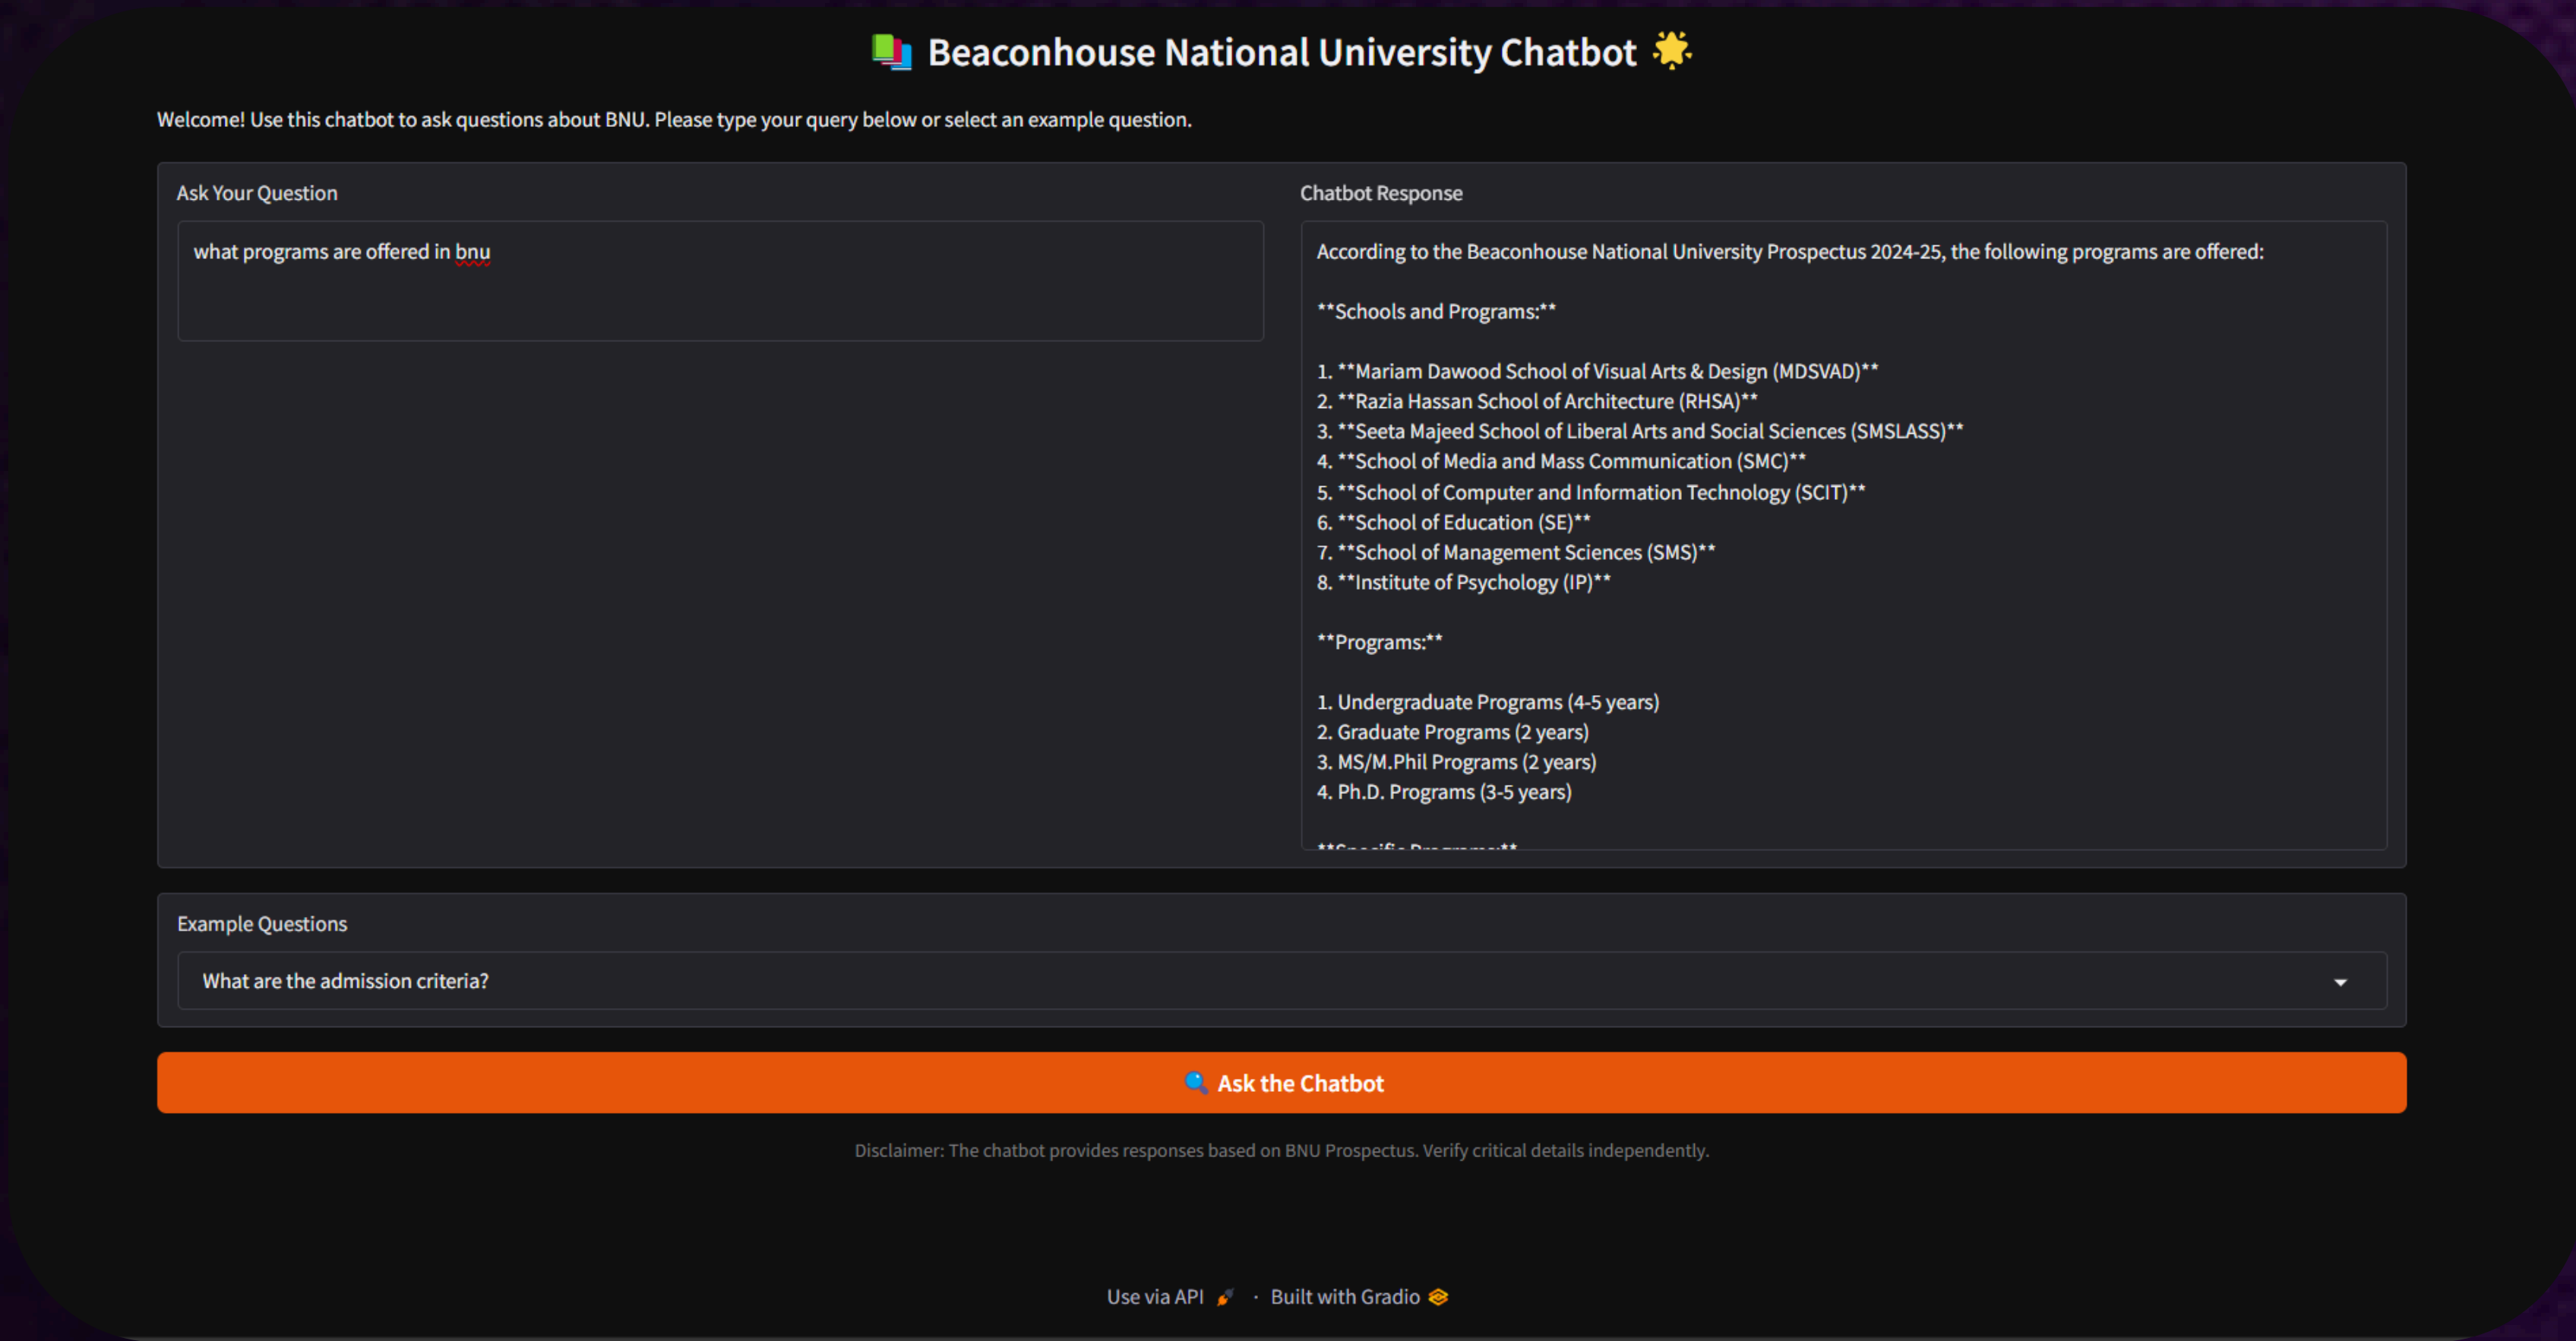

## Solutions

A smart AI chatbot to provide instant assistance, improving the student experience and efficiency.

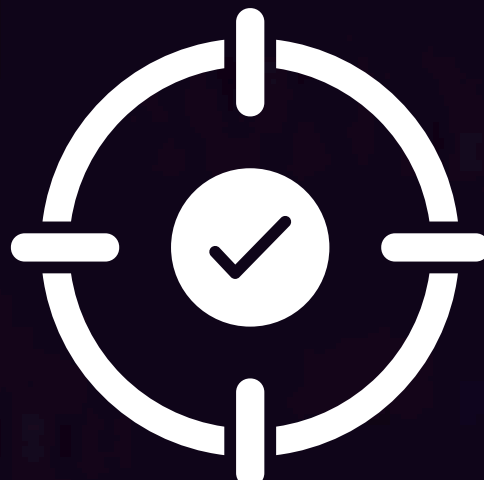

## Proposed Chatbot Architecture

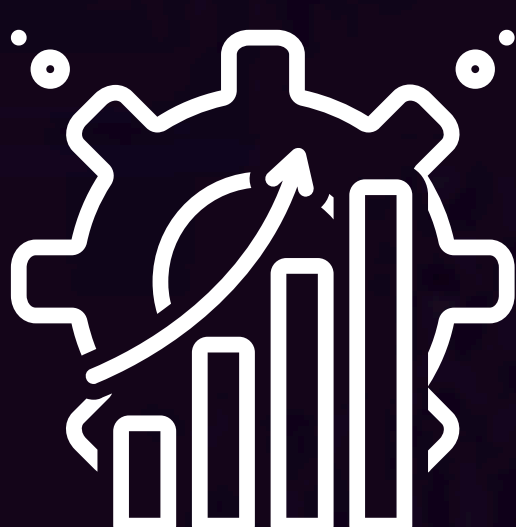

- PDF Upload → Text Extraction → Vector Store Indexing
- User Query → Vector Store Search → Relevant Data Retrieval
- Prompt Construction → Groq API → Response Generation

## Results:

**Accuracy**  
95% success rate in answering FAQs

**Efficiency**  
Average query response time: 2 seconds.
