
Digital Marketing (BUS-300)

Quiz: 3 (Solution)

Date: 16-12-2025

Instructor: Nimra Abbas

Total Marks: 15

Time Hour: 30 minutes

Name: _____

Reg. No: _____

Question:1**[2+3+2+3+5]****Attempt the following:****1. Choosing the Right Platform**

A startup sells handmade kids' toys and wants quick visibility with limited budget and no professional content team.

Solution:

The most suitable platform for this startup is Facebook and Instagram.

Justification:

Facebook and Instagram provide quick visibility at low cost, are highly effective for visual products like kids' toys, and offer easy tools for posting, running ads, and messaging without needing a professional content team. The startup can use organic posts, Reels, and low-budget ads to reach parents and build awareness quickly.

2. A clothing brand wants to automatically respond when users comment "PRICE" on Instagram posts and guide them to a WhatsApp link.

Explain:

- a) Which automation tool should be used?
- b) Which platforms must be connected before automation can work?
- c) One risk of using automation without proper setup?

Solution:

(A part) : A tool like ManyChat (or Meta's comment automation tools) should be used to automatically reply to comments and send messages

(B part): Instagram Business account

- Facebook Page (linked with Instagram)
- ManyChat account
- WhatsApp Business account

These platforms must be properly linked for comment-to-message and WhatsApp redirection to work.

(C part): If automation is not set correctly, users may receive wrong messages, broken links, or no reply at all, which can damage brand trust and lead to lost customers.

3. A social media manager manually posts content on Facebook and Instagram separately and often misses posting schedules.

Question:

Analyze how Meta Business Suite can improve this workflow. Discuss three key benefits related to content, communication, or performance tracking.

Solution:

Meta Business Suite can significantly improve this workflow by centralizing content management, communication, and performance tracking in one platform.

1. Content Management & Scheduling:

Meta Business Suite allows the manager to create, schedule, and publish posts and reels for both Facebook and Instagram from one dashboard. This helps maintain consistent posting and prevents missed schedules.

2. Communication & Inbox Management:

It provides a unified inbox where messages and comments from Facebook and Instagram can be managed in one place. This improves response time and ensures no customer query is missed.

3. Performance Tracking & Insights:

Meta Business Suite shows analytics such as reach, engagement, audience growth, and post performance. This helps the manager understand what content works best and improve future strategies.

4. A business owner wants to run paid ads but does not understand the structure of Meta ads. Explain the relationship between Campaigns, Ad Sets, and Ads using a simple business example.

Solution:

Meta ads work in a three-level structure: **Campaign → Ad Set → Ad.**

- A Campaign is where the business chooses the main goal, such as brand awareness, traffic, or sales.
- An Ad Set controls who sees the ad, where it appears, the budget, and schedule (for example, women aged 18–35 in Lahore with a daily budget of PKR 1,000).

Simple business example:

A clothing brand wants to promote a new summer dress.

- Campaign: “Summer Dress Sales” (Objective: Conversions)
- Ad Set: Target women 18–35, interested in fashion, show ads on Instagram and Facebook
- Ad: A photo/video of the dress with “Shop Now” button

An ad campaign generated the following results:

- Total Spend: PKR 6,000
- Total Impressions: 60,000
- Total Clicks: 600

Calculate **CPM**, **CPC**, and **CTR**. Show complete working for each metric.

Solution:

Formula:

$$1.) \text{ CPM} = (\text{Total Spend} \div \text{Total Impressions}) \times 1000$$

Working:

$$\begin{aligned}\text{CPM} &= (6,000 \div 60,000) \times 1000 \\ \text{CPM} &= 0.1 \times 1000 \\ \text{CPM} &= \text{PKR } 100\end{aligned}$$

2. CPC (Cost per Click)

Formula:

$$\text{CPC} = \text{Total Spend} \div \text{Total Clicks}$$

Working:

$$\begin{aligned}\text{CPC} &= 6,000 \div 600 \\ \text{CPC} &= \text{PKR } 10\end{aligned}$$

3.) CTR (Click Through Rate)

Formula:

$$\text{CTR} = (\text{Total Clicks} \div \text{Total Impressions}) \times 100$$

Working:

$$\begin{aligned}\text{CTR} &= (600 \div 60,000) \times 100 \\ \text{CTR} &= 0.01 \times 100 \\ \text{CTR} &= 1\%\end{aligned}$$
