

A Complete Guide To

Module 1: WEBSITE CREATION

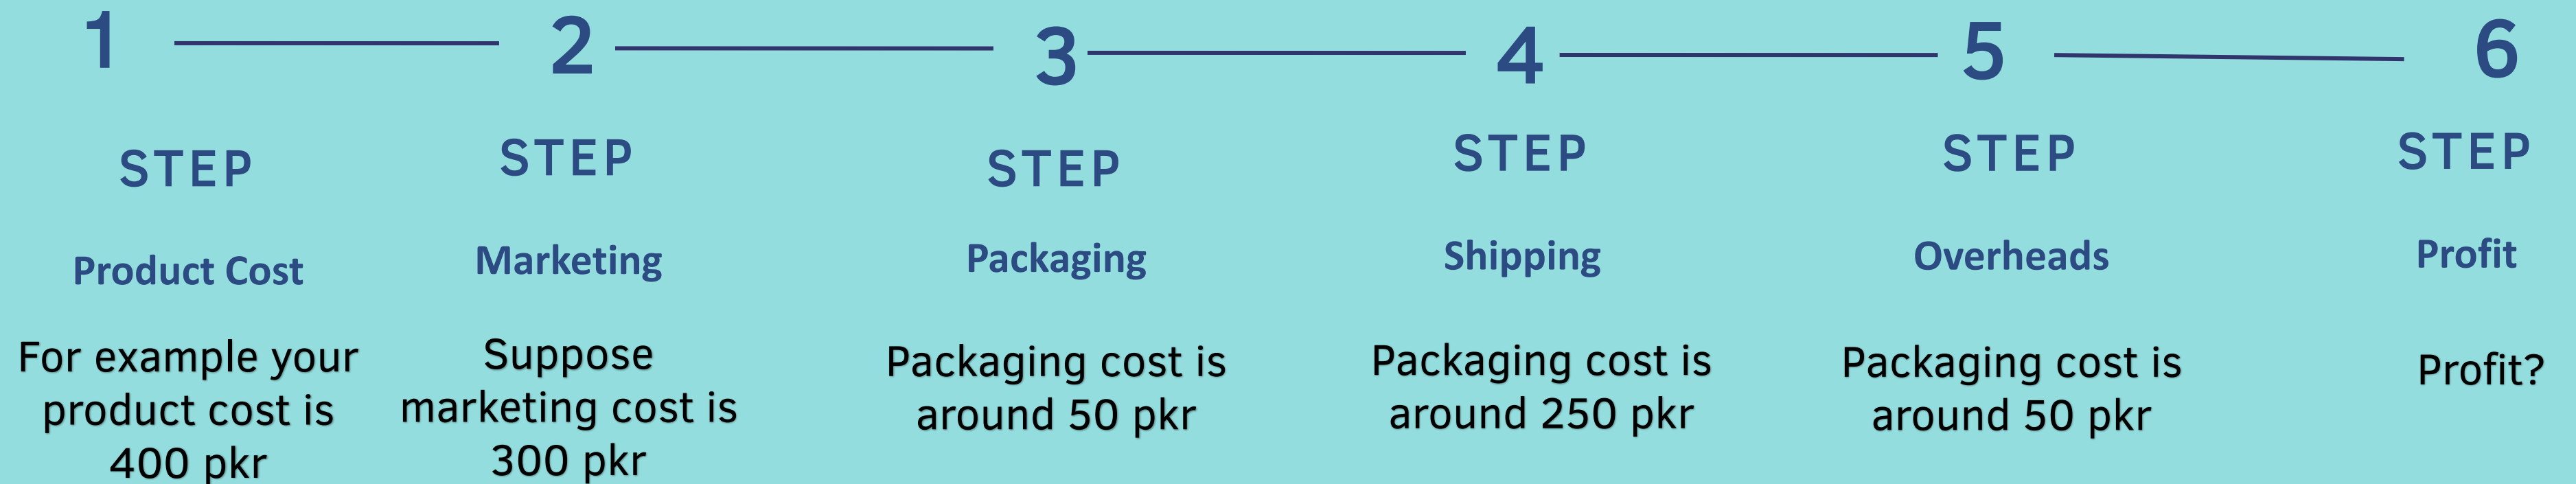

Agenda

KEY TOPICS DISCUSSED IN THIS PRESENTATION

- ☐ Understanding the Website Importance
- ☐ Understanding Website Basics
- ☐ Website Creation Tools
- ☐ Installing WordPress on Localhost using FlyWheel
- ☐ Install WordPress on Localhost using XAMPP
- ☐ Applying Security on Your Website Through Wordfence
- ☐ Installling Other Plugins
- ☐ Creating your Own Website

Pricing Formula

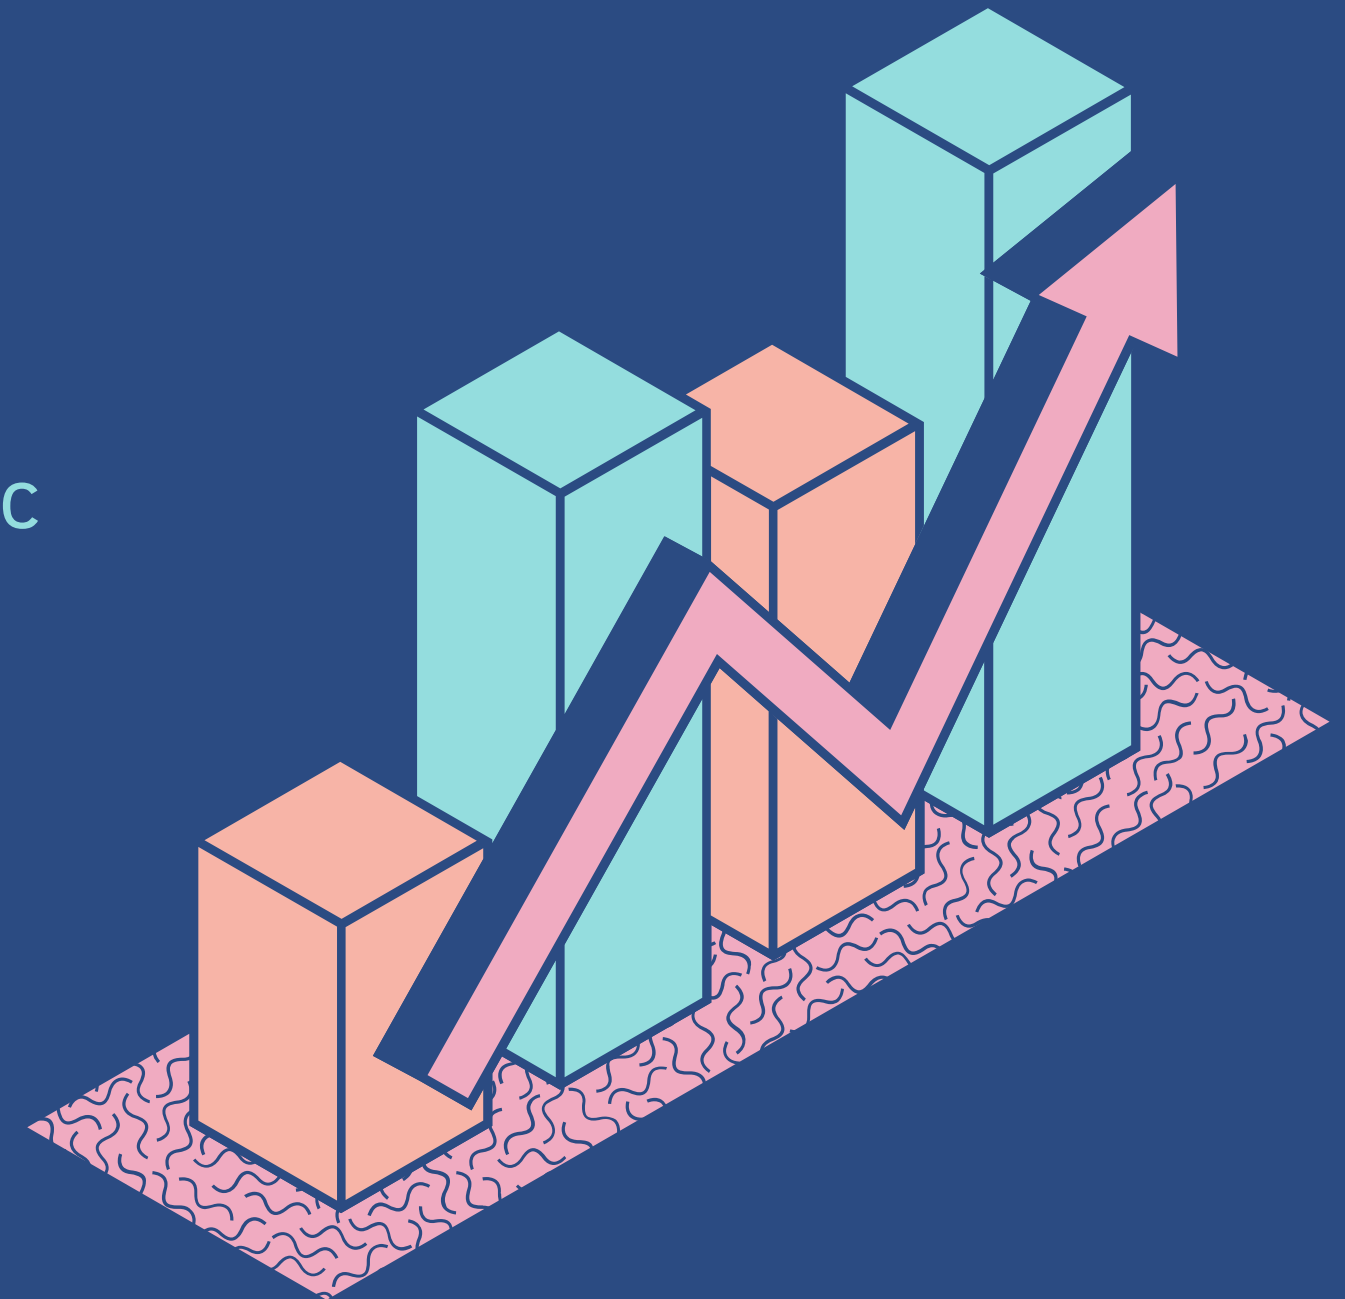

Product Cost + Marketing + Packaging + Shipping + Overheads + Profit = Selling Price

- If the profit is 50 then the entire selling cost is 1050/-
- A good business is where one can sell 100+ orders in a day
- Now the question here is who will buy 400 rupee thing in 2000? **Yes, we all are doing that.**

Brand vs Generic Domain Names

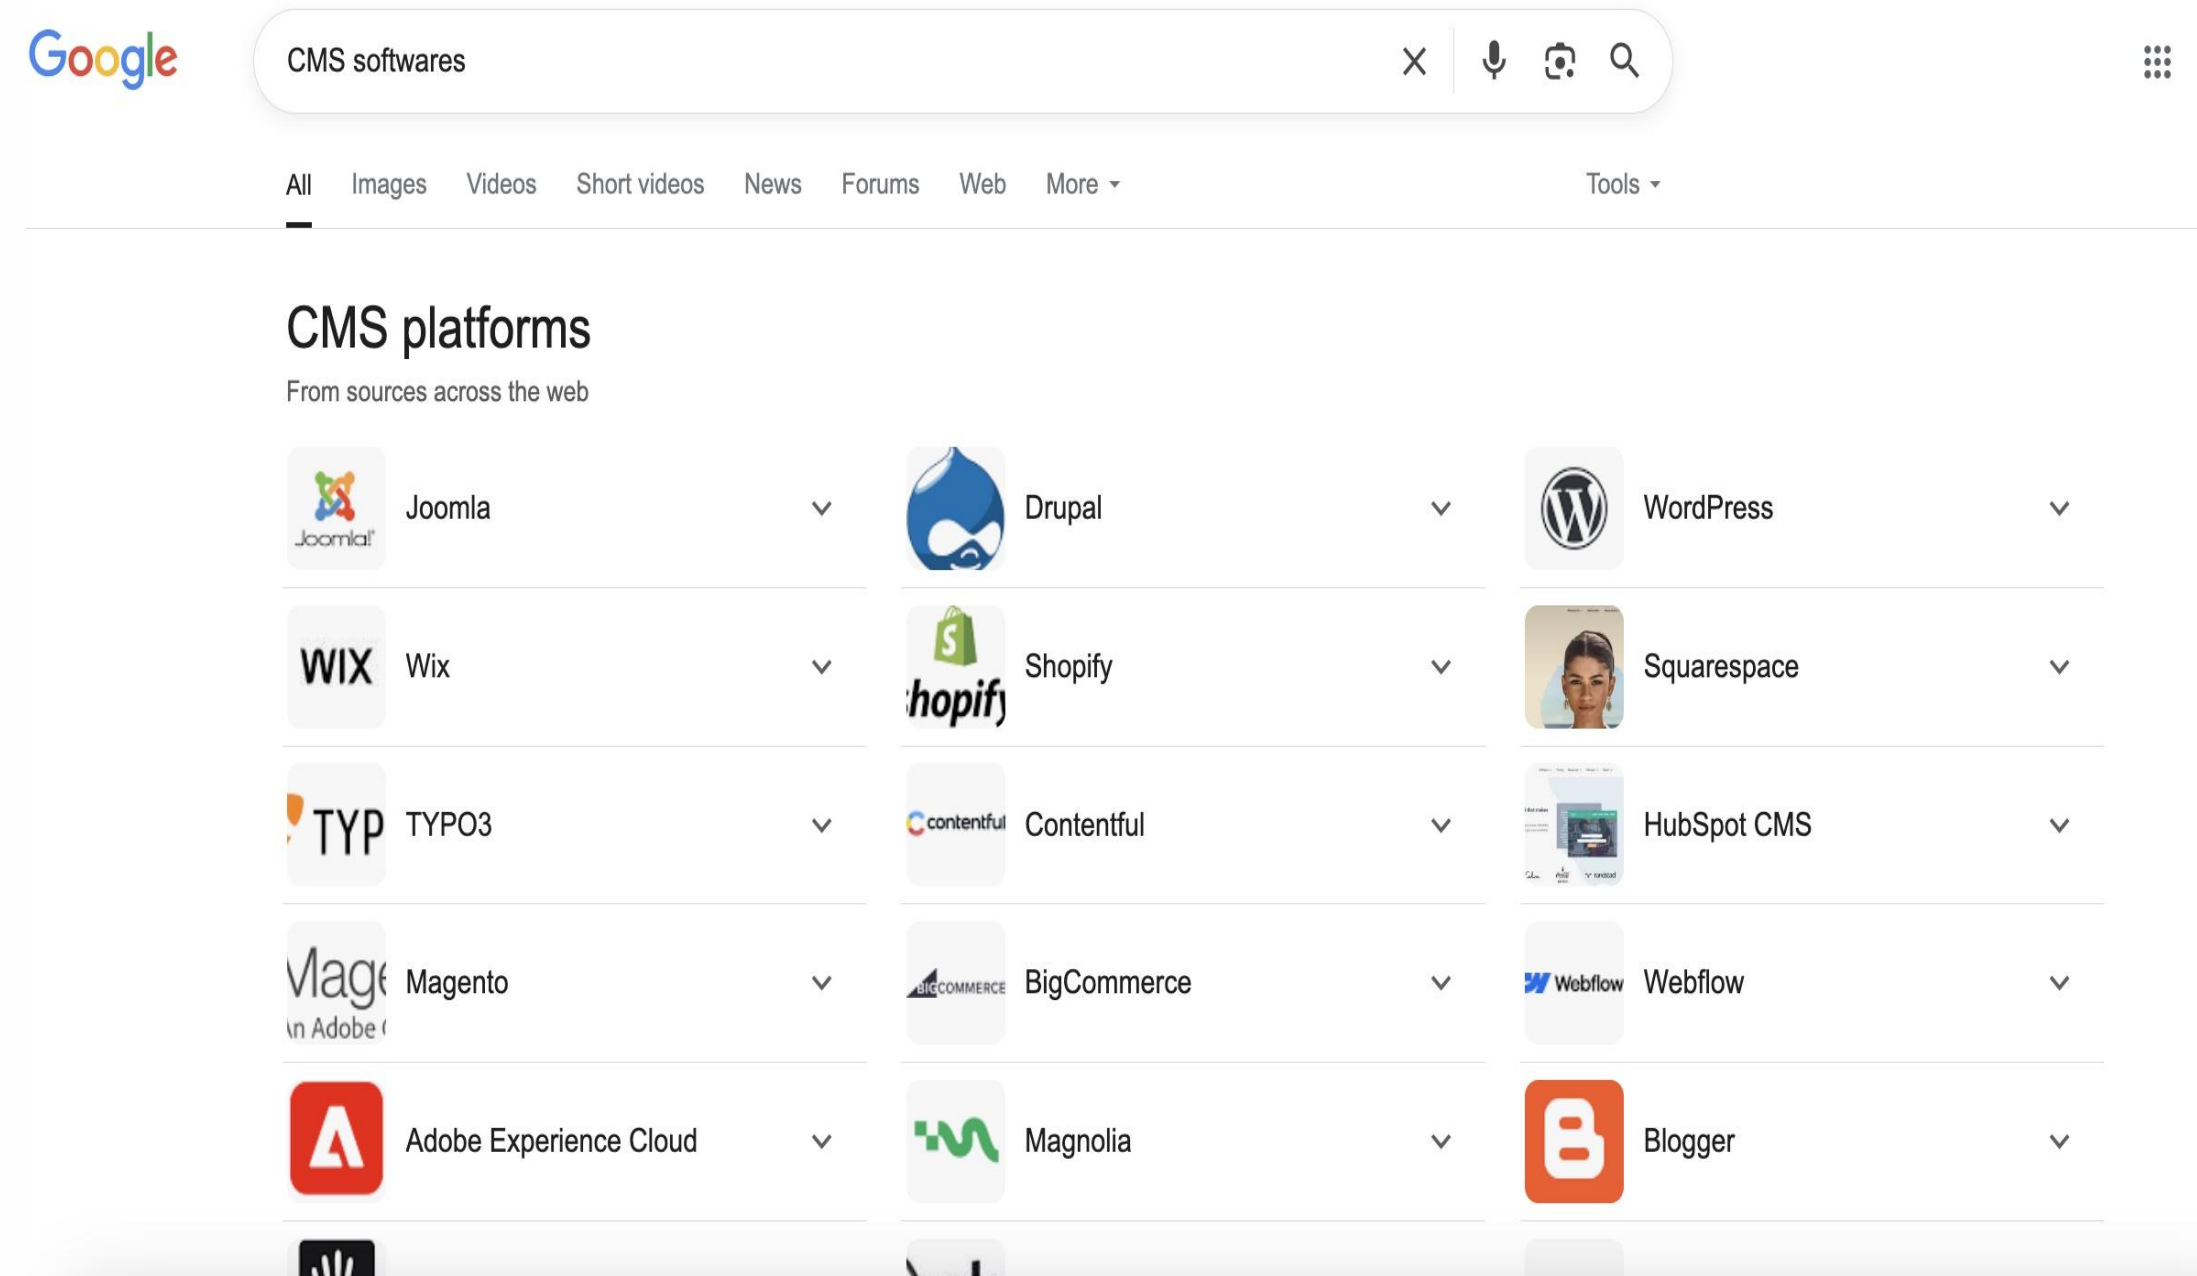

- Use branded domain names rather than generic ones
- For Example:
 - Generic: “ladiesbag.com”
 - Branded: “TIFMO, TEMFA, Darri Mooch”
- Branding helps in marketing and recognition

Content Management System (CMS)

- CMS allows you to build websites without coding everything manually
- Examples: Shopify, WordPress, WooCommerce (WordPress plugin for e-commerce)
- Shopify: E-commerce only
- WordPress: Versatile for any website type

Usage statistics and market shares of content management ...

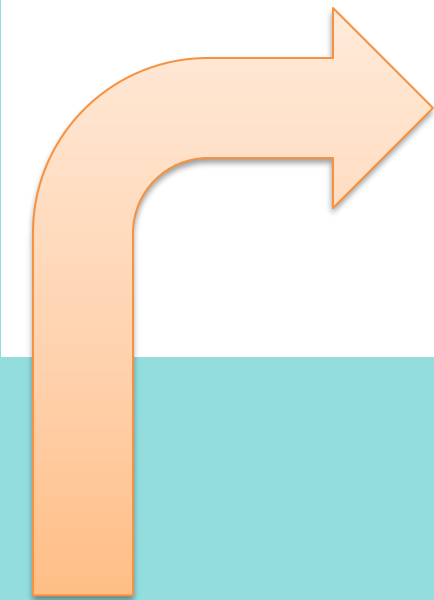

The following content management systems have a market share of less than 0.1%. Ticimax · WebSphere Studio · Newfold Digital Systems · Salesforce ...

Usage History

WordPress

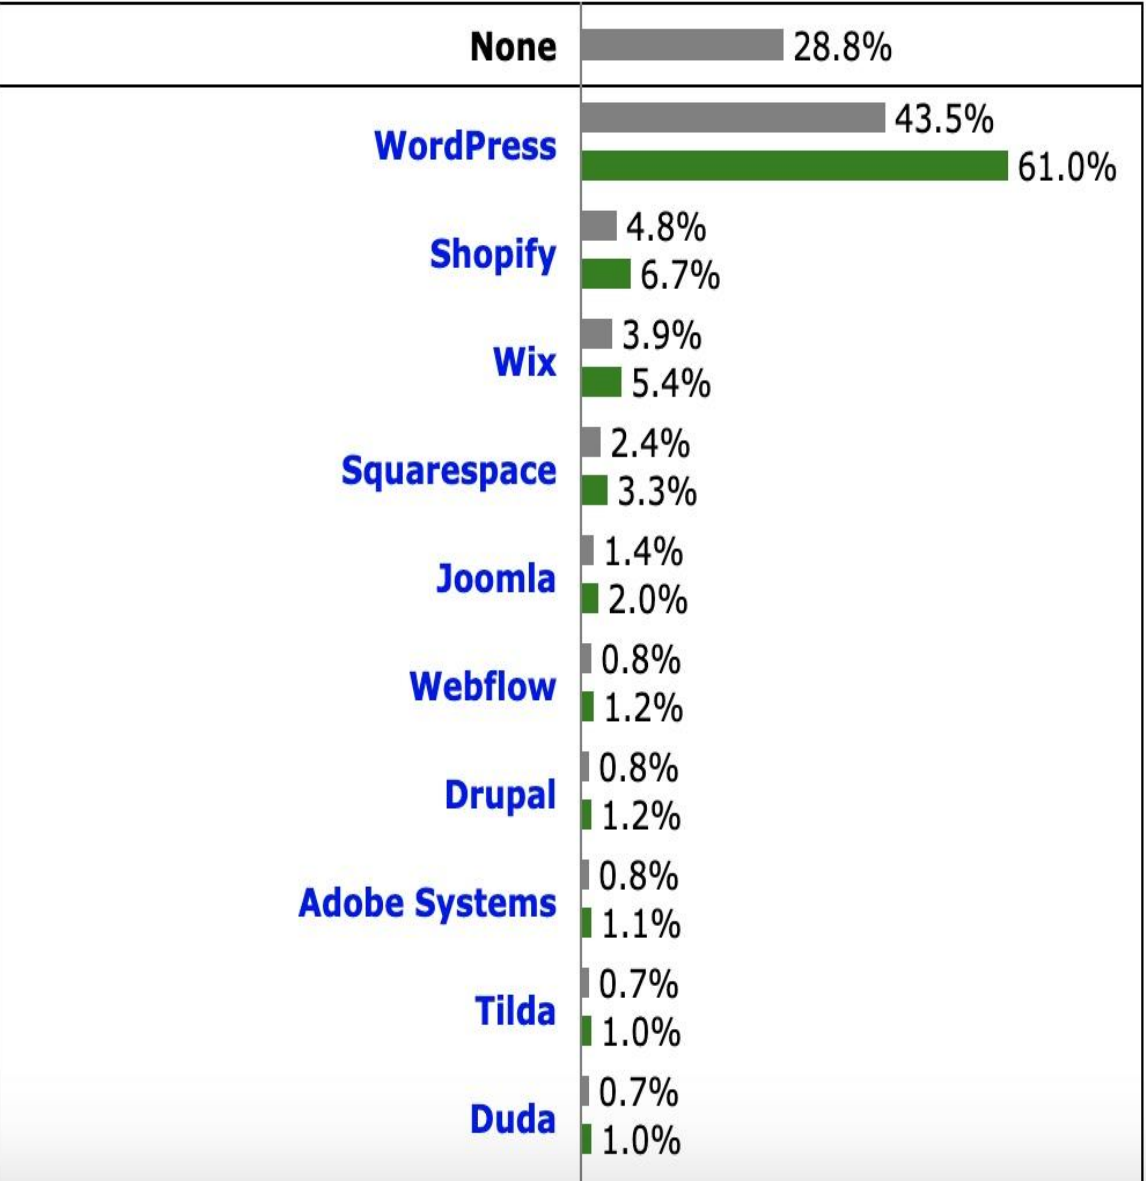

Craft CMS

October CMS

➤ CMS popularity: Check sites like W3Techs for stats

How to read the diagram:
28.8% of the websites use none of the content management systems that we monitor.
WordPress is used by 43.5% of all the websites, that is a content management system market share of 61.0%.

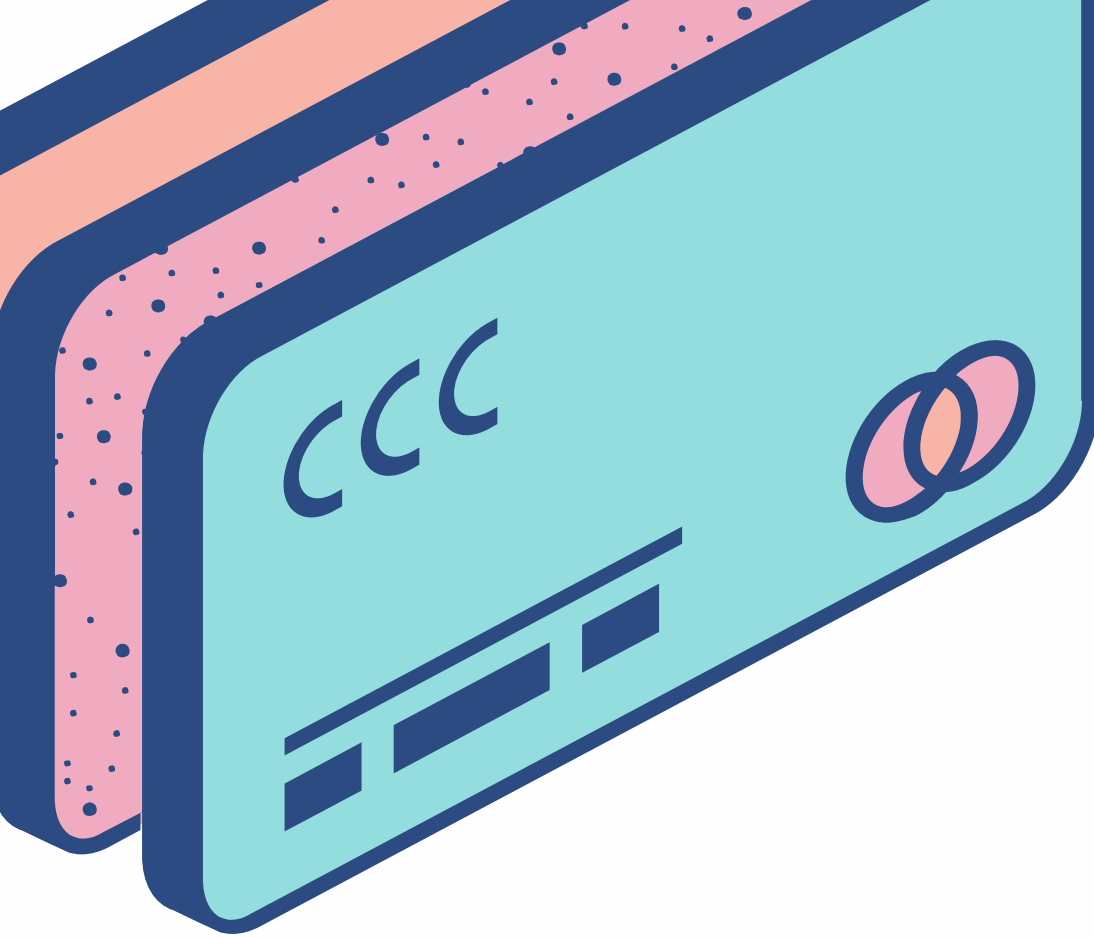

Myth About Shopify vs WordPress Sales

Shopify or WordPress don't guarantee sales

- ✓ Sales depend on marketing: social media, SEO, email marketing
- ✓ Learning WordPress first gives good foundation for Shopify later

Scenario 1

Client: I want to launch an e-commerce brand. Which platform should I use?

Developer: Shopify is best for e-commerce; it's user-friendly and popular.

Client: How much does Shopify cost?

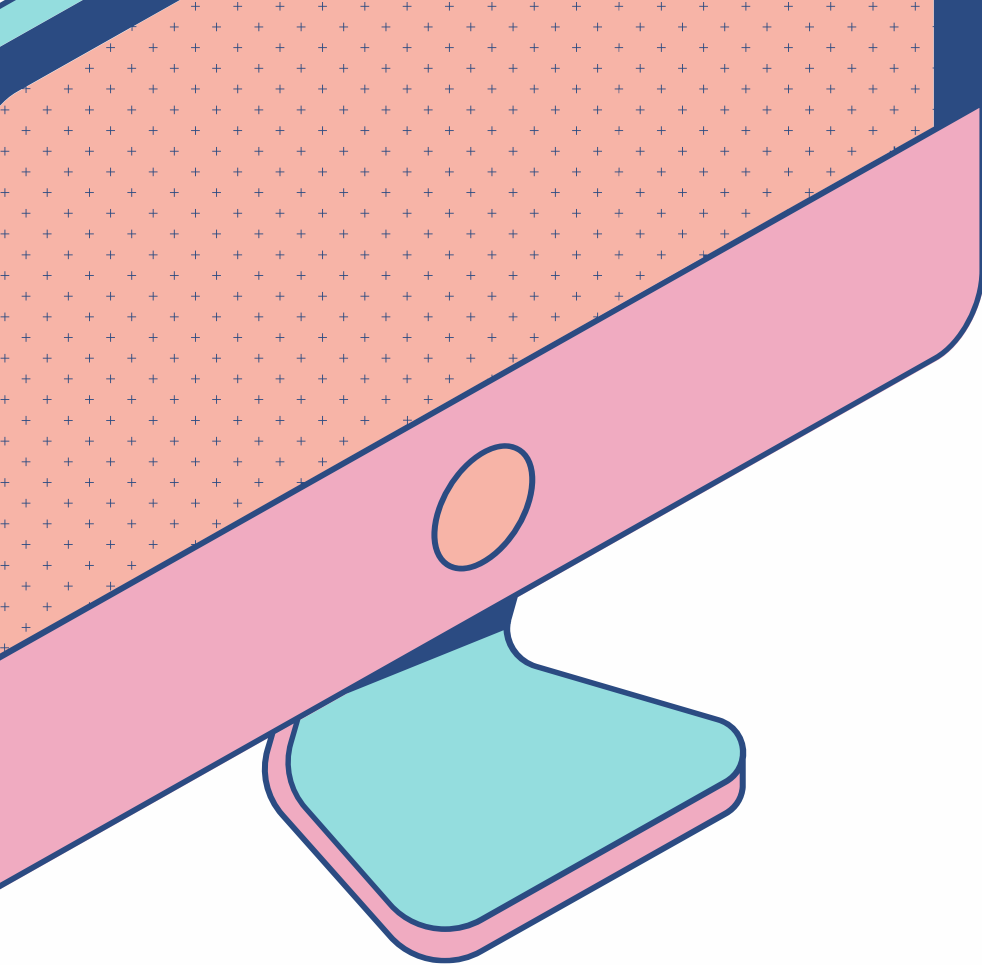

Developer: Plans start at \$25/month (subject to change). Check shopify.com/pricing for the latest info.

Domain & Hosting Pricing Comparison

Company	Price USD (1st Year)	Price PKR (1st Year)	Price USD (2nd Year)	Price PKR (2nd Year)
Bluehost	35.4	13,500	163	61,600
HostGator	45	17,100	92	35,000
Namecheap	28	10,600	62	23,500
TheBeeHost	45.2	12,656	45.2	12,656

Recommendation: Buy domain and hosting from the same company for convenience

After Buying Domain & Hosting — What Happens?

- You receive several important emails after purchase:
 - Order Activated / Order Received confirmation
 - Invoice Paid notification
 - Domain Registered confirmation
- Important: Buying a domain gives you ownership confirmation, not login credentials
- Think of a domain like a plot of land — you get proof of ownership, not a key
- Hosting purchase is different — you do get login details (username & password) to manage your website.

Understanding Your Hosting Account Details

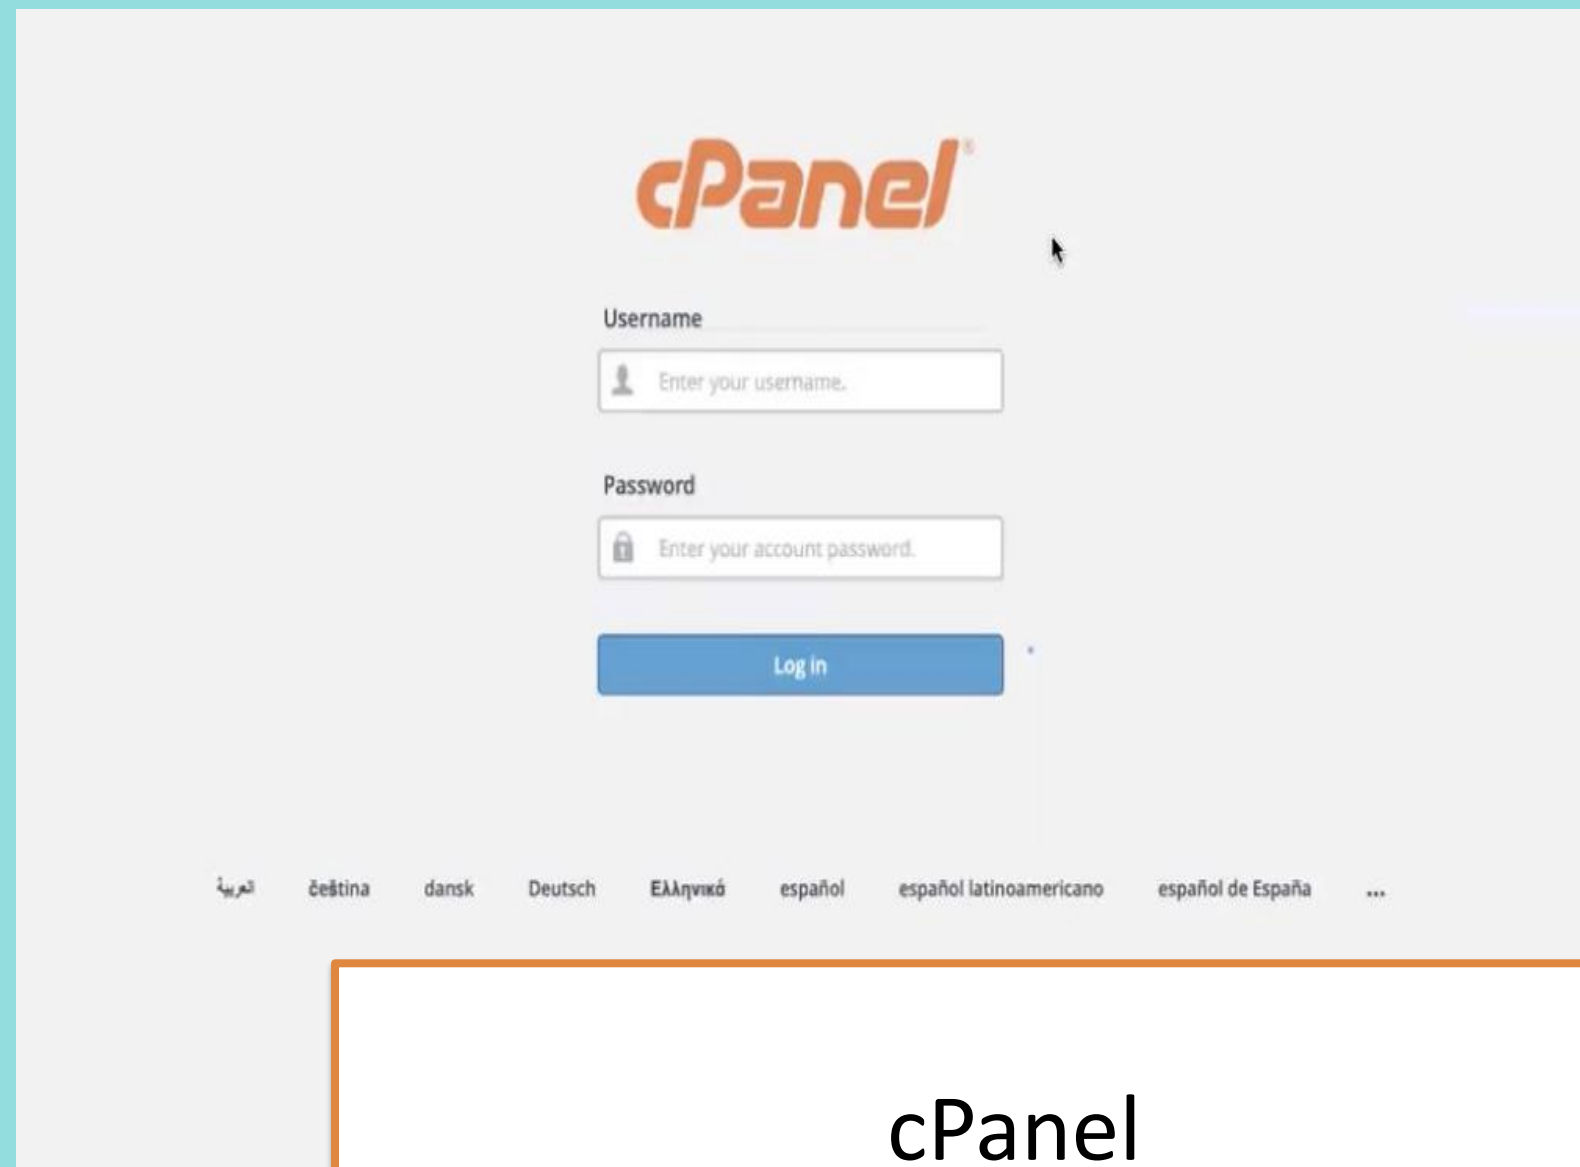

➤ After buying hosting, you receive:

- ✓ Hosting account username and password
- ✓ Web Control Panel URL to manage your hosting (e.g., cPanel or DirectAdmin)
- ✓ DNS information for domain pointing and email setup

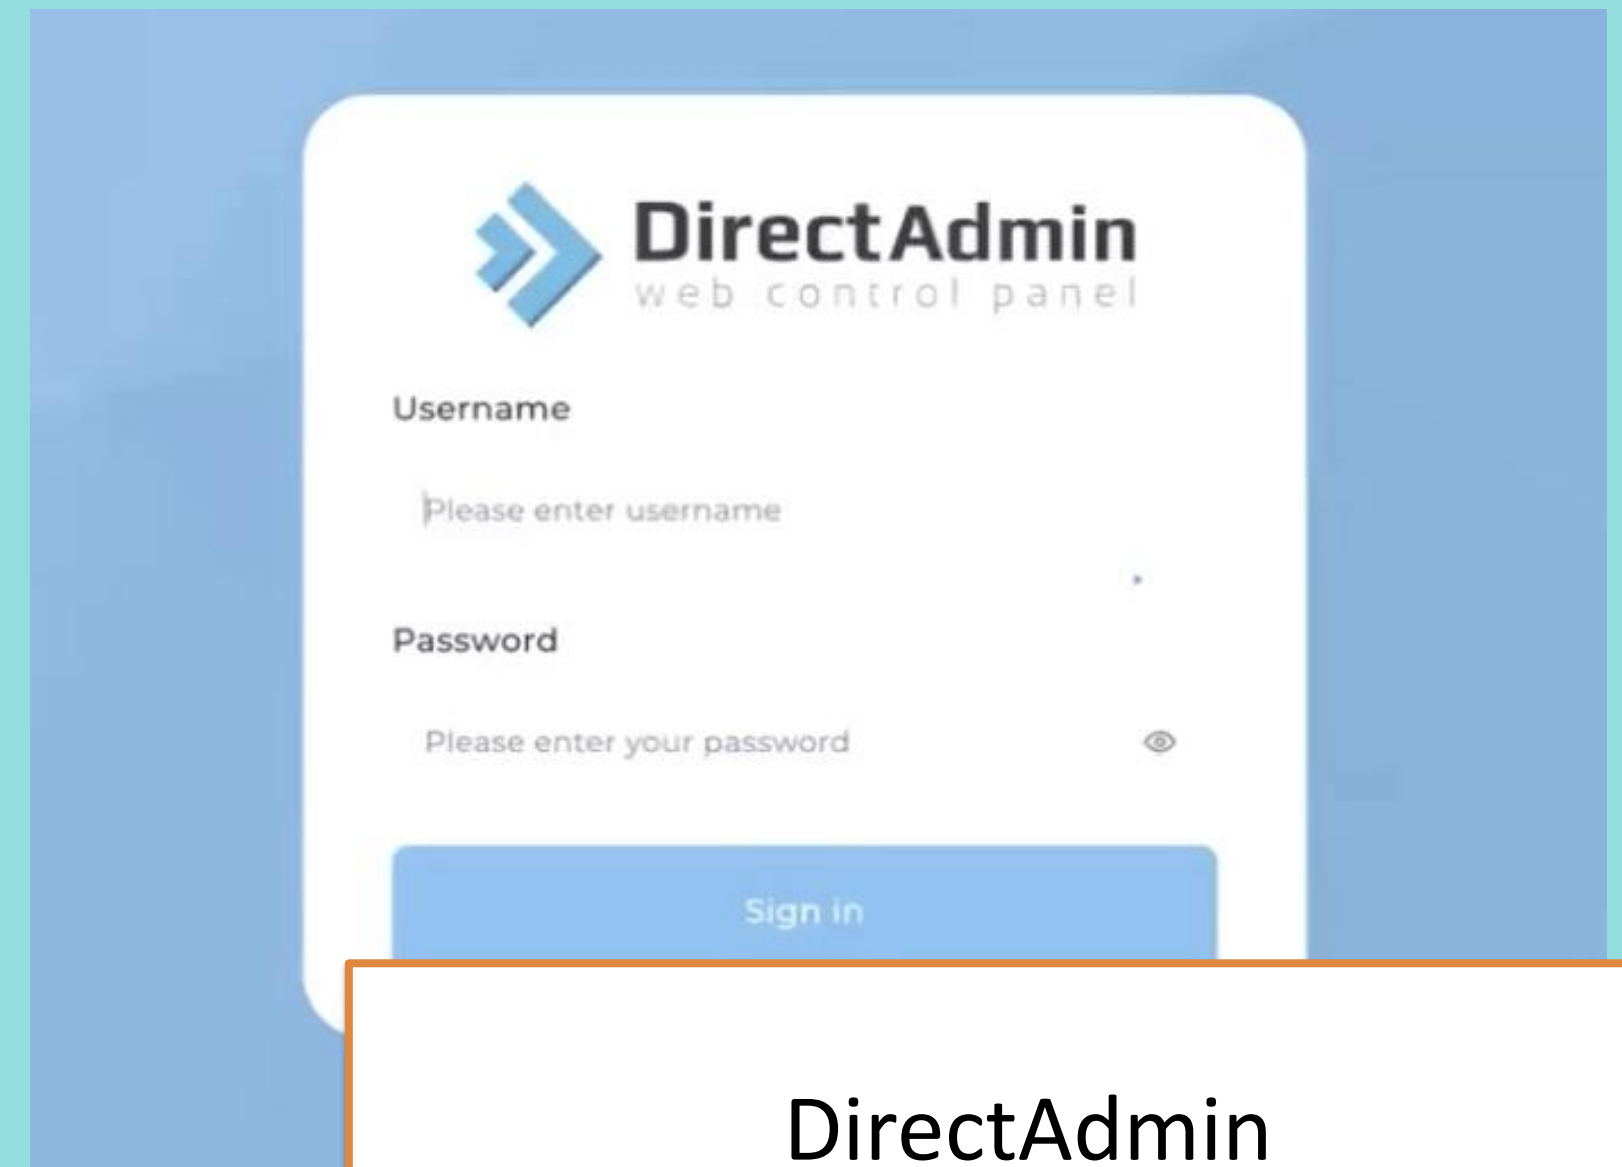

➤ The Web Control Panel is your main dashboard to:

- ✓ Upload/manage website files
- ✓ Create domain email accounts
- ✓ Install software like WordPress
- ✓ Manage security and backups
- ✓ Control panel URLs can be numerical IP addresses or domain-based (e.g., 192.168.1.1:2082 OR learnwithnimra.com:2082)

cPanel

DirectAdmin

Key Takeaways & Security Tips

- ❖ Domains do not provide direct login credentials — only proof of ownership
- ❖ Hosting gives you the actual access to manage your website through a control panel
- ❖ Use the control panel regularly to maintain your website, emails, and security settings
- ❖ Keep your hosting username, password, and control panel URL safe and confidential
- ❖ Save all emails from your hosting provider — they contain critical info for managing your site

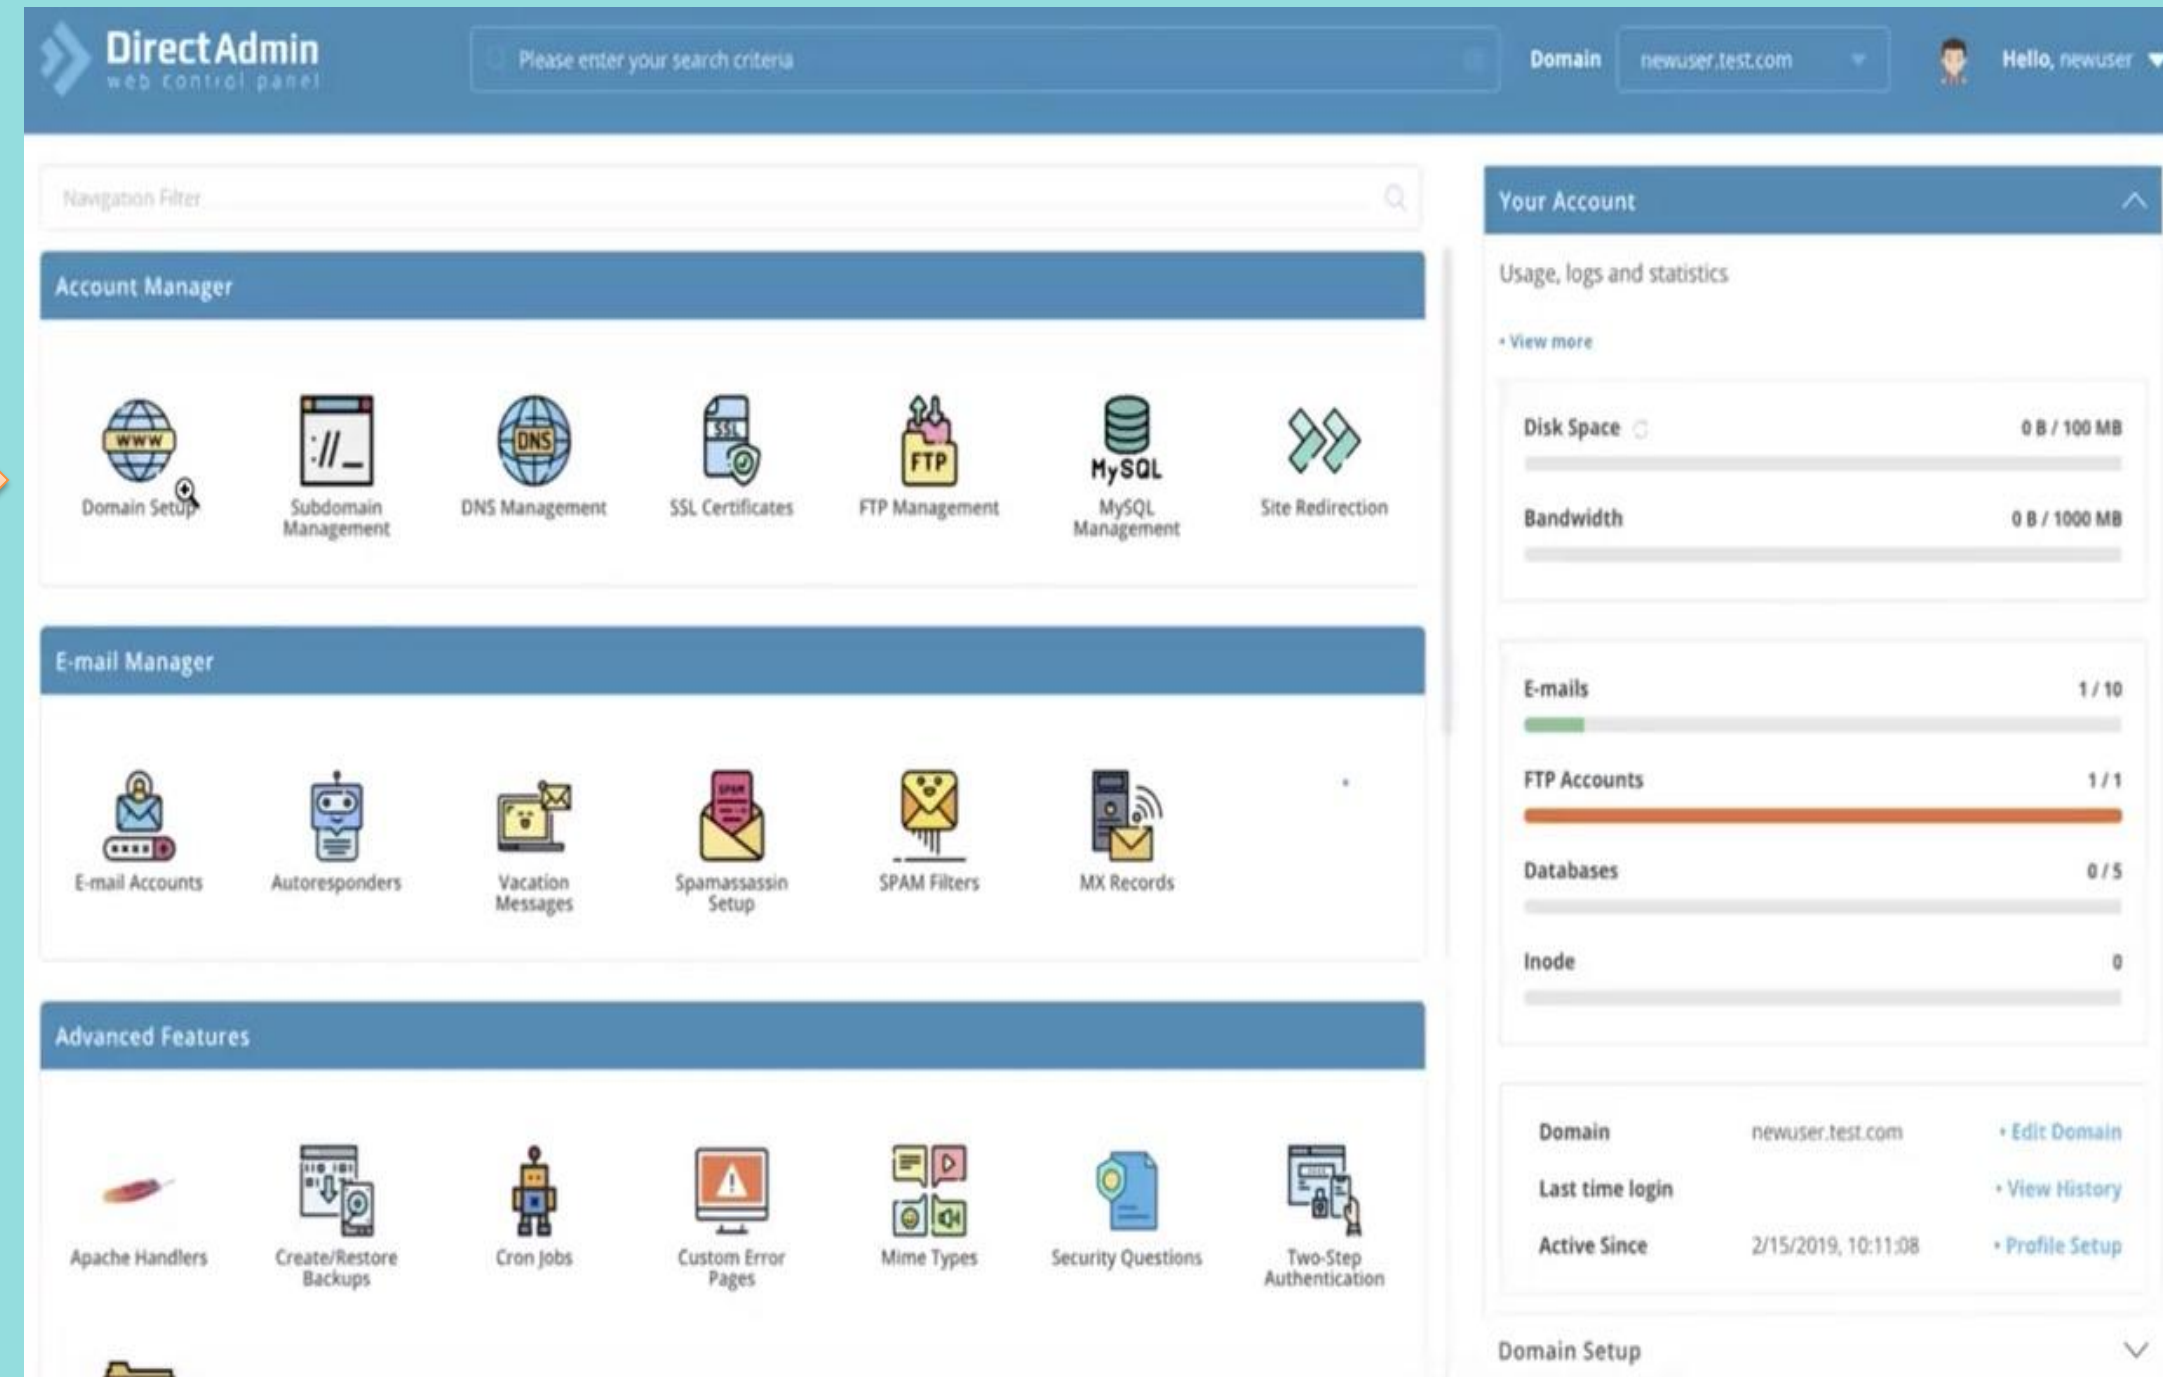

Logging into cPanel & Main Dashboard

- **Login:** Enter the credentials emailed by your hosting provider
- **Dashboard Overview:**
 - **File Manager:** Upload/download files
 - **Disk Usage:** View space consumption
 - **Backups:** Manage site backups
 - **Support:** Access help tickets or knowledge base
 - **Images:** Browse and optimize media
 - **Addon Domains:** Attach additional domains, and many other options

The screenshot displays the cPanel dashboard interface. On the left is a dark sidebar with the cPanel logo and a list of tools: Tools, SiteJet Builder, WP Toolkit, and WordPress Manager by Softaculous. The main content area is titled 'Tools' and is divided into two sections: 'Files' and 'Email'. The 'Files' section includes icons for File Manager, Disk Usage, Backup, JetBackup 5, Images, Web Disk, Backup Wizard, Directory Privacy, FTP Accounts, and Git™ Version Control. The 'Email' section includes icons for Email Accounts, Forwarders, Email Routing, Autoresponders, Default Address, Mailing Lists, Track Delivery, Global Email Filters, Email Filters, Email Deliverability, Address Importer, Spam Filters, Encryption, and Email Disk Usage. On the right side of the dashboard, there is a 'General Information' panel showing details for the current user 'learnwi1', including the primary domain 'learnwithhamiz.com', shared IP address '199.26.84.21', home directory '/home2/learnwi1', last login IP address '39.47.39.20', and user analytics ID. Below this is a 'Theme' dropdown set to 'jupiter' and a 'Server Information' link. At the bottom right, a 'Statistics' panel shows 'Subdomains: 20 / 20 (100%)'.

Logging into DirectAdmin & Main Dashboard

- **Login:** Use the same credentials from your provider
- **Dashboard Overview:**
 - Very similar feature set (File Manager, Backups, Domain Manager, etc.)
- **Key Difference:** Only the look & layout change—functionality is identical to cPanel

Now tell me !

You have your **phone** in one hand and a **charger** in the other. You plug the charger directly into the phone—does it charge?

DNS Analogy – Why It Doesn't Charge

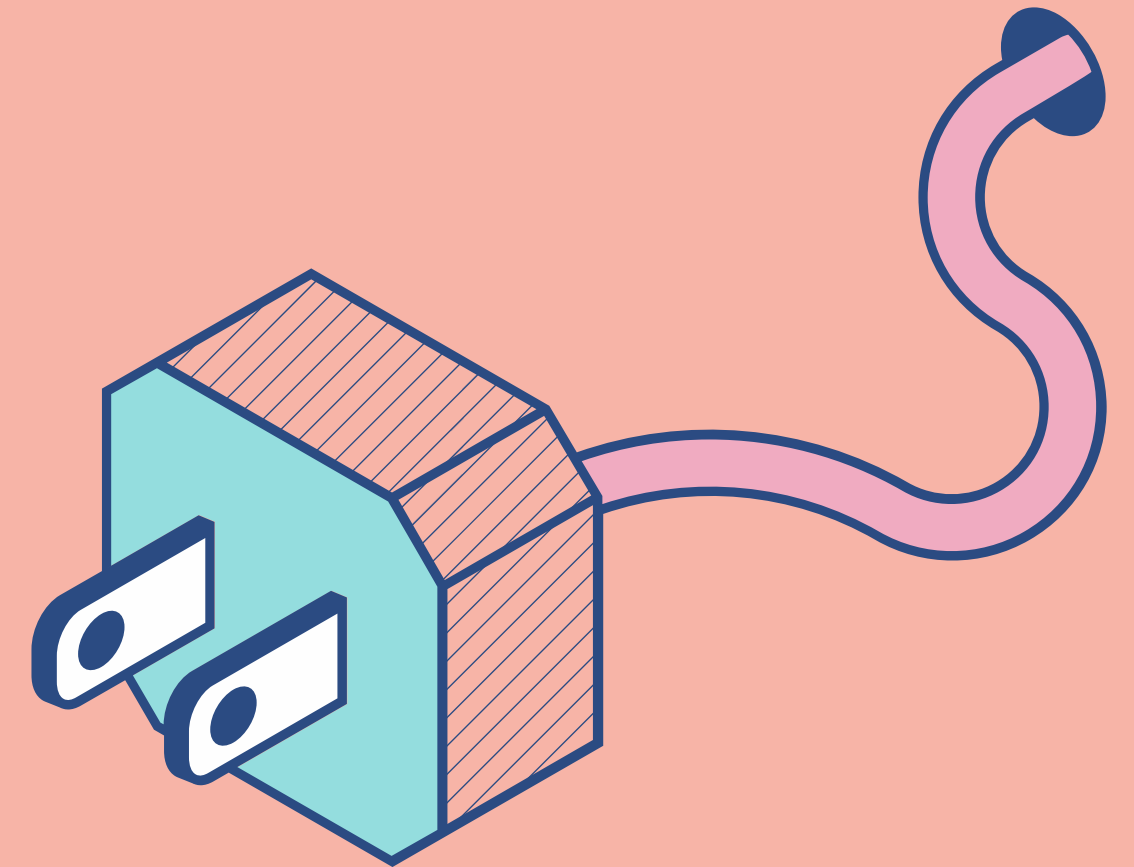

Answer: No - it needs a power socket in between

So just like:

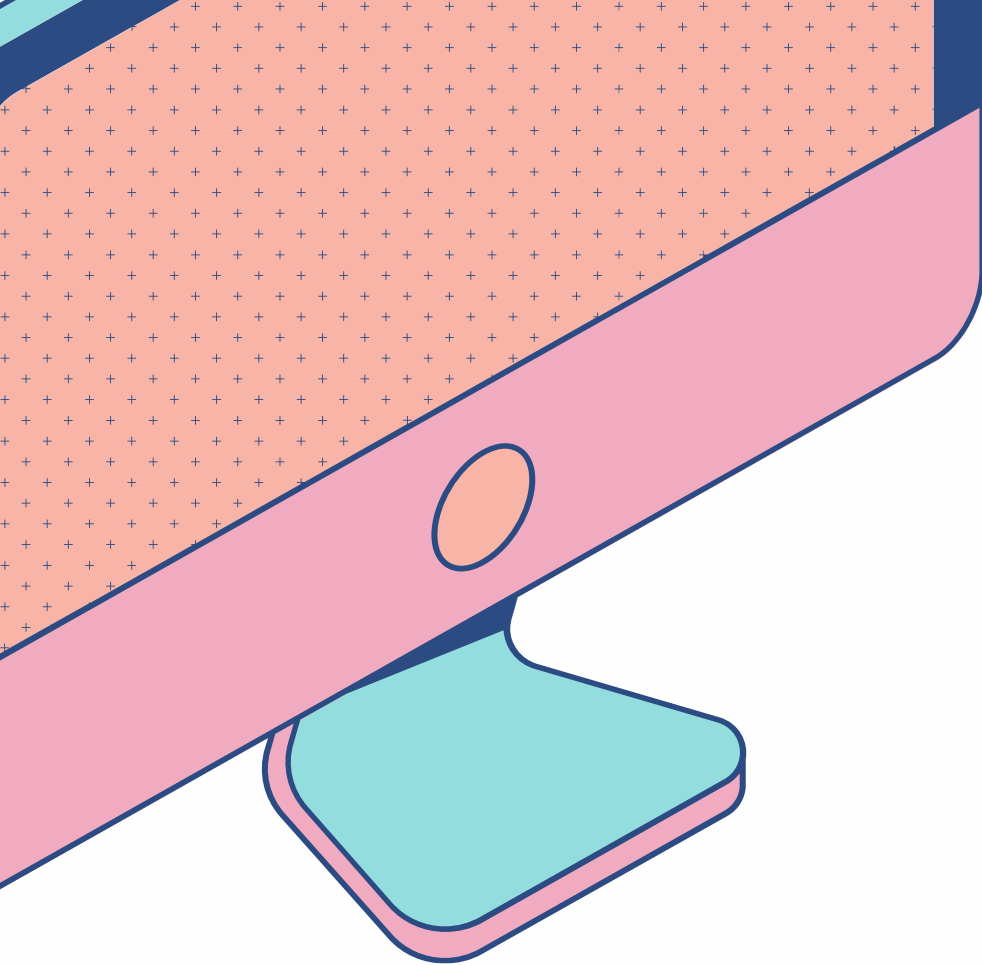

Socket — charger — mobile = charging

Same is the case with website:

Domain — DNS — Hosting = live website

Takeaway: DNS acts as the “socket,” linking your domain to your hosting

What DNS Looks Like?

- Every DNS record comes in pairs (minimum two; can have 3–6+)
- Examples:
 - ns1.thebeehost.com & ns2.thebeehost.com
 - dns1.namecheaphosting.com & dns2.namecheaphosting.com
 - ns1.hostgator.com & ns2.hostgator.com
- Note: You only need to enter the ones your provider gave you

Practical DNS Setup Steps

- Gather your DNS from hosting provider: e.g.
 - ✓ ns1.thebeehost.com
 - ✓ ns2.thebeehost.com
- Log in to your domain registrar:
 - ✓ Use the same client-area credentials you set up before buying hosting
 - ✓ Here you will see a Domain option, go to Domains and then **Active Domains**
 - ✓ Now the next step is to select your domain and then pick the option **Nameservers**
 - ✓ Now enter only the provided **DNS** and click on **Save**

Wordpress Guide

Introduction to WordPress

- Two “flavors”:
 - WordPress.org (self-hosted, free to customize)
 - WordPress.com (hosted service, monthly fees, limited control)

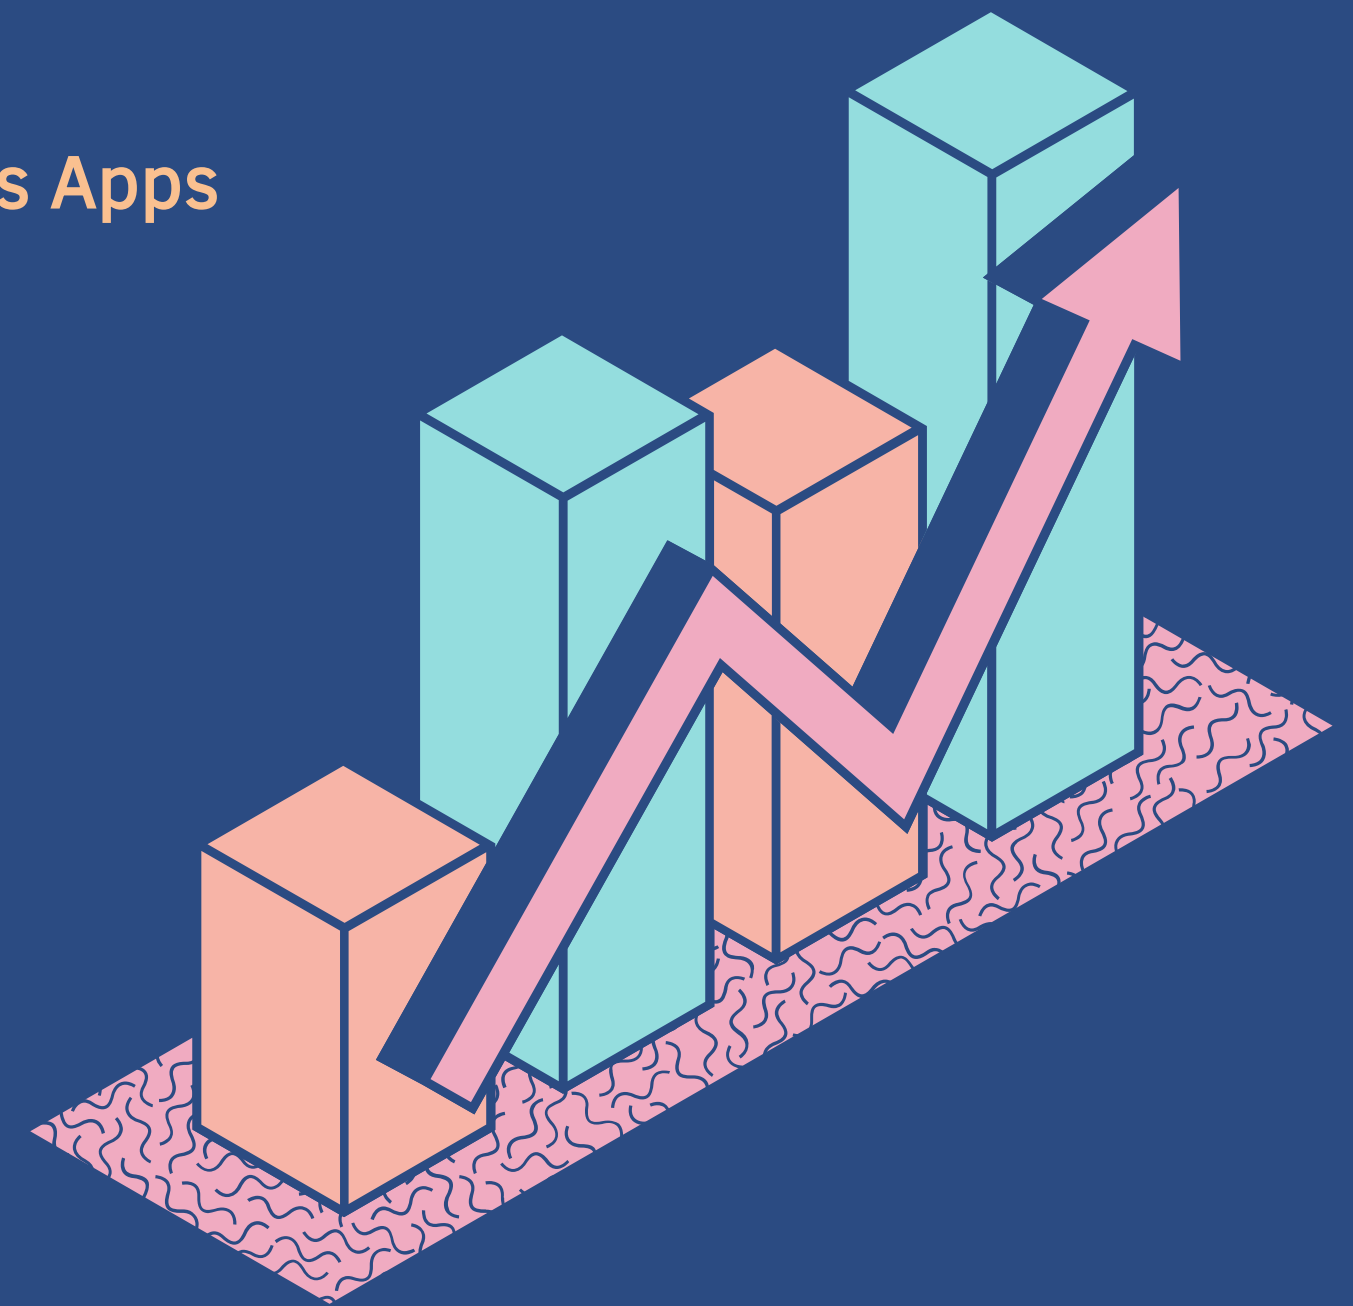

Downloading WordPress.org

- Go to: wordpress.org → Get WordPress
- Click Download: software ZIP will save to your system
- Cost: WordPress.org itself is free; you only pay for the domain and hosting

One-Click Install via cPanel / DirectAdmin

- Open **cPanel/DirectAdmin** (via link in your email)
- Locate **“WordPress Manager by Softaculous”** or **“Softaculous Apps Installer”**
- Choose **WordPress** and Fill in the form:
 - ✓ Site name, admin username & password, desired directory
- After this, click Install → **Success!**

The image is a screenshot of a web browser displaying the Softaculous WordPress installation success page. On the left, there is a dark sidebar with a search icon and a list of software categories: "id Web", "als/CMS", "Forums", "Image Galleries", "Wikis", "Social Networking", "Ad Management", "Calendars", "Gaming", "Mails", "Polls and Analytics", "Project Management", "E-Commerce", "ERP", "Guest Books", "Customer Support", and "Frameworks". Each category has a right-pointing arrow. The main content area has a top navigation bar with links for "PHP", "JavaScripts", and "PERL". Below this, the WordPress logo is shown next to the text "WordPress" and five stars. The version number "6.5.5, 6.4.5, 6.3.5, 6.2.6, 6.1.7, 6.0.9, 5.9.10, 5.8.10, 5.7.12, 5.6.14, 5.5.15, 5.4.16, 5.3.18, 5.2.21, 5.1.19, 5.0.22, 4.9.26" and the release date "24-06-2024" are listed. A blue "Install" button is highlighted, followed by links for "Overview", "Features", "Screenshots", "Demo", "Ratings", "Reviews", and "Import". The main heading reads "Congratulations, the software was installed successfully". Below this, it states "WordPress has been successfully installed at : https://learnwithhamiz.com" and "Administrative URL : https://learnwithhamiz.com/wp-admin/". A message says "We hope the installation process was easy." followed by a "NOTE" about Softaculous not providing support. The page ends with "Regards, Softaculous Auto Installer" and two buttons: "Return to WordPress Management" and "Return to Overview". At the bottom, there is a section titled "Tell your friends about your new site :" with a text box containing "I just installed #WordPress on https://learnwithhamiz.com via #Softaculous #PHP". The browser's address bar shows "https://softaculous.com/wordpress-installation-success/?lang=en" and the page title is "WordPress - Softaculous".
