
Digital Marketing (BUS-300)

Quiz: 3

Date: 16-12-2025

Instructor: Nimra Abbas

Total Marks: 15

Time Hour: 30 minutes

Name: _____

Reg. No: _____

Attempt the following Questions: (CLO 4)
[2+3+2+3+5]

1. Choosing the Right Platform

A startup sells handmade kids' toys and wants quick visibility with limited budget and no professional content team.

Solution:

The most suitable platforms for this startup are Facebook and Instagram.

Justification:

These platforms provide quick visibility at a low cost and are ideal for visual products like handmade kids' toys. The startup can post simple photos, short videos, and reels without needing a professional content team, and can also use low-budget ads to reach parents and families effectively.

2. A clothing brand wants to automatically respond when users comment "PRICE" on Instagram posts and guide them to a WhatsApp link.

Explain:

- Which automation tool should be used?
- Which platforms must be connected before automation can work?
- One risk of using automation without proper setup?

Solution:

Part A:

A tool like ManyChat should be used to set up automatic replies to Instagram comments and send users a message with a WhatsApp link.

Part B:

- Instagram Business account
- Facebook Page (linked with Instagram)
- ManyChat account
- WhatsApp Business account

These must be properly connected for automation to function.

Part C:

Users may receive wrong or no messages, broken links, or delayed replies, which can frustrate customers and damage brand trust.

3. A social media manager manually posts content on Facebook and Instagram separately and often misses posting schedules.

Question:

Analyze how Meta Business Suite can improve this workflow. Discuss three key benefits related to content, communication, or performance tracking.

Solution:

Meta Business Suite can improve this workflow by bringing content creation, communication, and performance tracking into one platform.

1. Content & Scheduling:

It allows the manager to create, schedule, and publish posts and reels for both Facebook and Instagram from one dashboard, ensuring consistent posting and fewer missed schedules.

2. Communication & Inbox:

It provides a single inbox to manage messages and comments from both platforms, helping the manager reply faster and not miss customer queries.

3. Performance Tracking & Insights:

Meta Business Suite shows analytics such as reach, engagement, and post performance, helping the manager evaluate results and improve future content strategy.

4. A business owner wants to run paid ads but does not understand the structure of Meta ads. Explain the relationship between Campaigns, Ad Sets, and Ads using a simple business example.

Solution:

Meta advertising follows a three-level structure: Campaign → Ad Set → Ad.

- A Campaign defines the main goal, such as awareness, traffic, or sales.
- An Ad Set controls the target audience, budget, schedule, and placements.
- An Ad is the actual promotional content, including the image/video, text, and call-to-action.

Simple example:

A clothing brand wants to promote a new winter jacket.

- Campaign: “Winter Jacket Sales” (objective: conversions)
- Ad Set: Target men and women 18–35, interested in fashion, daily budget PKR 1,000
- Ad: Jacket image/video with “Shop Now” button

5. An ad campaign generated the following results:

- Total Spend: PKR 6,000
- Total Impressions: 60,000
- Total Clicks: 600

Calculate **CPM**, **CPC**, and **CTR**. Show complete working for each metric.

Solution:

Formula:

$$\text{CPM} = (\text{Total Spend} \div \text{Total Impressions}) \times 1000$$

Working:

$$\text{CPM} = (6,000 \div 60,000) \times 1000$$

$$\text{CPM} = 0.1 \times 1000$$

$$\text{CPM} = \text{PKR } 100$$

CPC (Cost per Click)

Formula:

$$\text{CPC} = \text{Total Spend} \div \text{Total Clicks}$$

Working:

$$\text{CPC} = 6,000 \div 600$$

$$\text{CPC} = \text{PKR } 10$$

CTR (Click Through Rate)

Formula:

$$\text{CTR} = (\text{Total Clicks} \div \text{Total Impressions}) \times 100$$

Working:

$$\text{CTR} = (600 \div 60,000) \times 100$$

$$\text{CTR} = 0.01 \times 100$$

$$\text{CTR} = 1\%$$
