

A Complete Guide To

Module 1: WEBSITE CREATION

Agenda

KEY TOPICS DISCUSSED IN THIS PRESENTATION

- ☐ Understanding the Website Importance
- ☐ Understanding Website Basics
- ☐ Website Creation Tools
- ☐ Installing WordPress on Localhost using FlyWheel
- ☐ Install WordPress on Localhost using XAMPP
- ☐ Applying Security on Your Website Through Wordfence
- ☐ Installling Other Plugins
- ☐ Creating your Own Website

Localhost Practice Options

- ☐ When you don't have live hosting/domain:
 - ✓ Local by Flywheel (easiest)
 - ✓ XAMPP + WordPress manual install
- ☐ Both let you spin up a Wordpress site entirely on your own computer before going live

Installing WordPress on Localhost using FlyWheel

Step 1

Navigate to Local WP

1. Open your browser and search for Local WP
2. Click the LocalWP website link

Local wp

localwp.com

https://localwp.com

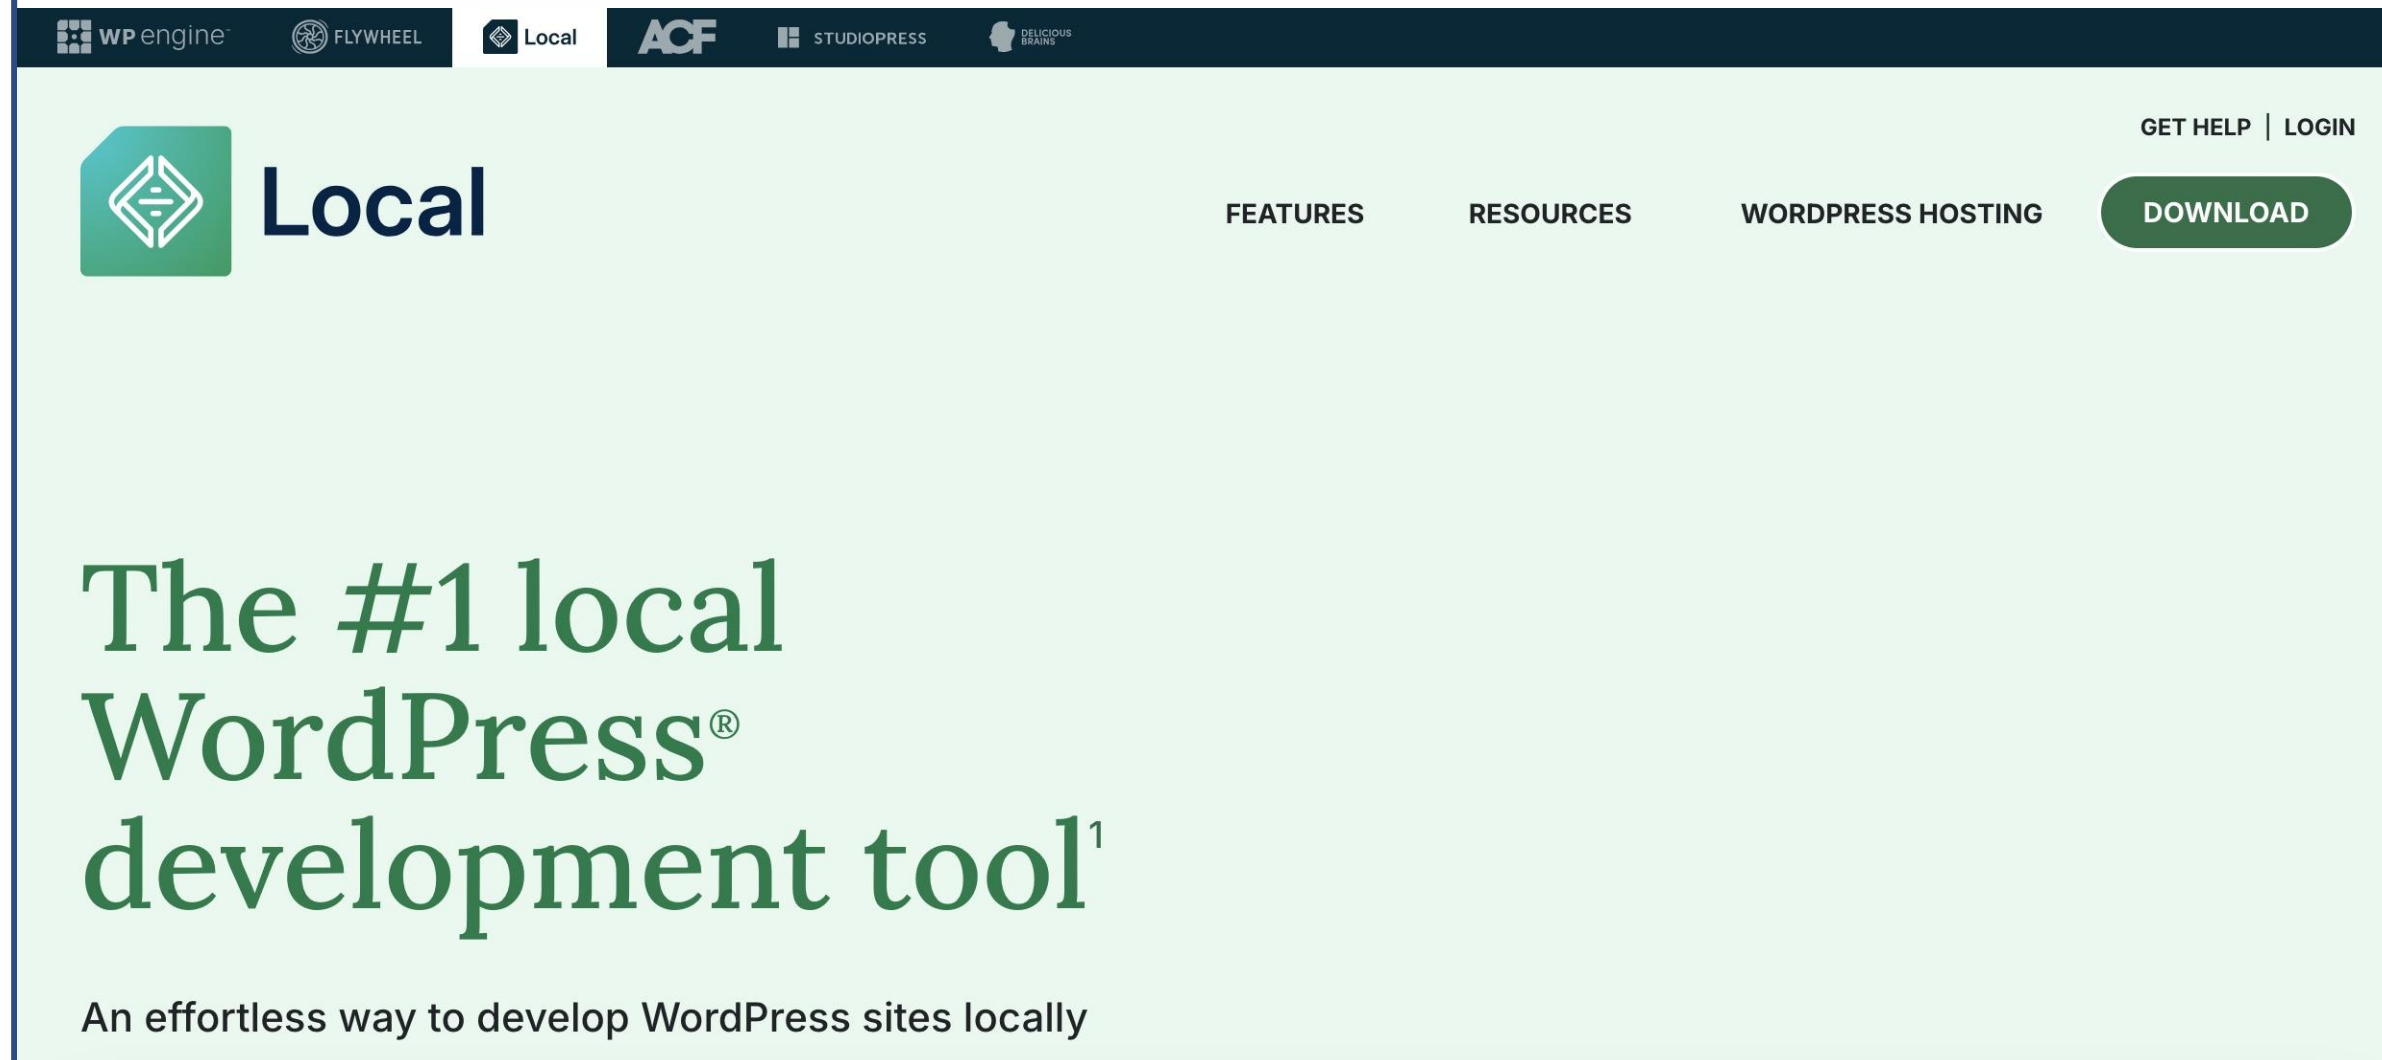

Local WP

The #1 **local** WordPress® development tool · Empowering developers with advance
Hear from the **Local** community · Discover a better way to ...

Step 2

Download Local

1. On the LocalWP homepage, click Download

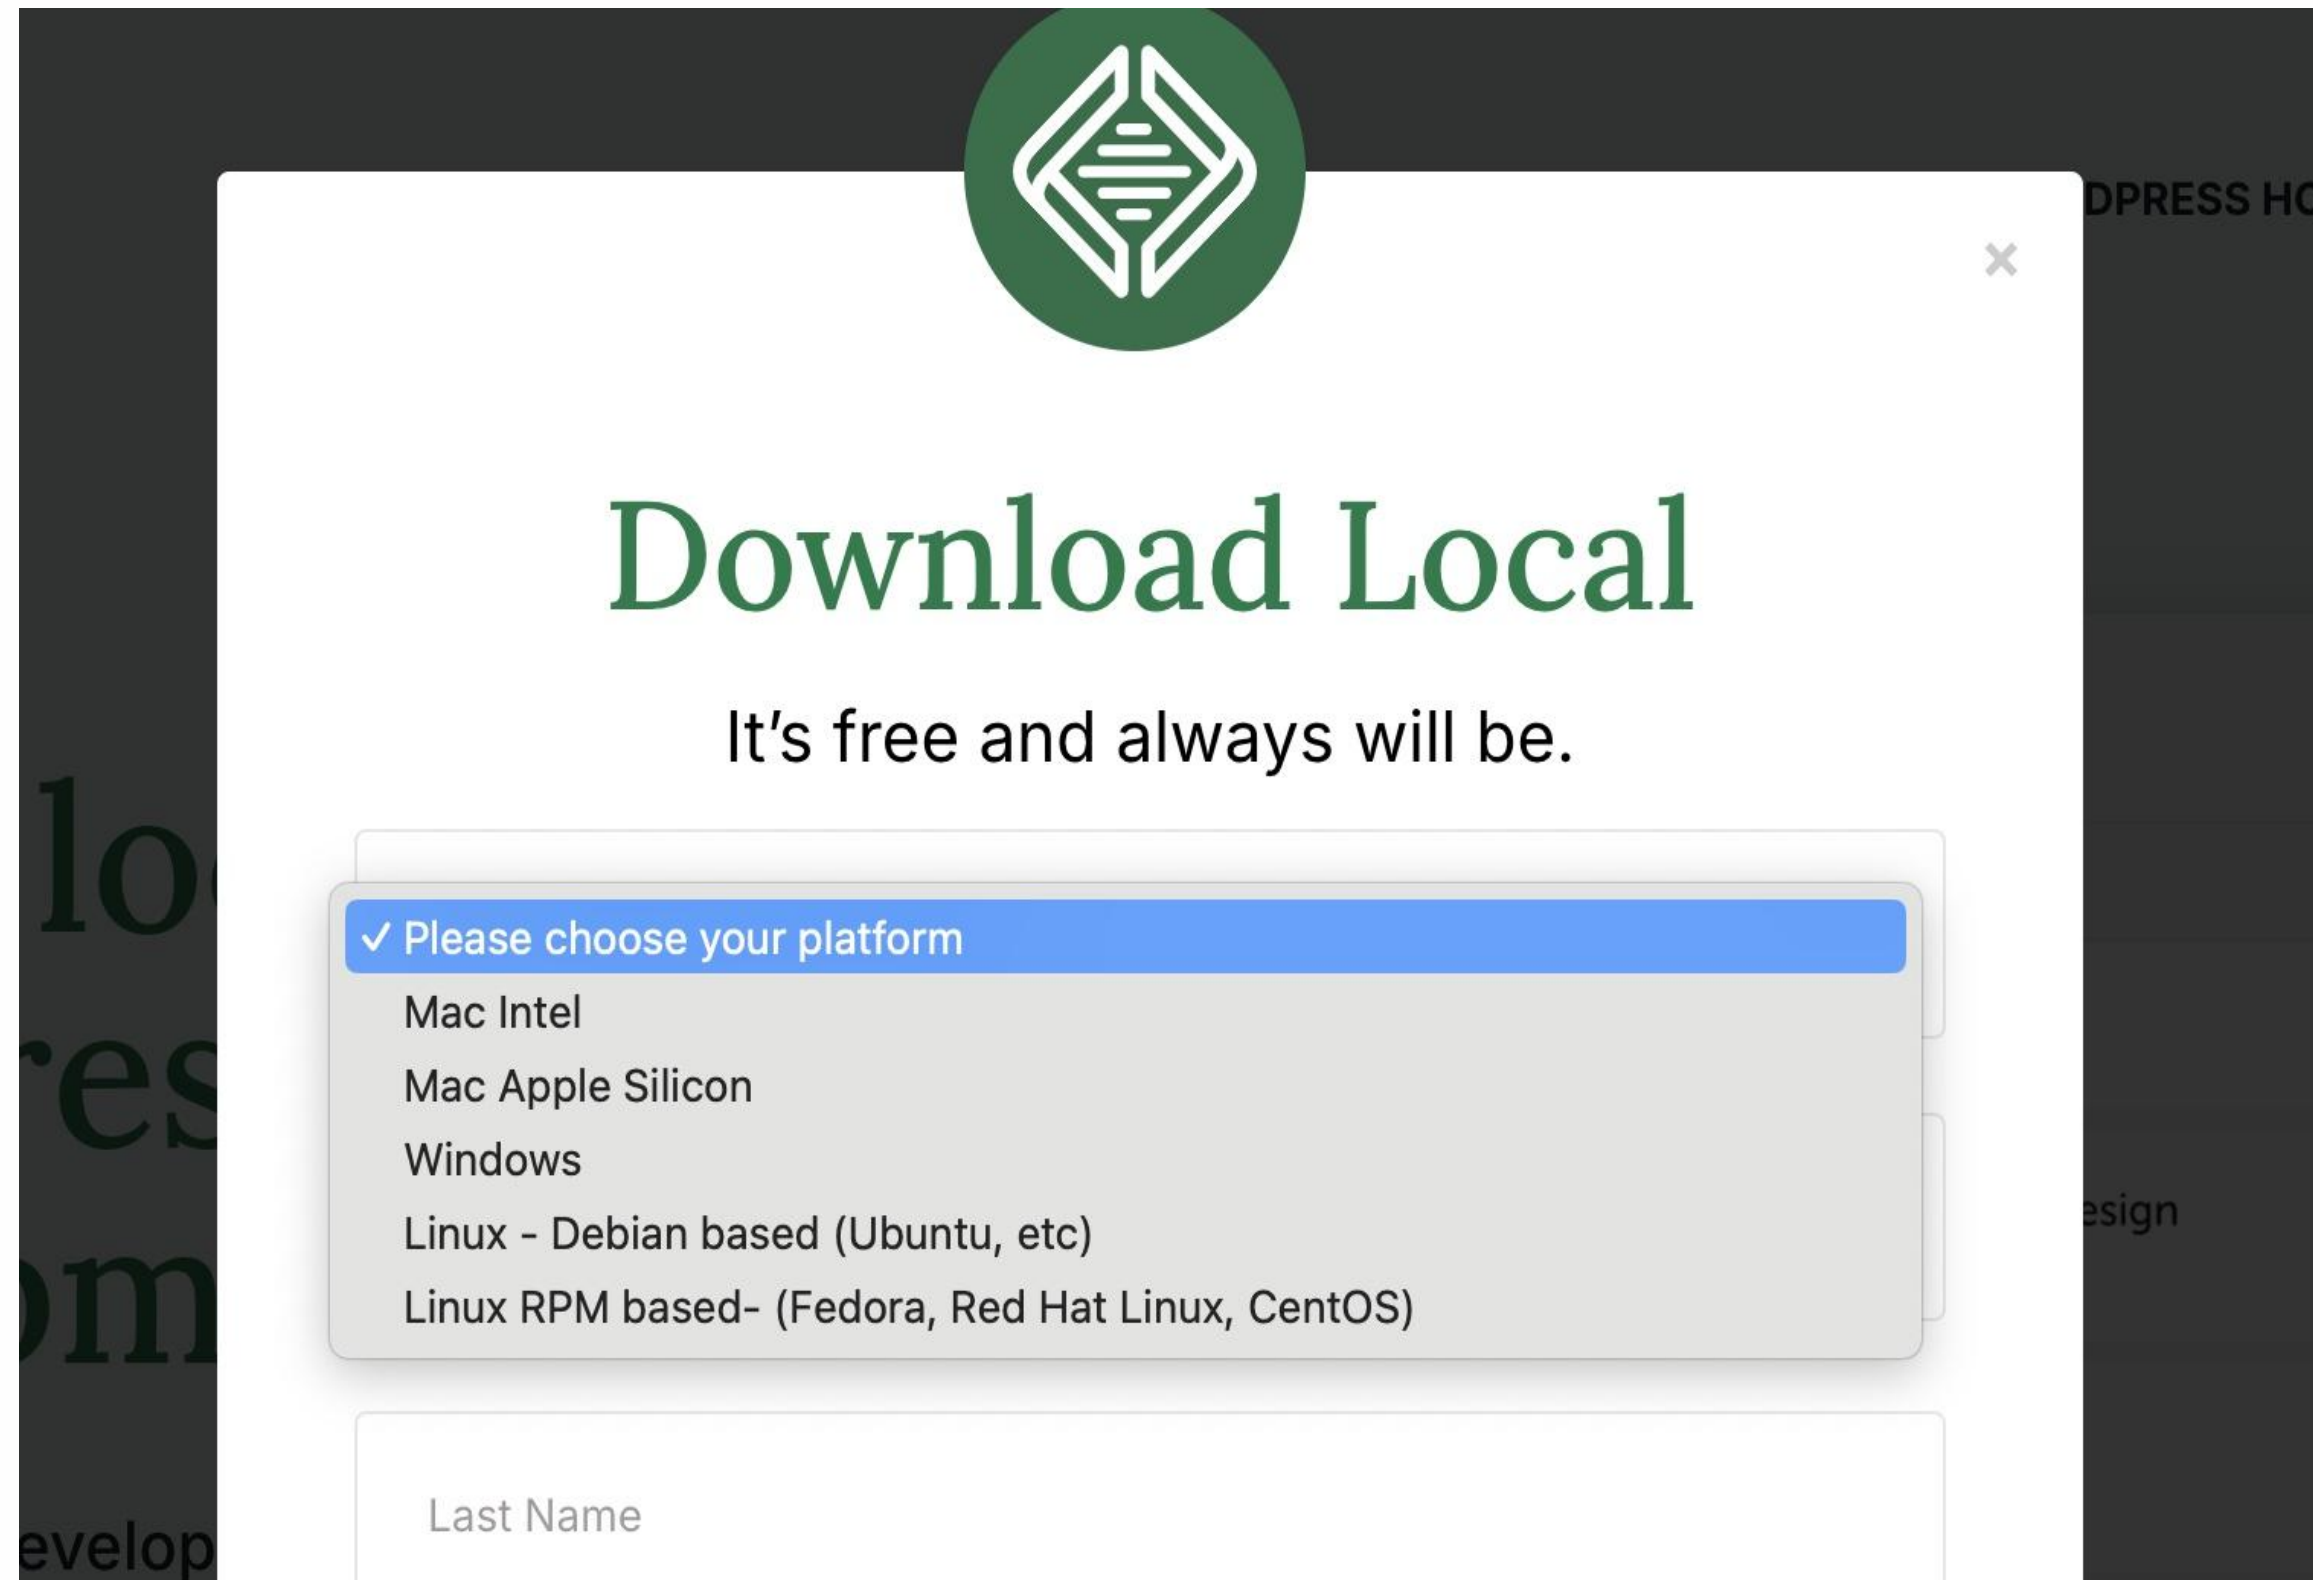

Step 3

Choose Platform

1. Select your operating system:

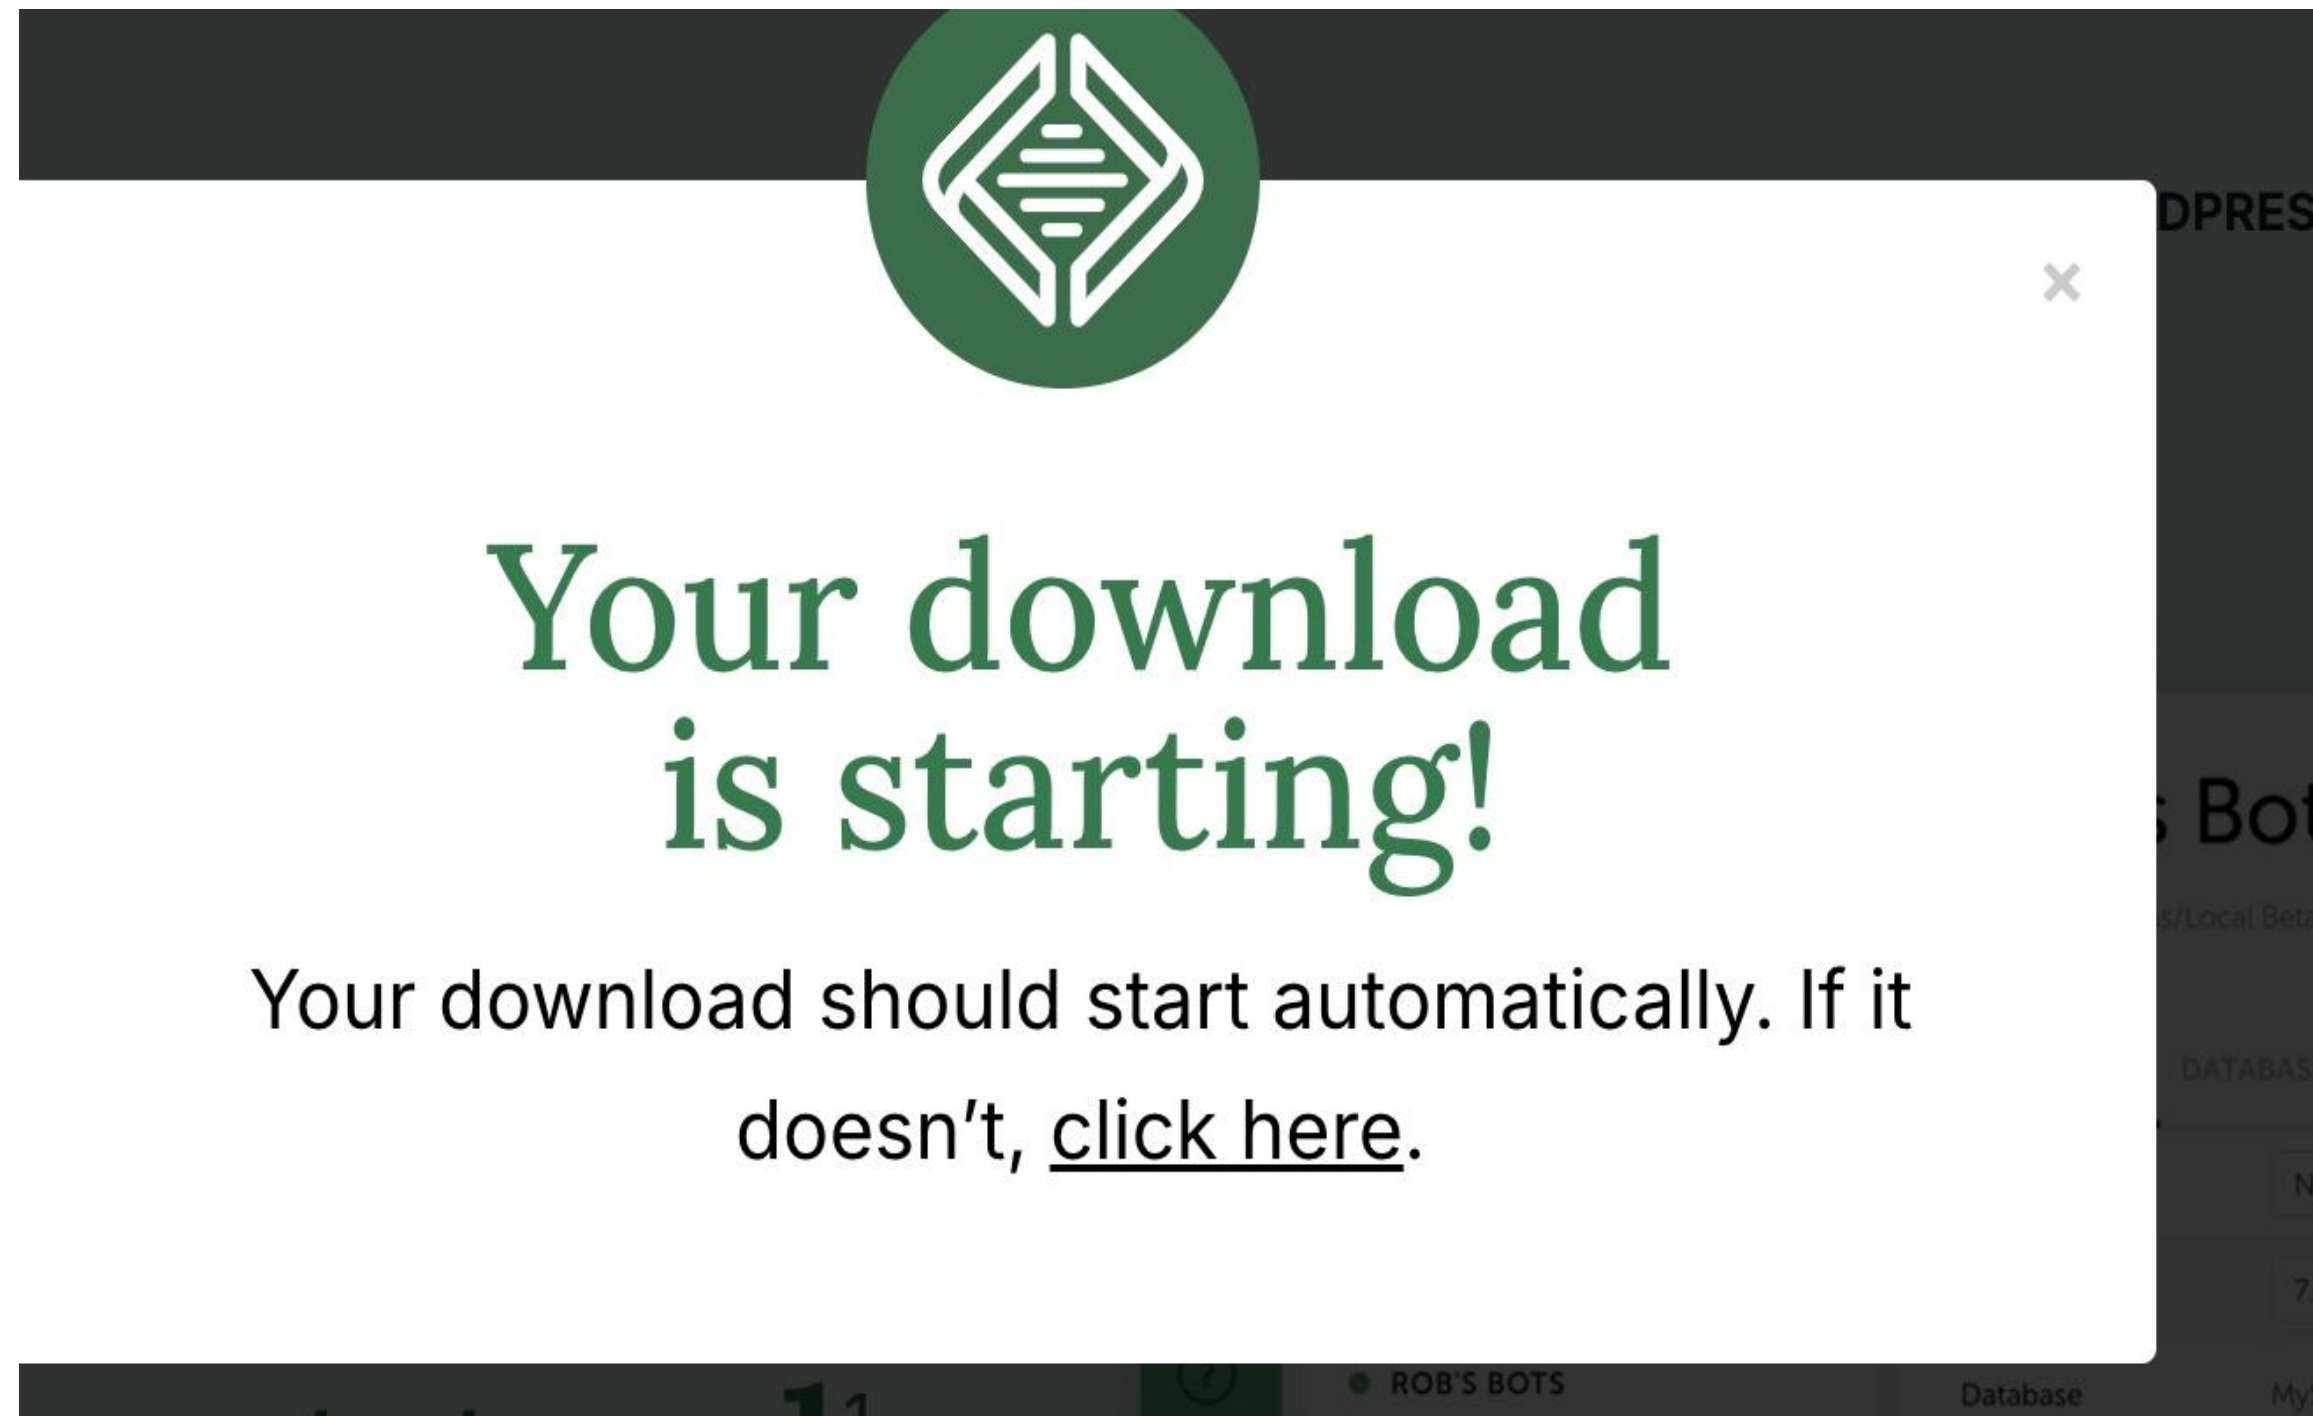

- Windows
- Mac

Step 4

Enter Details

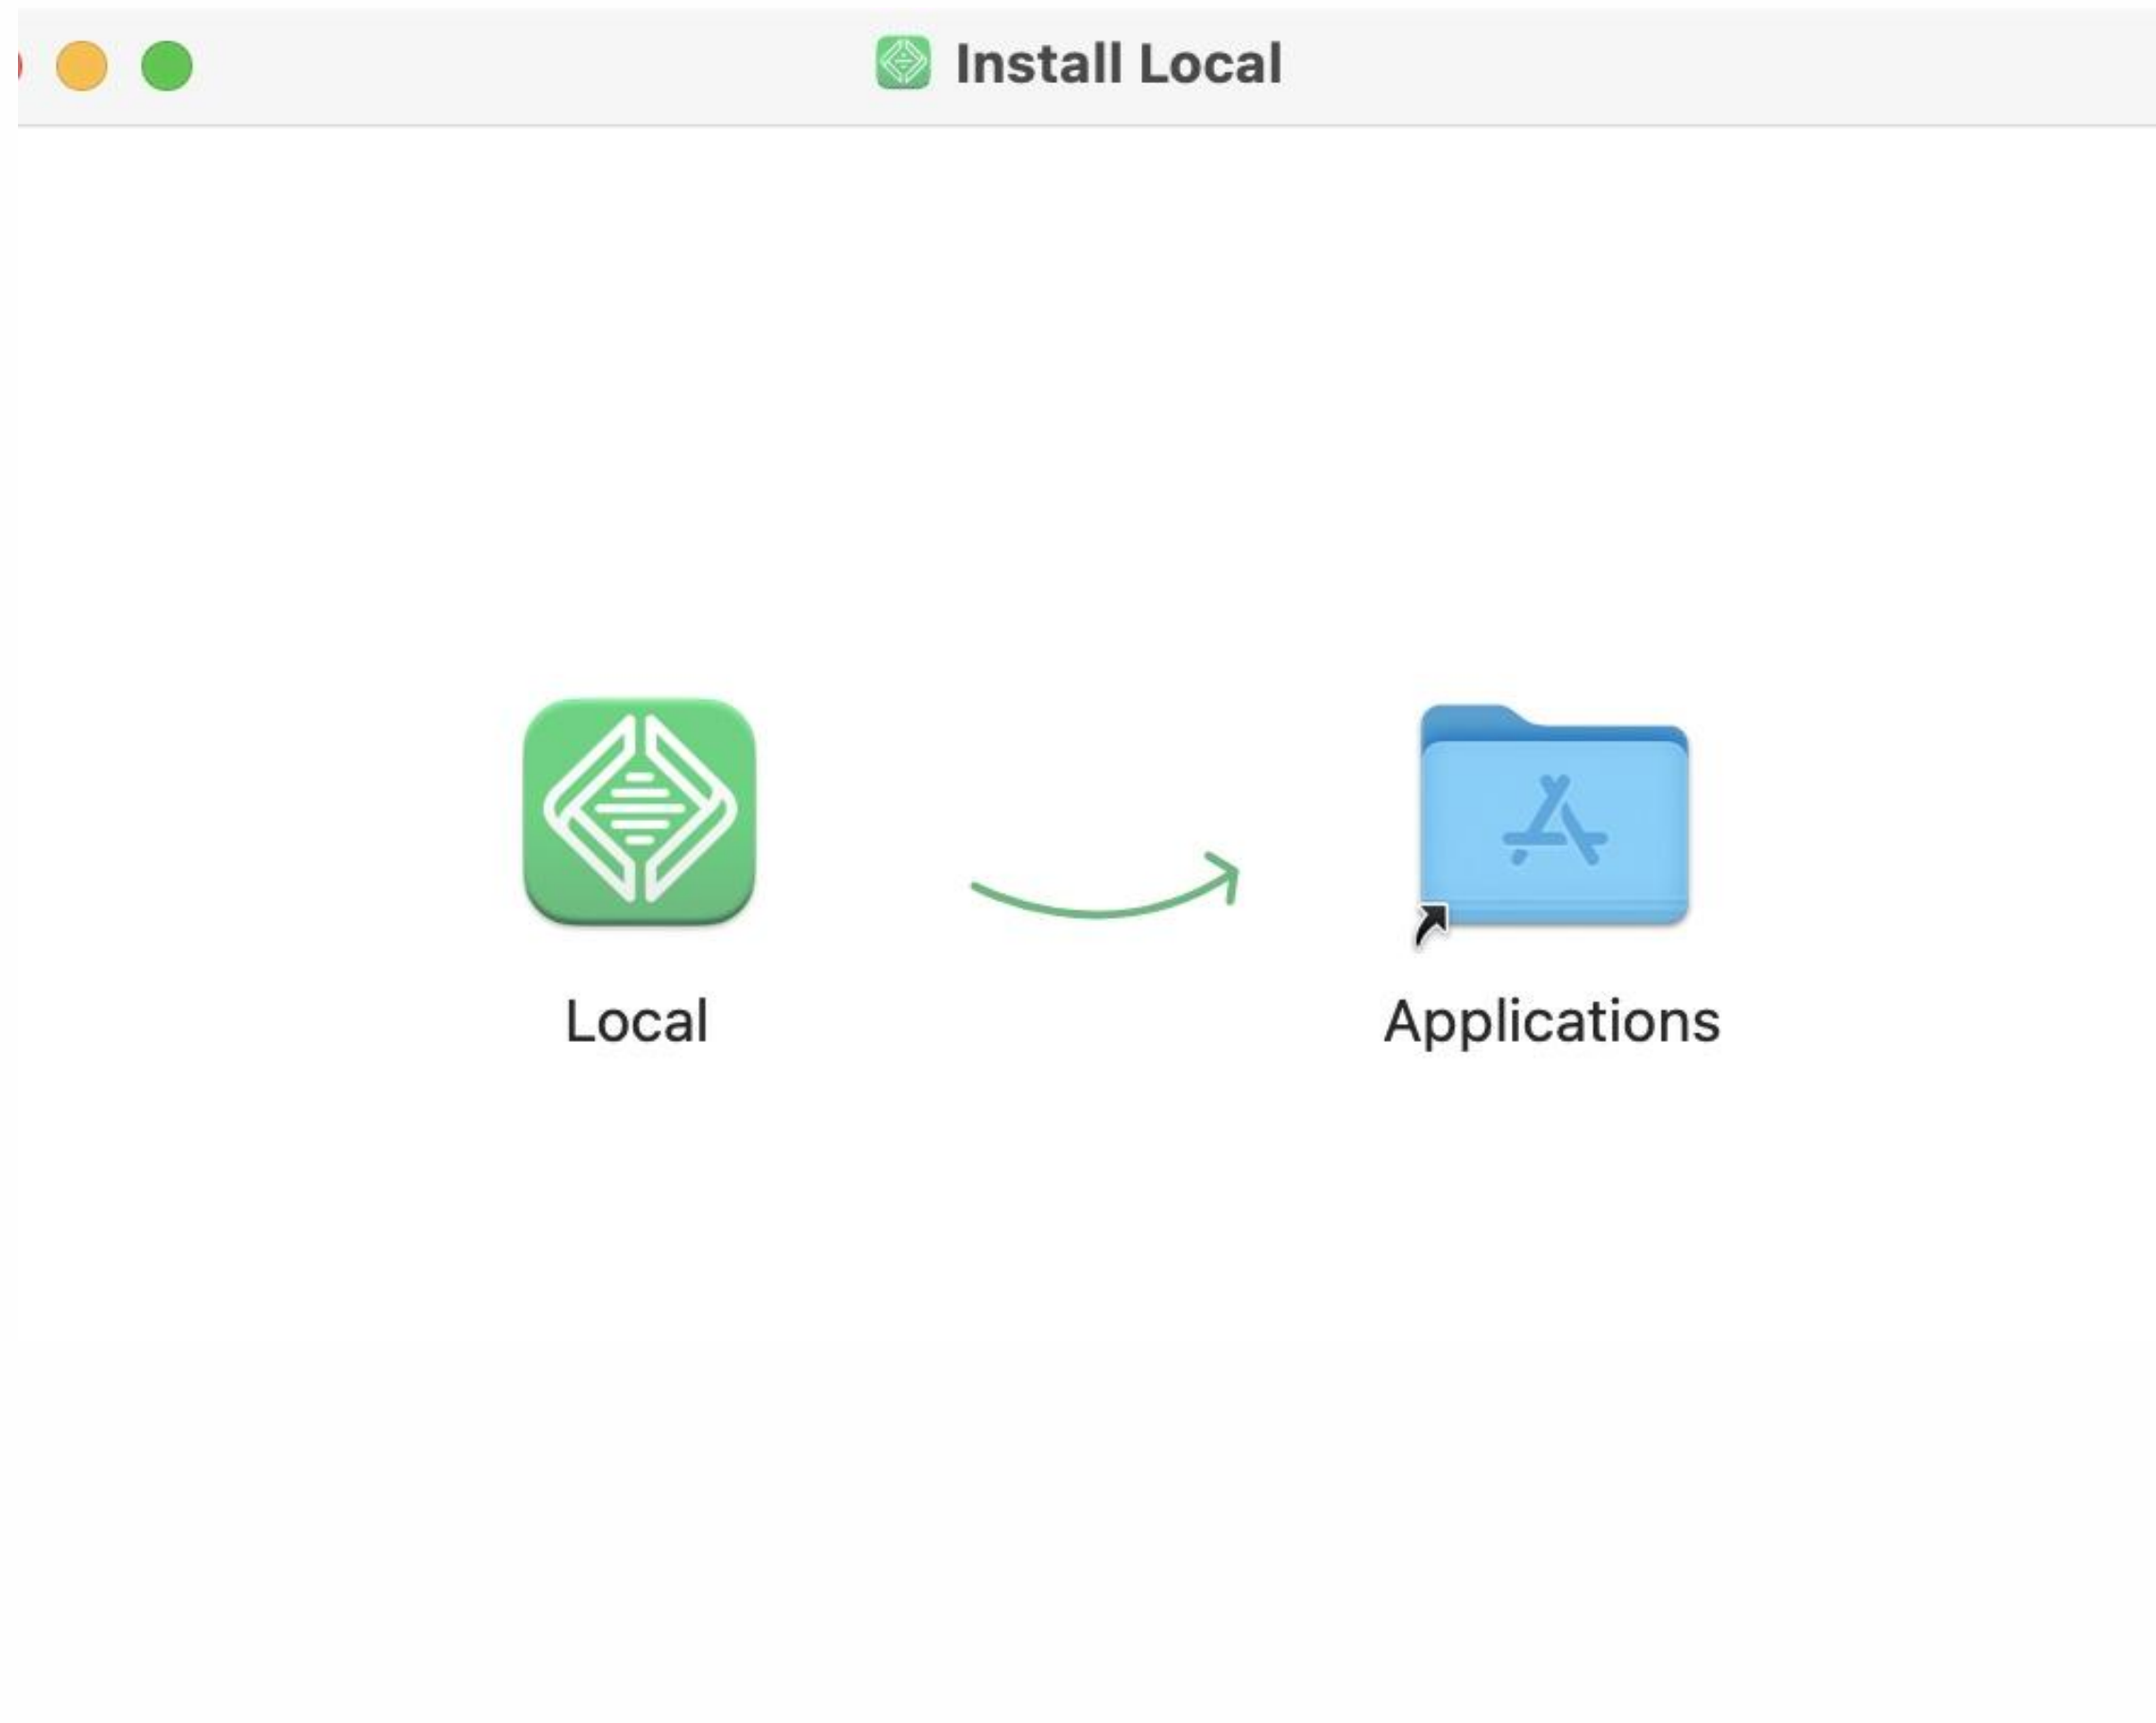

1. Provide your Name and Email
2. Click Proceed to start downloading the installer

Step 5

Install Local

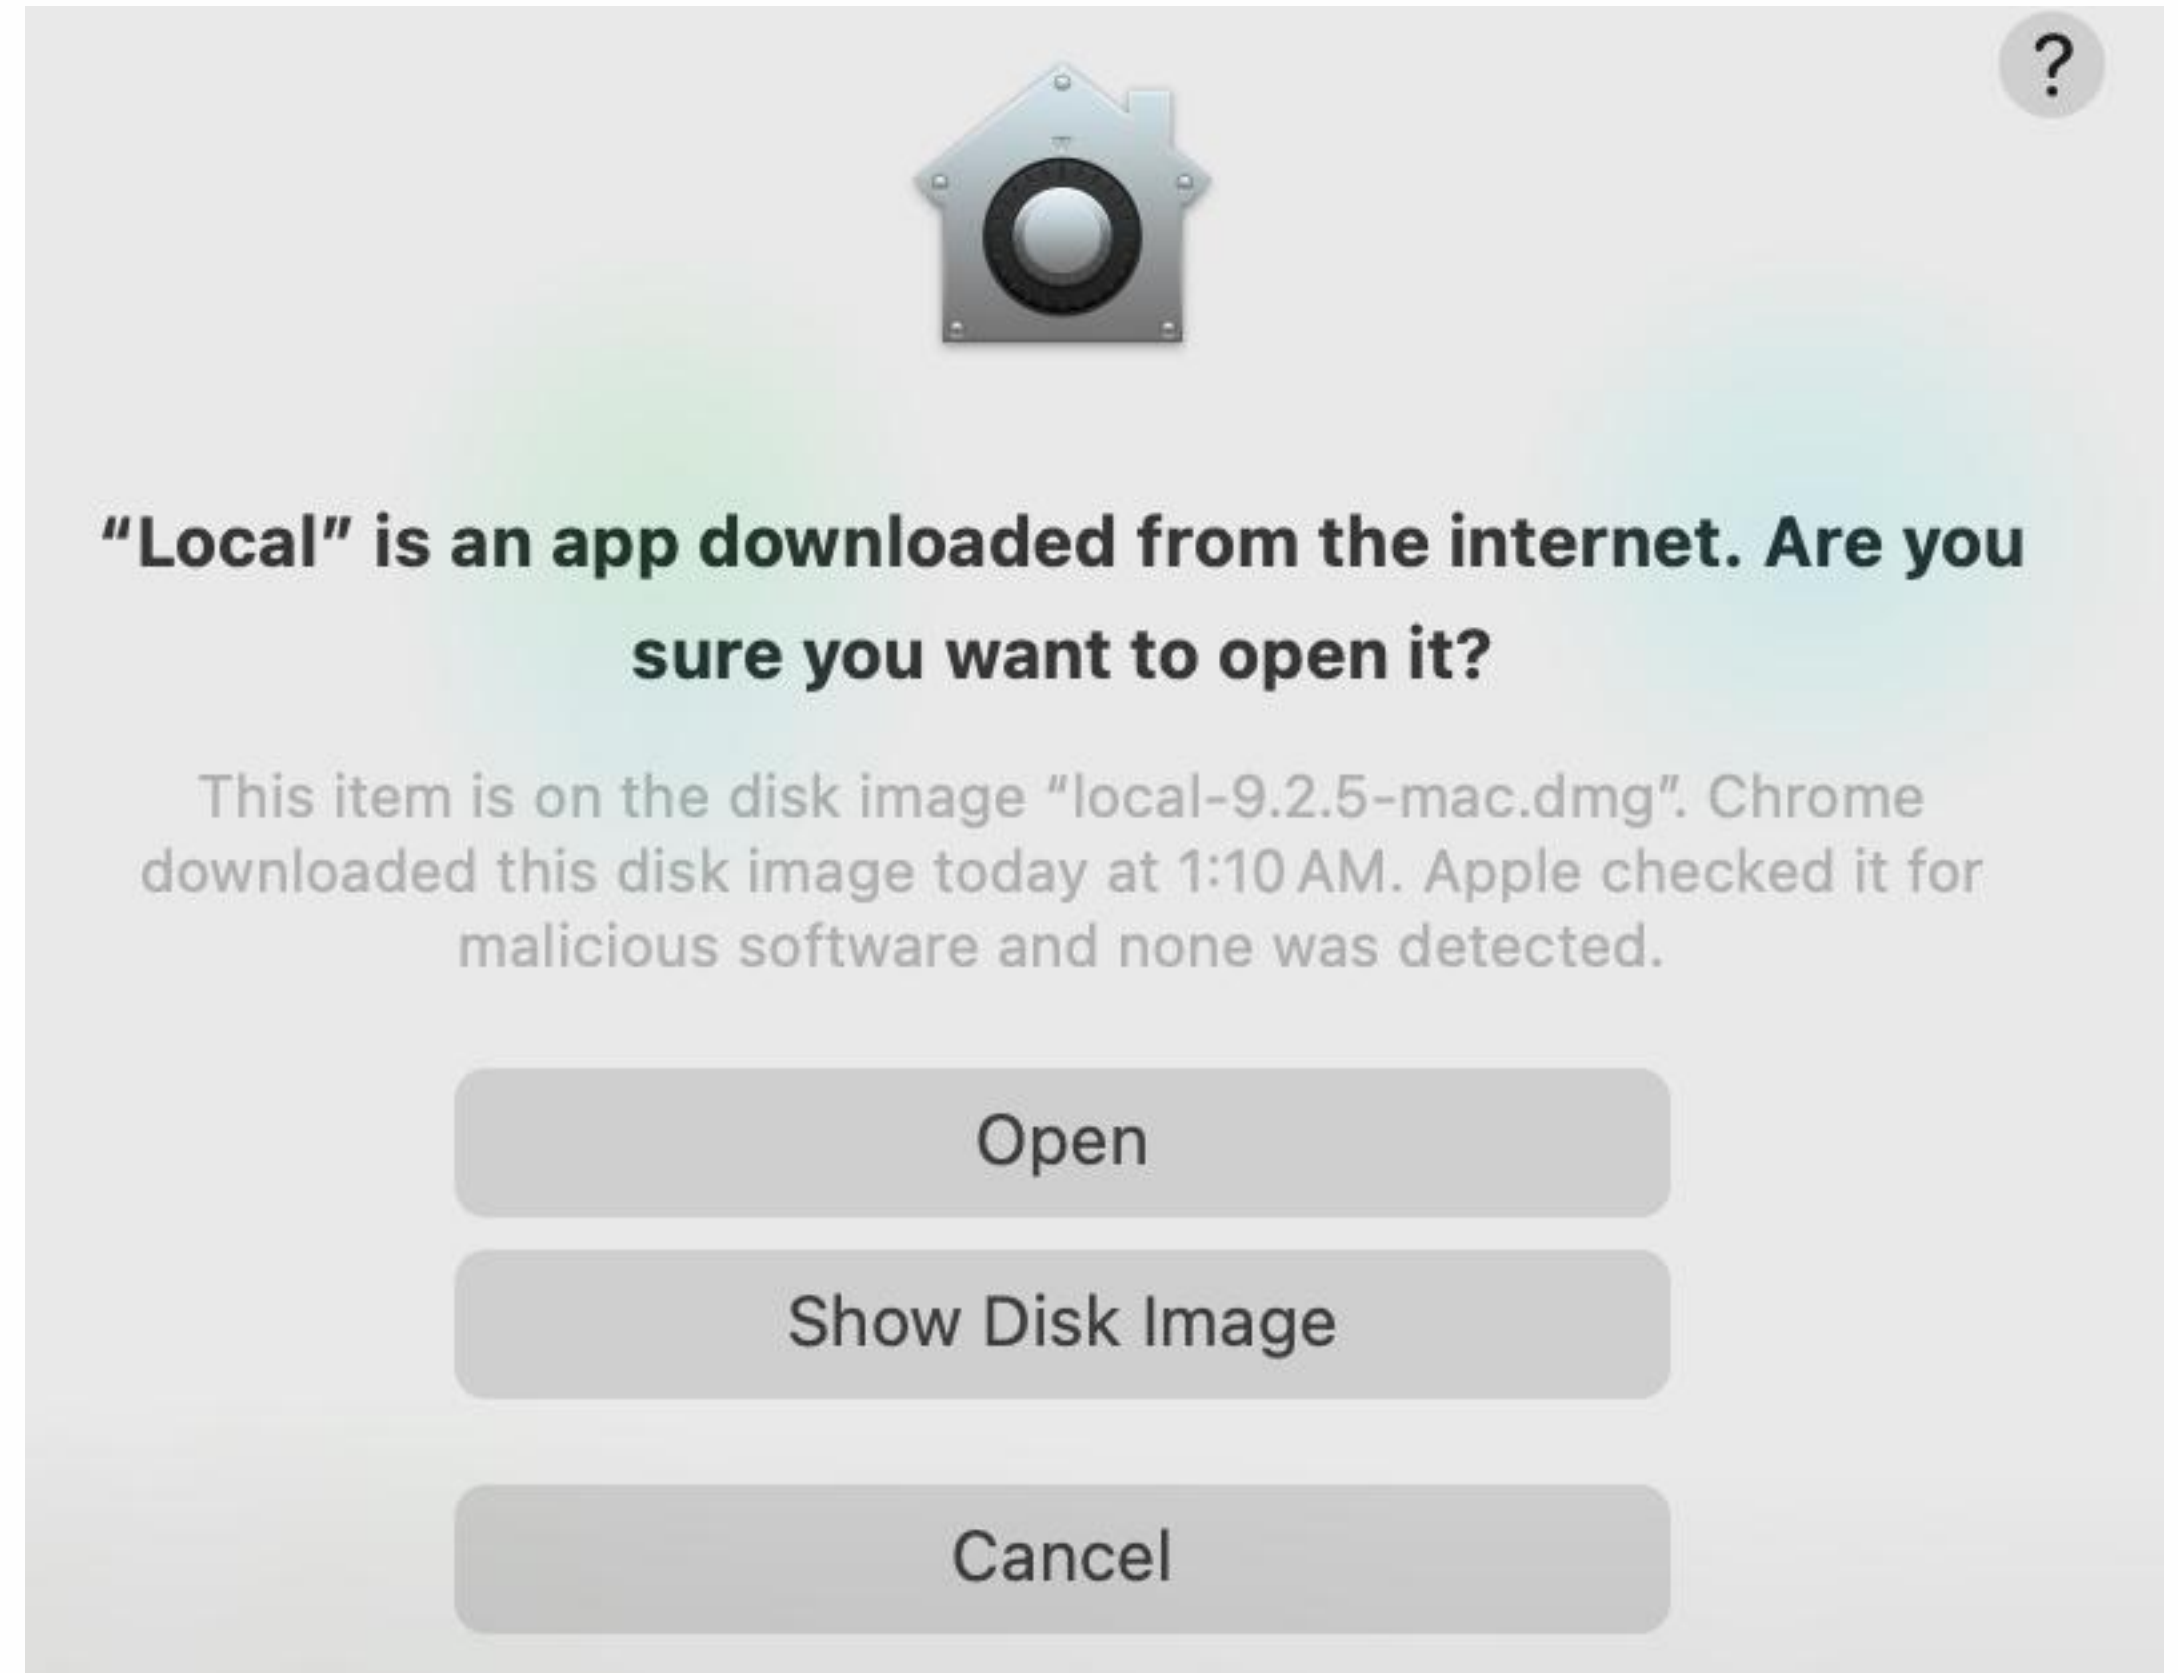

1. Open the downloaded installer file
2. Follow the on-screen instructions to install Local
3. When prompted, drag Local into your Applications folder

Step 6

Launch Local

1. Click the Local icon to launch the app
2. When asked, click Open to allow the application to run

Step 7

Accept Terms

1. Read and Agree to the LocalWP Terms and Conditions

We've updated Local's Terms of Service!

Local Terms of Service

By clicking "I Agree" below, you are entering into a contract with WP Engine, Inc. on behalf of itself and its affiliates ("WP Engine," "we," "our," or "us") which defines your rights and obligations related to the Local software ("Software"). That contract is comprised of these Terms of Service and the Privacy Policy located at <https://wpengine.com/legal/privacy/> (together, the "Agreement"). By using the

Create your account

Step 9

Email Verification

1. Check your email and click the verification link
2. Once verified, return to LocalWP and log in with your credentials

Step 10

LocalWP Dashboard

1. Upon login, you'll see the LocalWP overview page
2. Your LocalWP app shows site folders, database, and tools
3. Click Create a new site

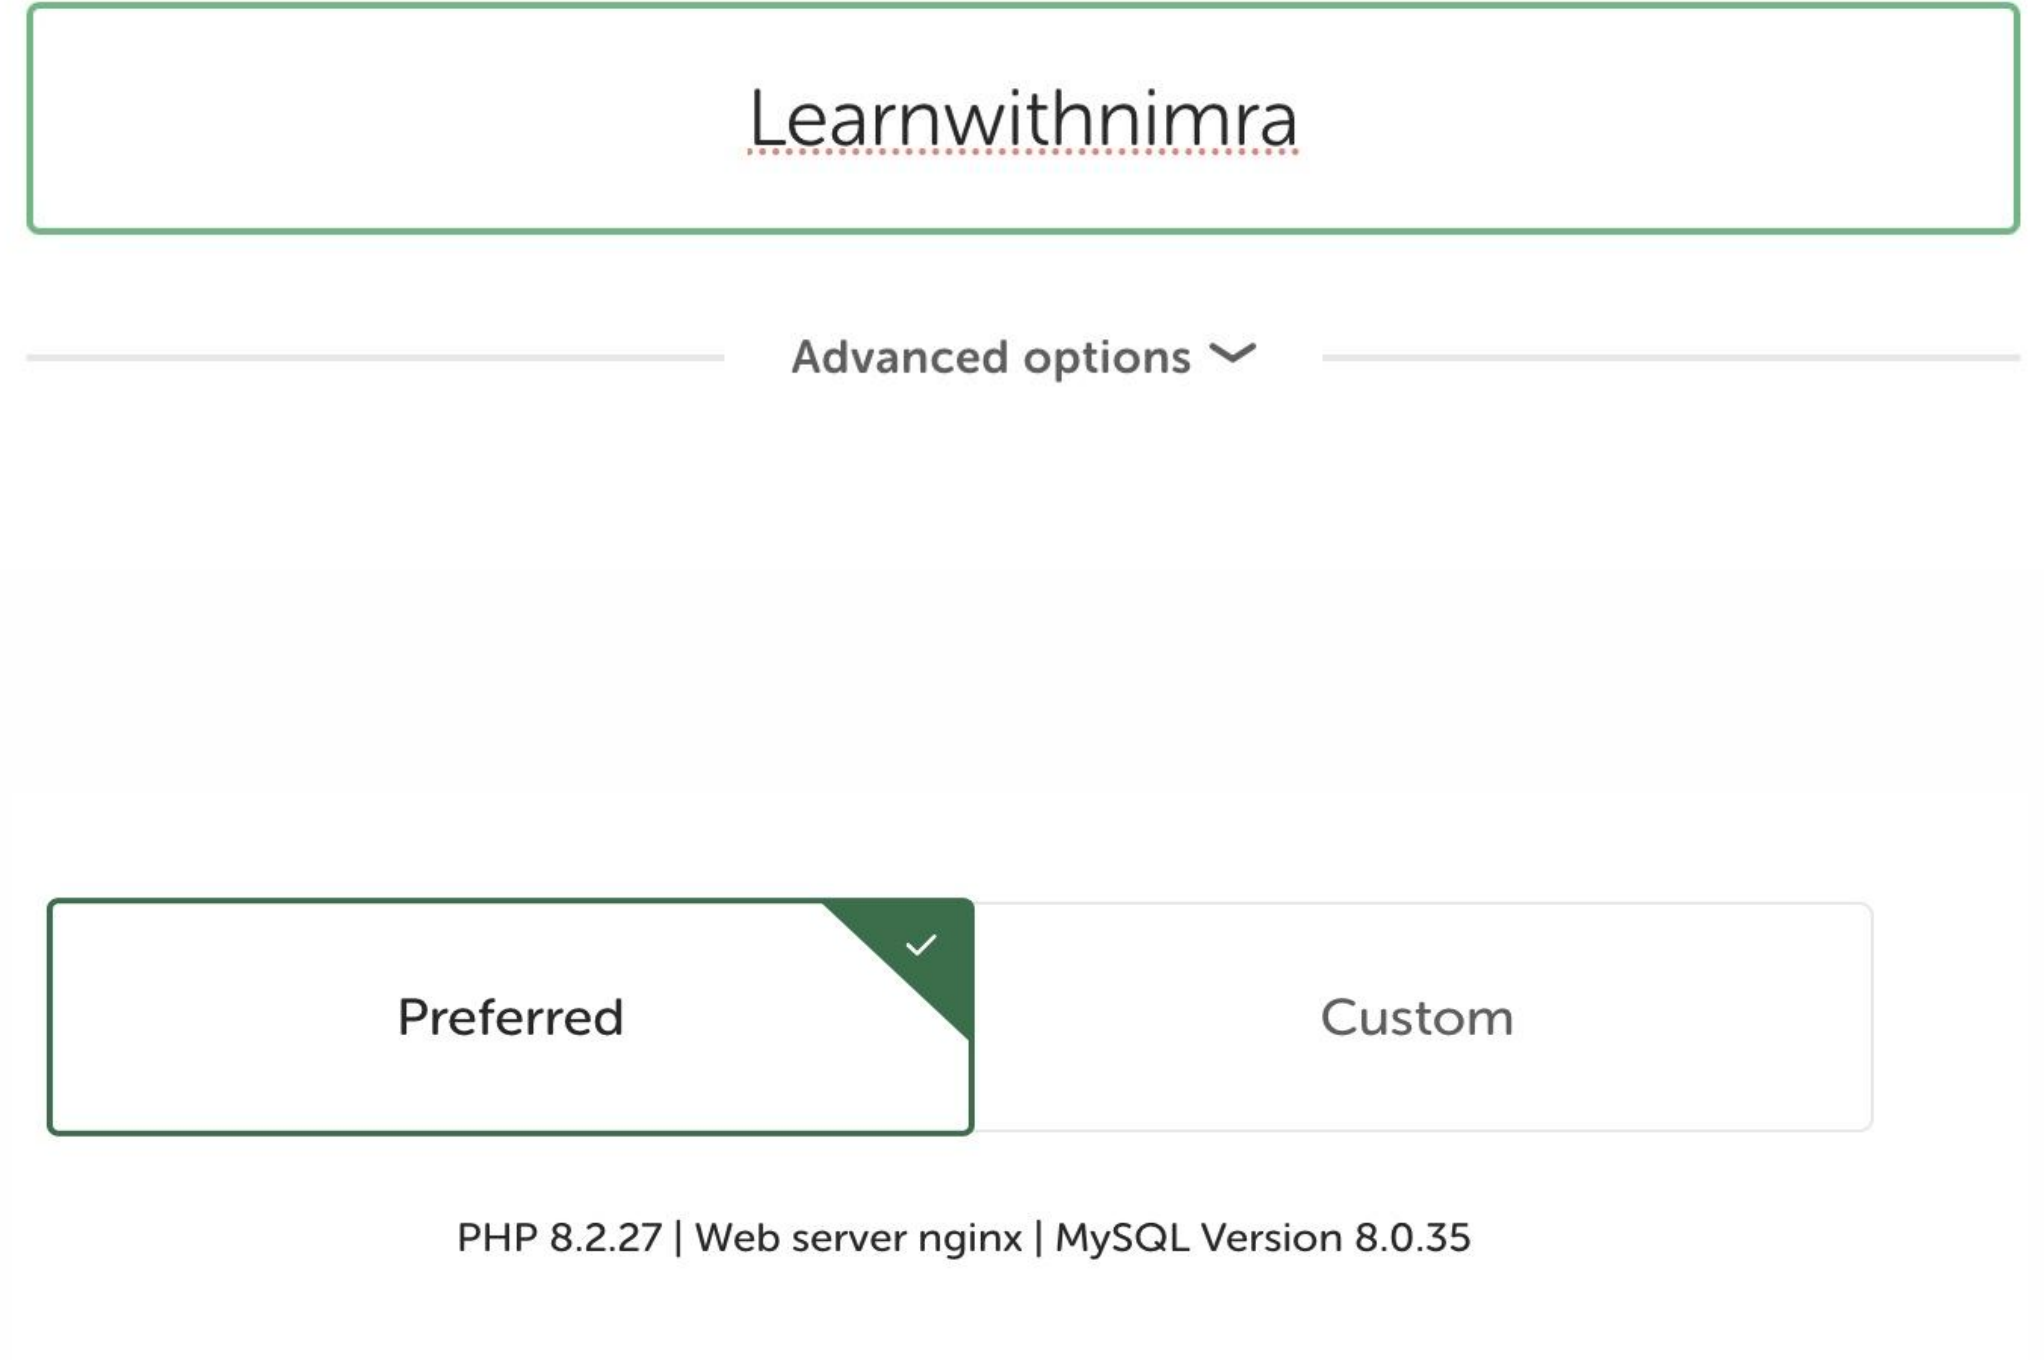

Looks like you haven't
created any sites yet!

+ Create a new site

Step 11

Site Name

1. Enter a Site Name (any of your choice)
2. Click Continue
3. Choose Preferred environment

The screenshot shows the 'Step 11: Site Name' configuration screen of a LAMP Stack Installer. At the top, there is a text input field containing 'Learnwithnimra'. Below this field is a horizontal line with the text 'Advanced options' and a downward-pointing chevron icon. Underneath the line are two radio button options: 'Preferred' and 'Custom'. The 'Preferred' option is selected, indicated by a green checkmark in a dark green triangle on its right side. At the bottom of the screen, the text 'PHP 8.2.27 | Web server nginx | MySQL Version 8.0.35' is displayed.

Step 14

Access WP-Admin

1. Click WP Admin in LocalWP
2. Log in with the credentials you set earlier

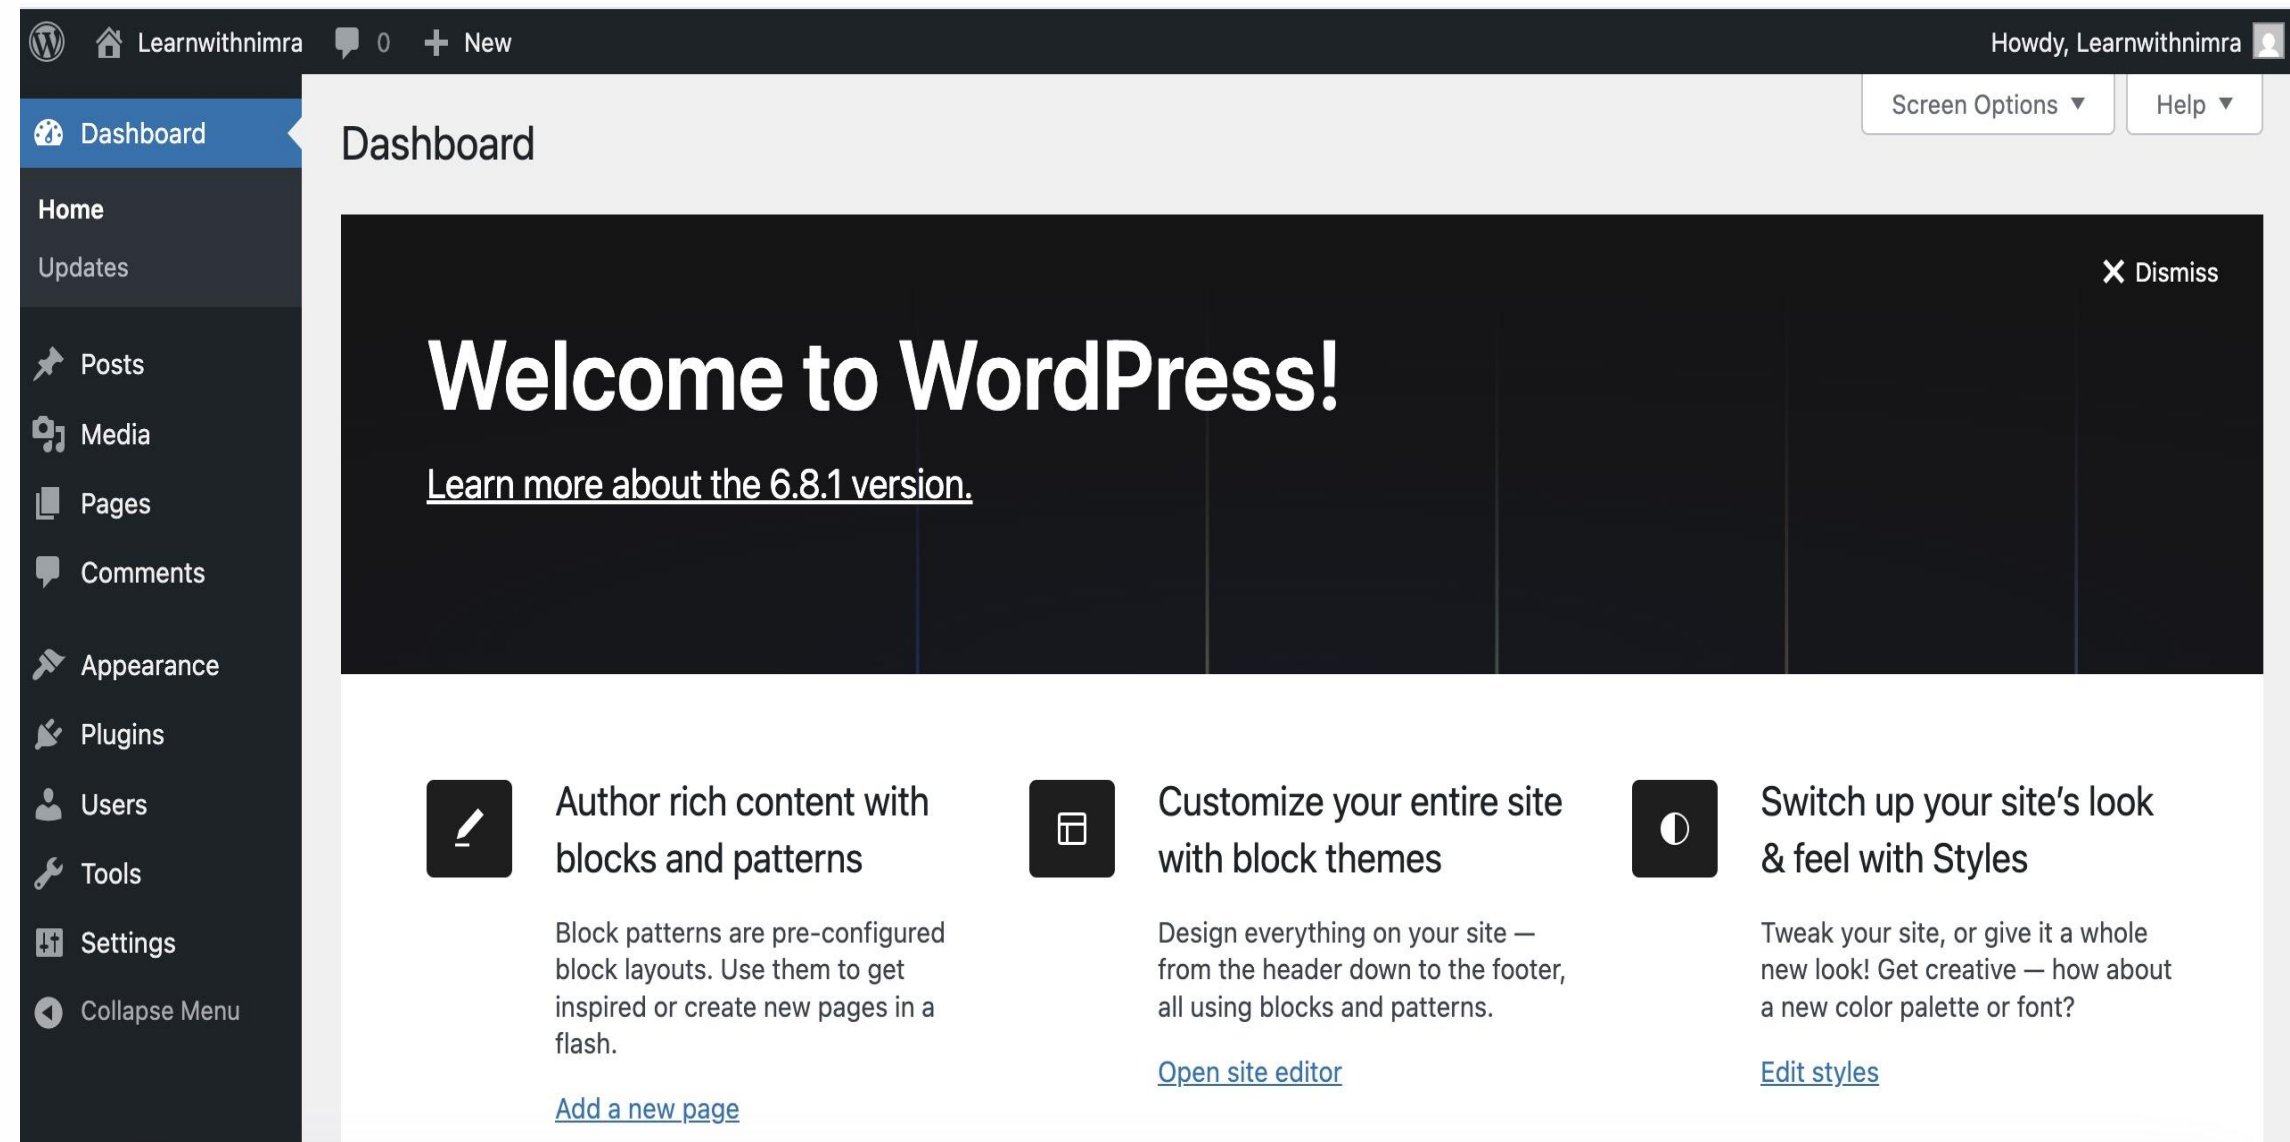

The image shows the WordPress login interface. At the top center is the WordPress logo. Below it is a white login box with a thin border. Inside the box, the text "Username or Email Address" is above a text input field containing "Learnwithnimra". Below that, the text "Password" is above a password input field filled with ten black dots. To the right of the password field is an eye icon. Below the password field is a checkbox labeled "Remember Me". To the right of the checkbox is a blue "Log In" button. Below the login box, the text "Lost your password?" is displayed. At the bottom, there is a link that says "← Go to Learnwithnimra".

Step 15

WP Dashboard

1. After logging in, you'll see the WordPress Dashboard

Step 16

Enable Live Link

1. In LocalWP, toggle Live Link to generate a public URL
2. Copy the link and credentials displayed

Live Link

Install WordPress on Localhost using XAMPP

Step 1

Download XAMPP

1. Open your browser and go to apachefriends.org
2. Click Download XAMPP for your OS (Windows/Mac/Linux)

The screenshot shows the Apache Friends XAMPP website. The header includes navigation links: Apache Friends, Download, Add-ons, Hosting, Community, About, and a search bar. The main heading is "XAMPP Apache + MariaDB + PHP + Perl". Below this, a section titled "What is XAMPP?" describes it as a popular PHP development environment. To the right is a large XAMPP logo. At the bottom, there are download buttons for Windows, Linux, and OS X, each showing the version (8.1.1) and PHP version (8.1.1). A green "Download" button with the text "Click here for other versions" is also present.

Awesome!

Your download will start automatically. If it doesn't, [click here](#).

Reading

Be sure to read the install instructions and FAQs:

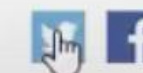

- [Linux FAQs](#)
- [Windows FAQs](#)
- [OS X FAQs](#)
- [OS X XAMPP-VM FAQs](#)

You can find additional help on our forums or Stack Overflow.

Tell Your Friends about XAMPP

I just got #XAMPP from @ApacheFriends
<https://www.apachefriends.org#opensource>

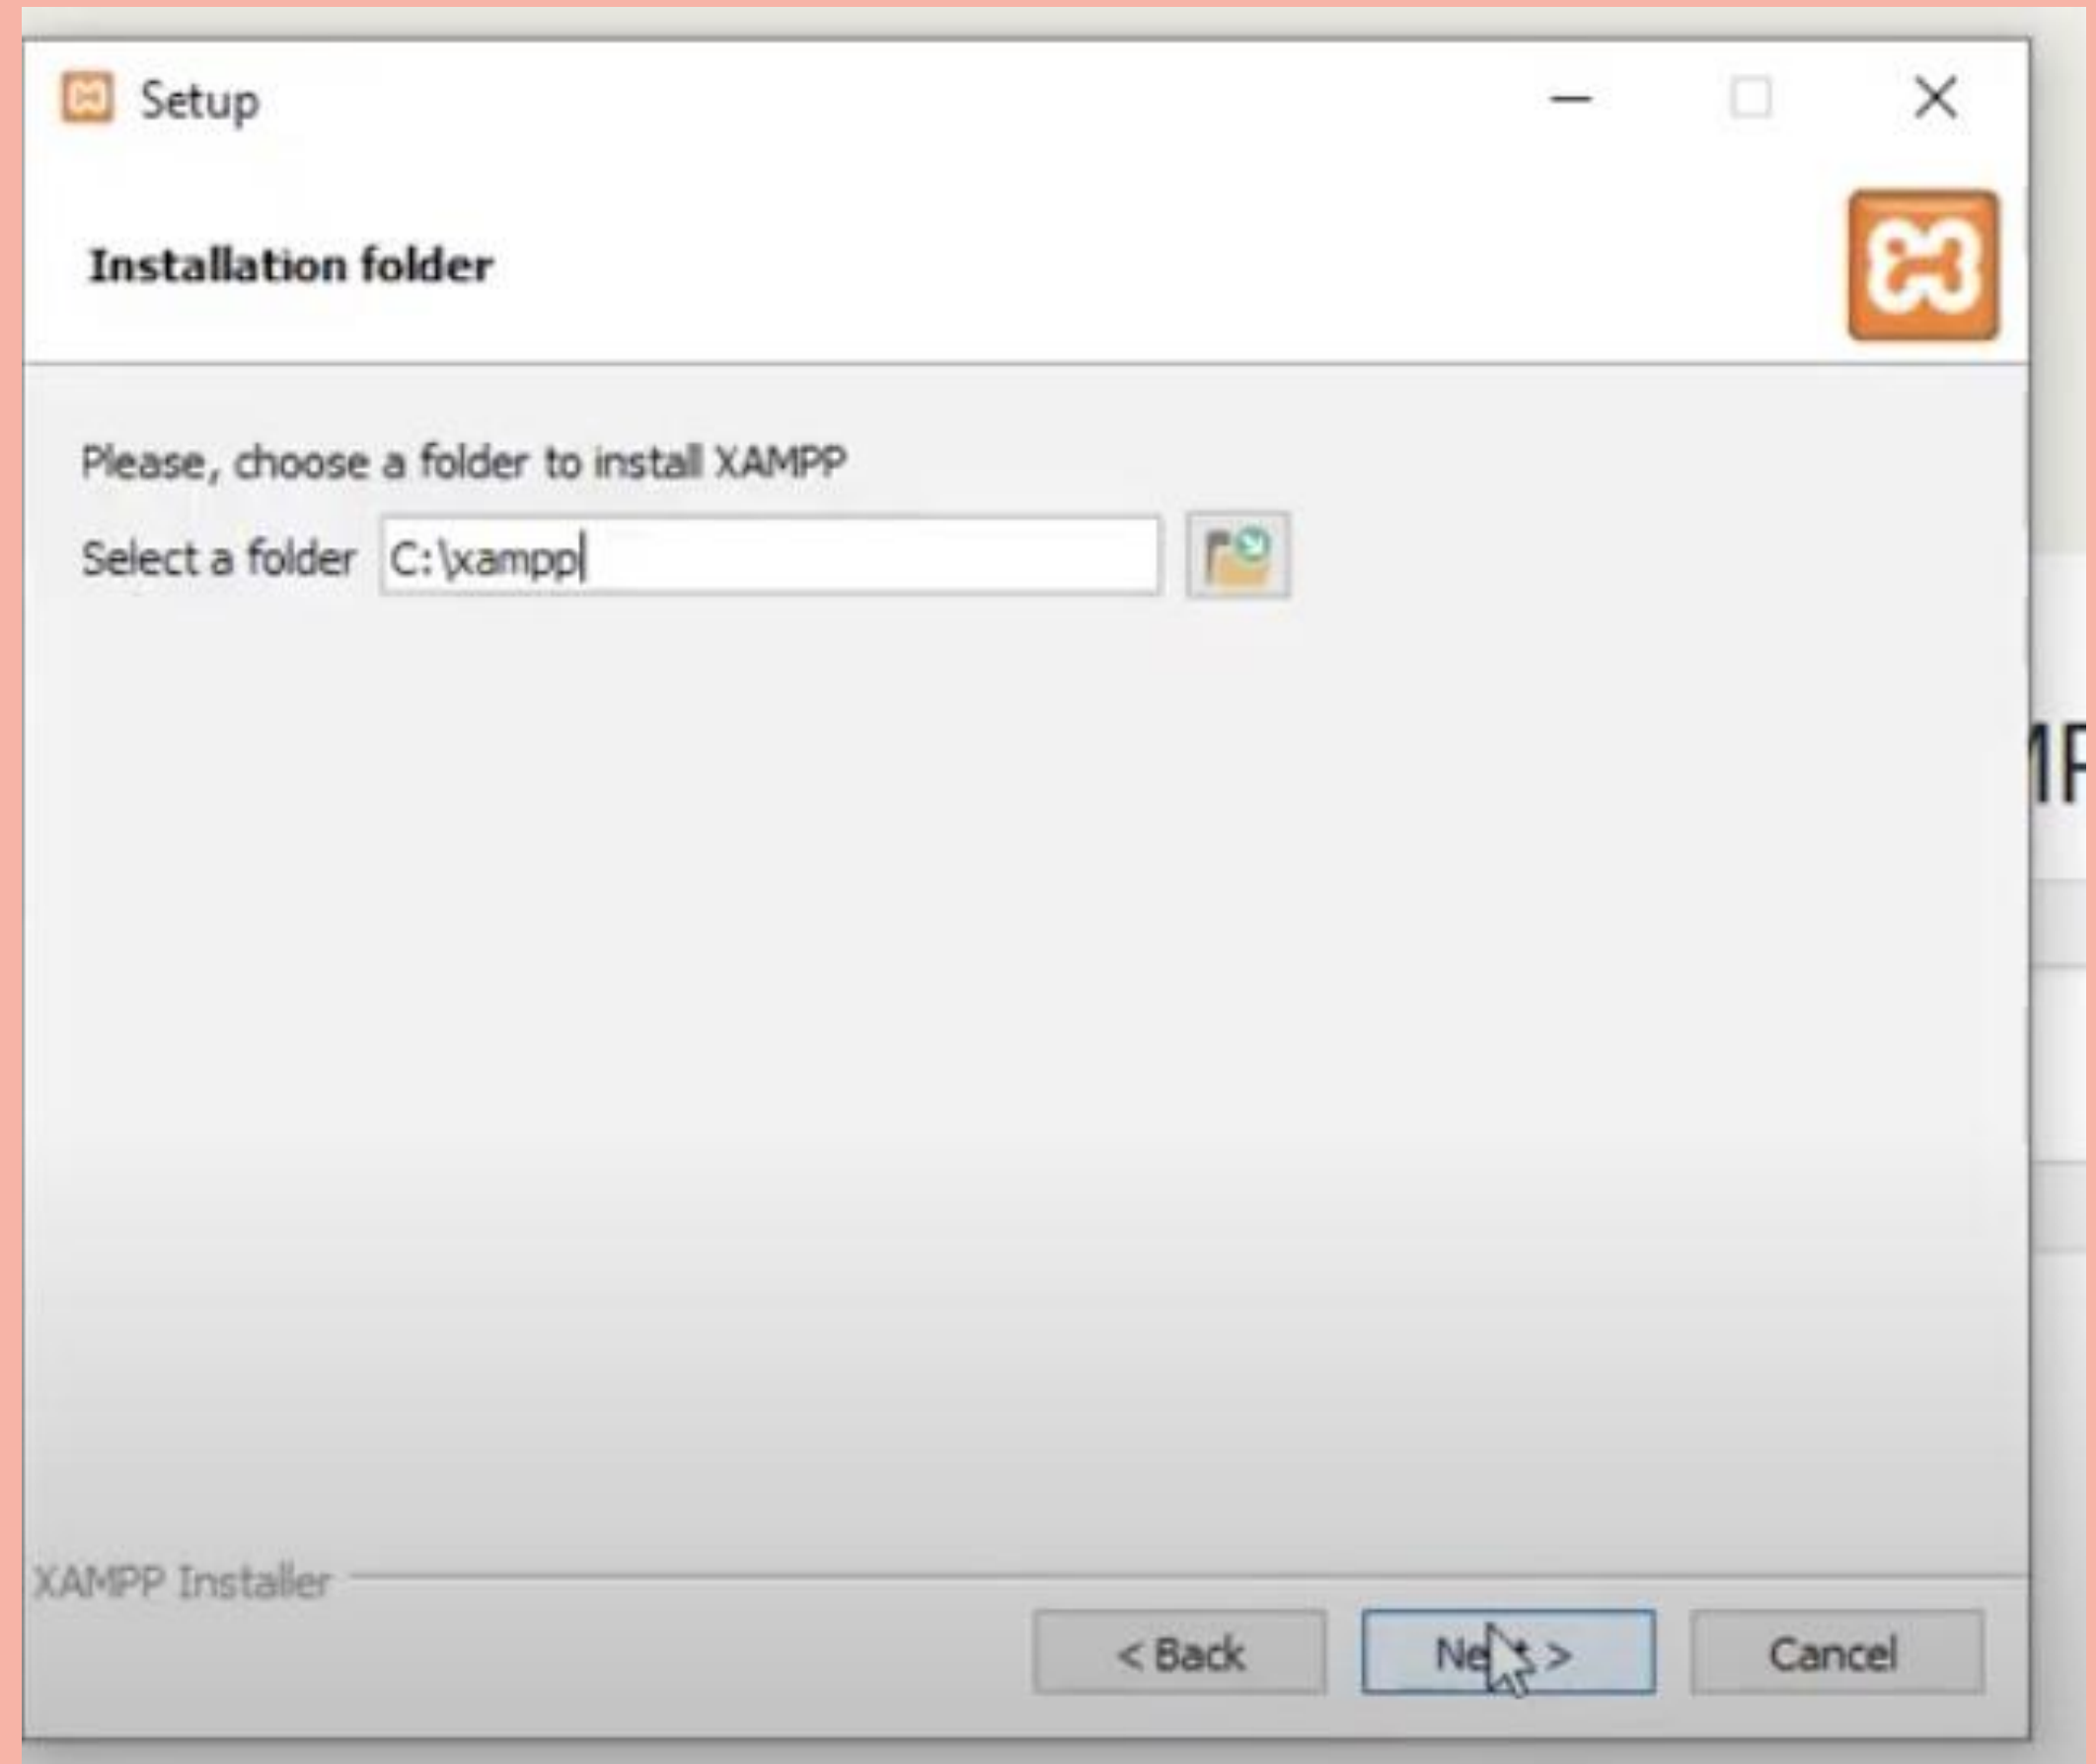

[Tweet!](#)

Step 2

Install XAMPP

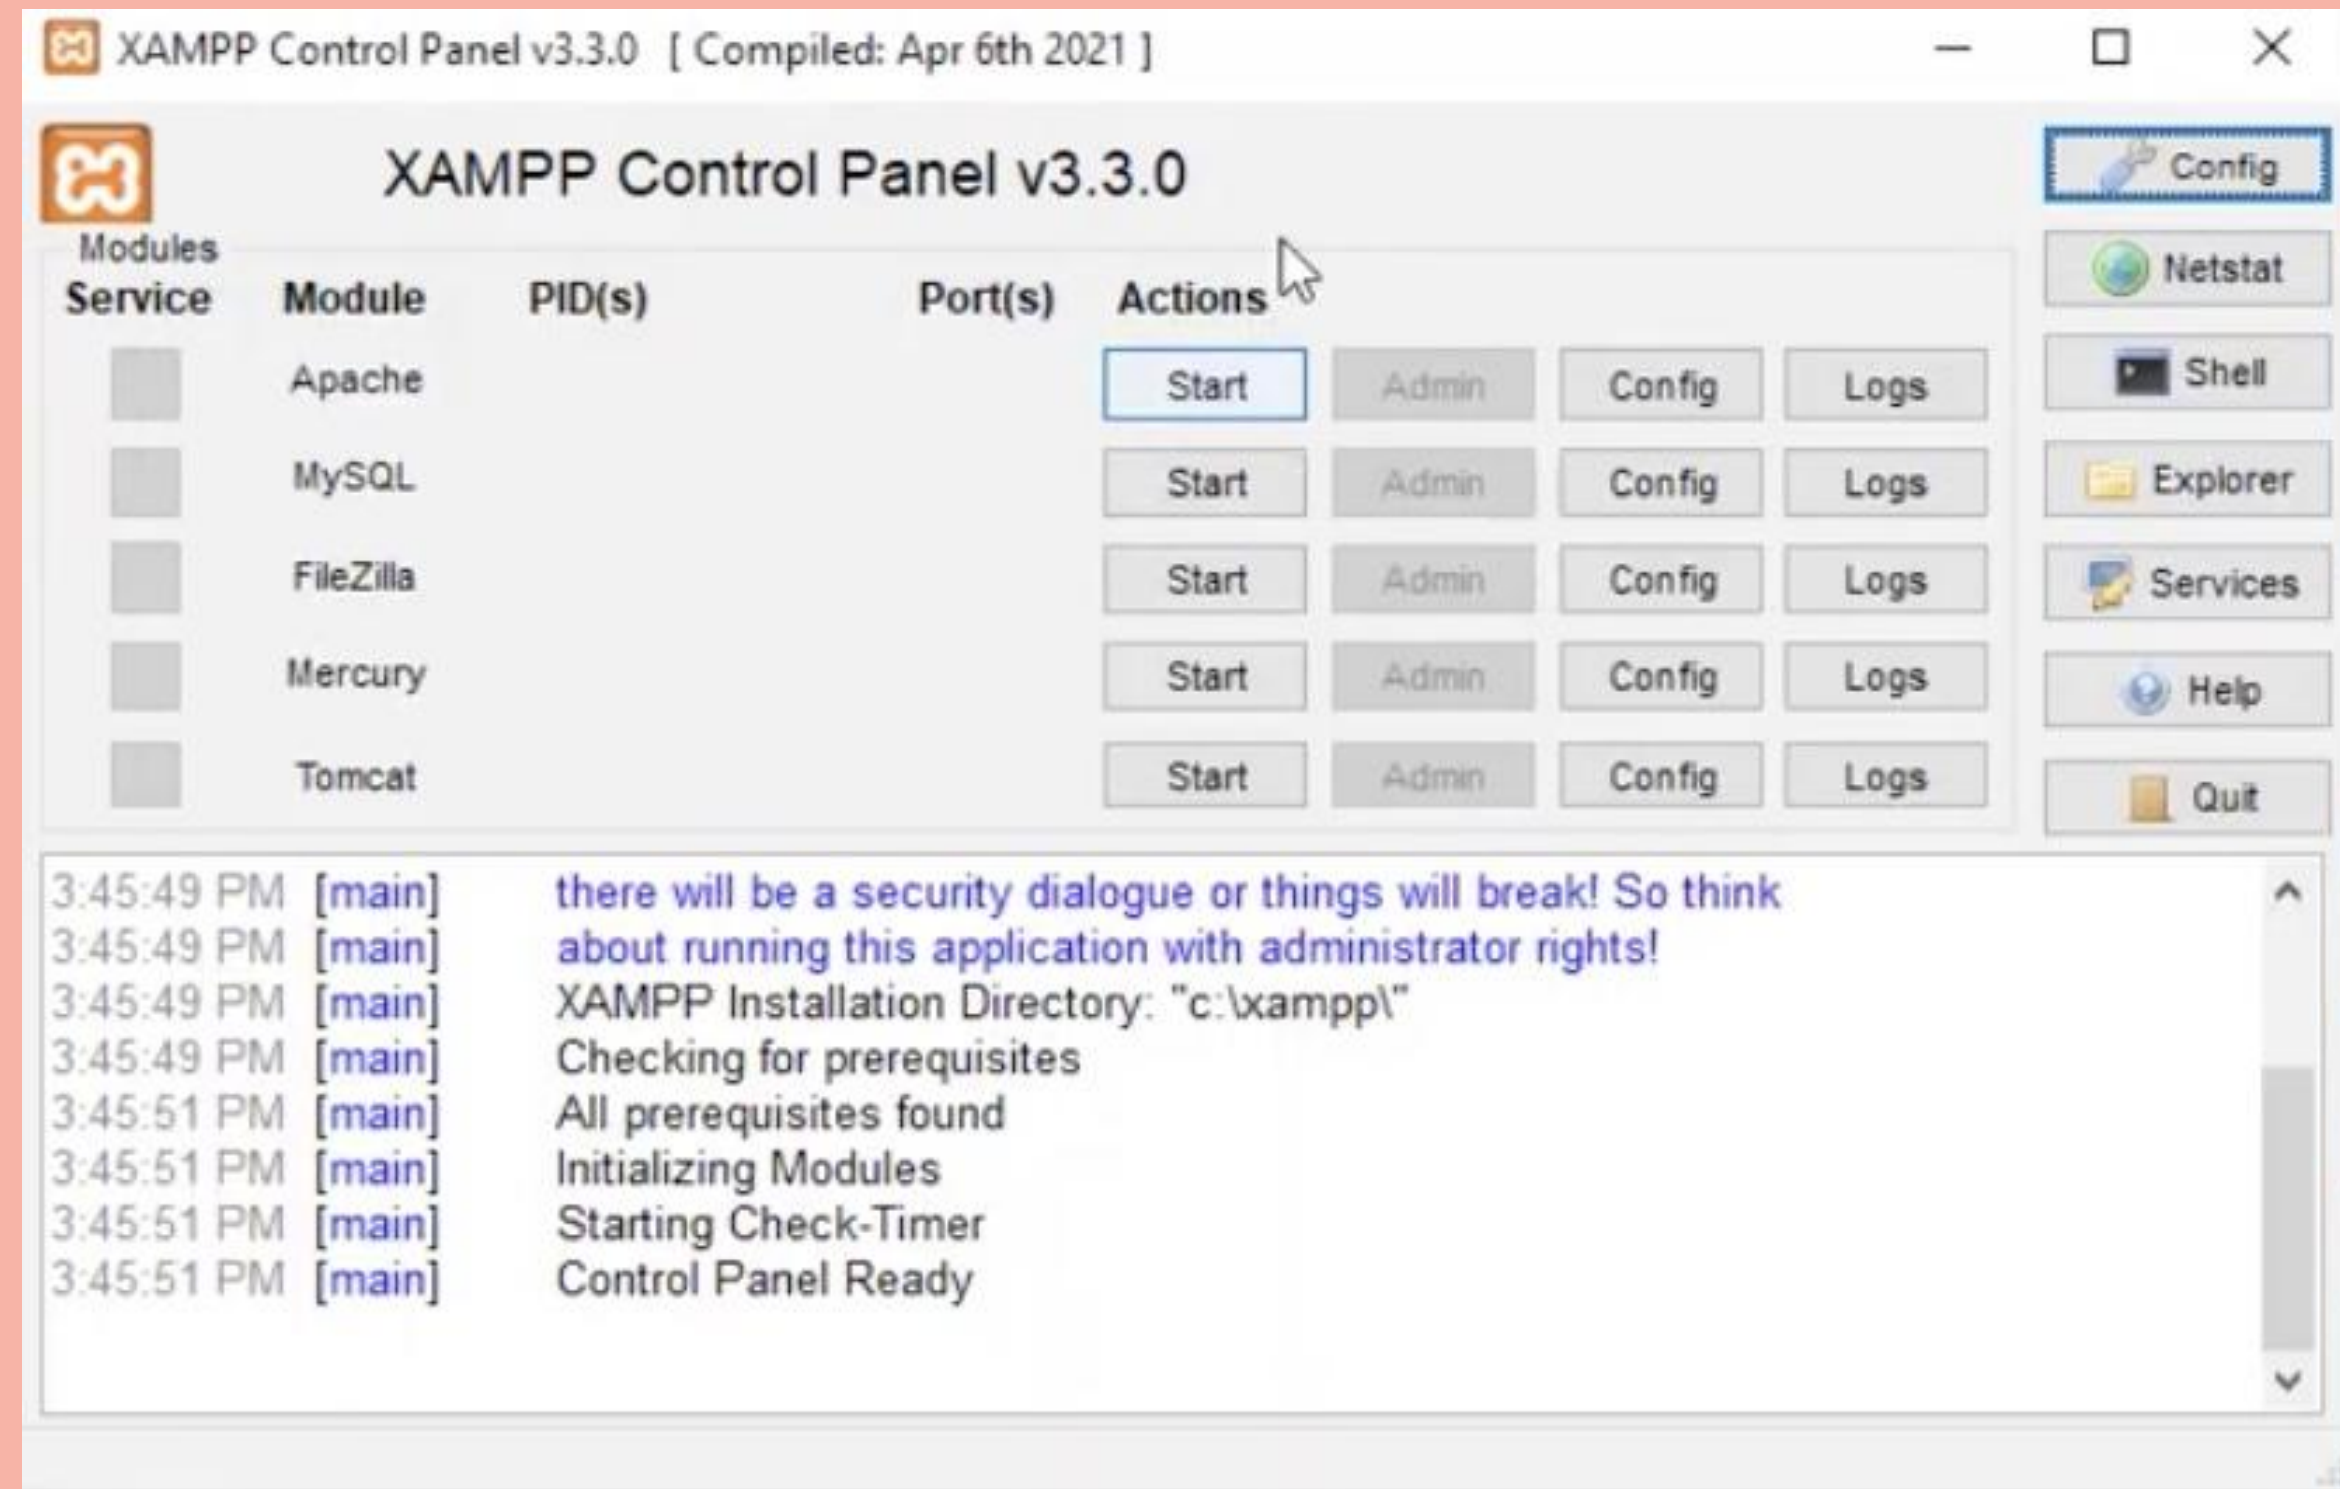

1. Run the downloaded XAMPP installer.
2. Click Next through the prompts.
3. By default, XAMPP installs to C:\xampp (Windows) or /Applications/MAMP (Mac).

Step 3

XAMPP Control Panel

1. Launch XAMPP; you'll see the Control Panel
2. The panel shows modules: Apache, MySQL, etc

Step 4

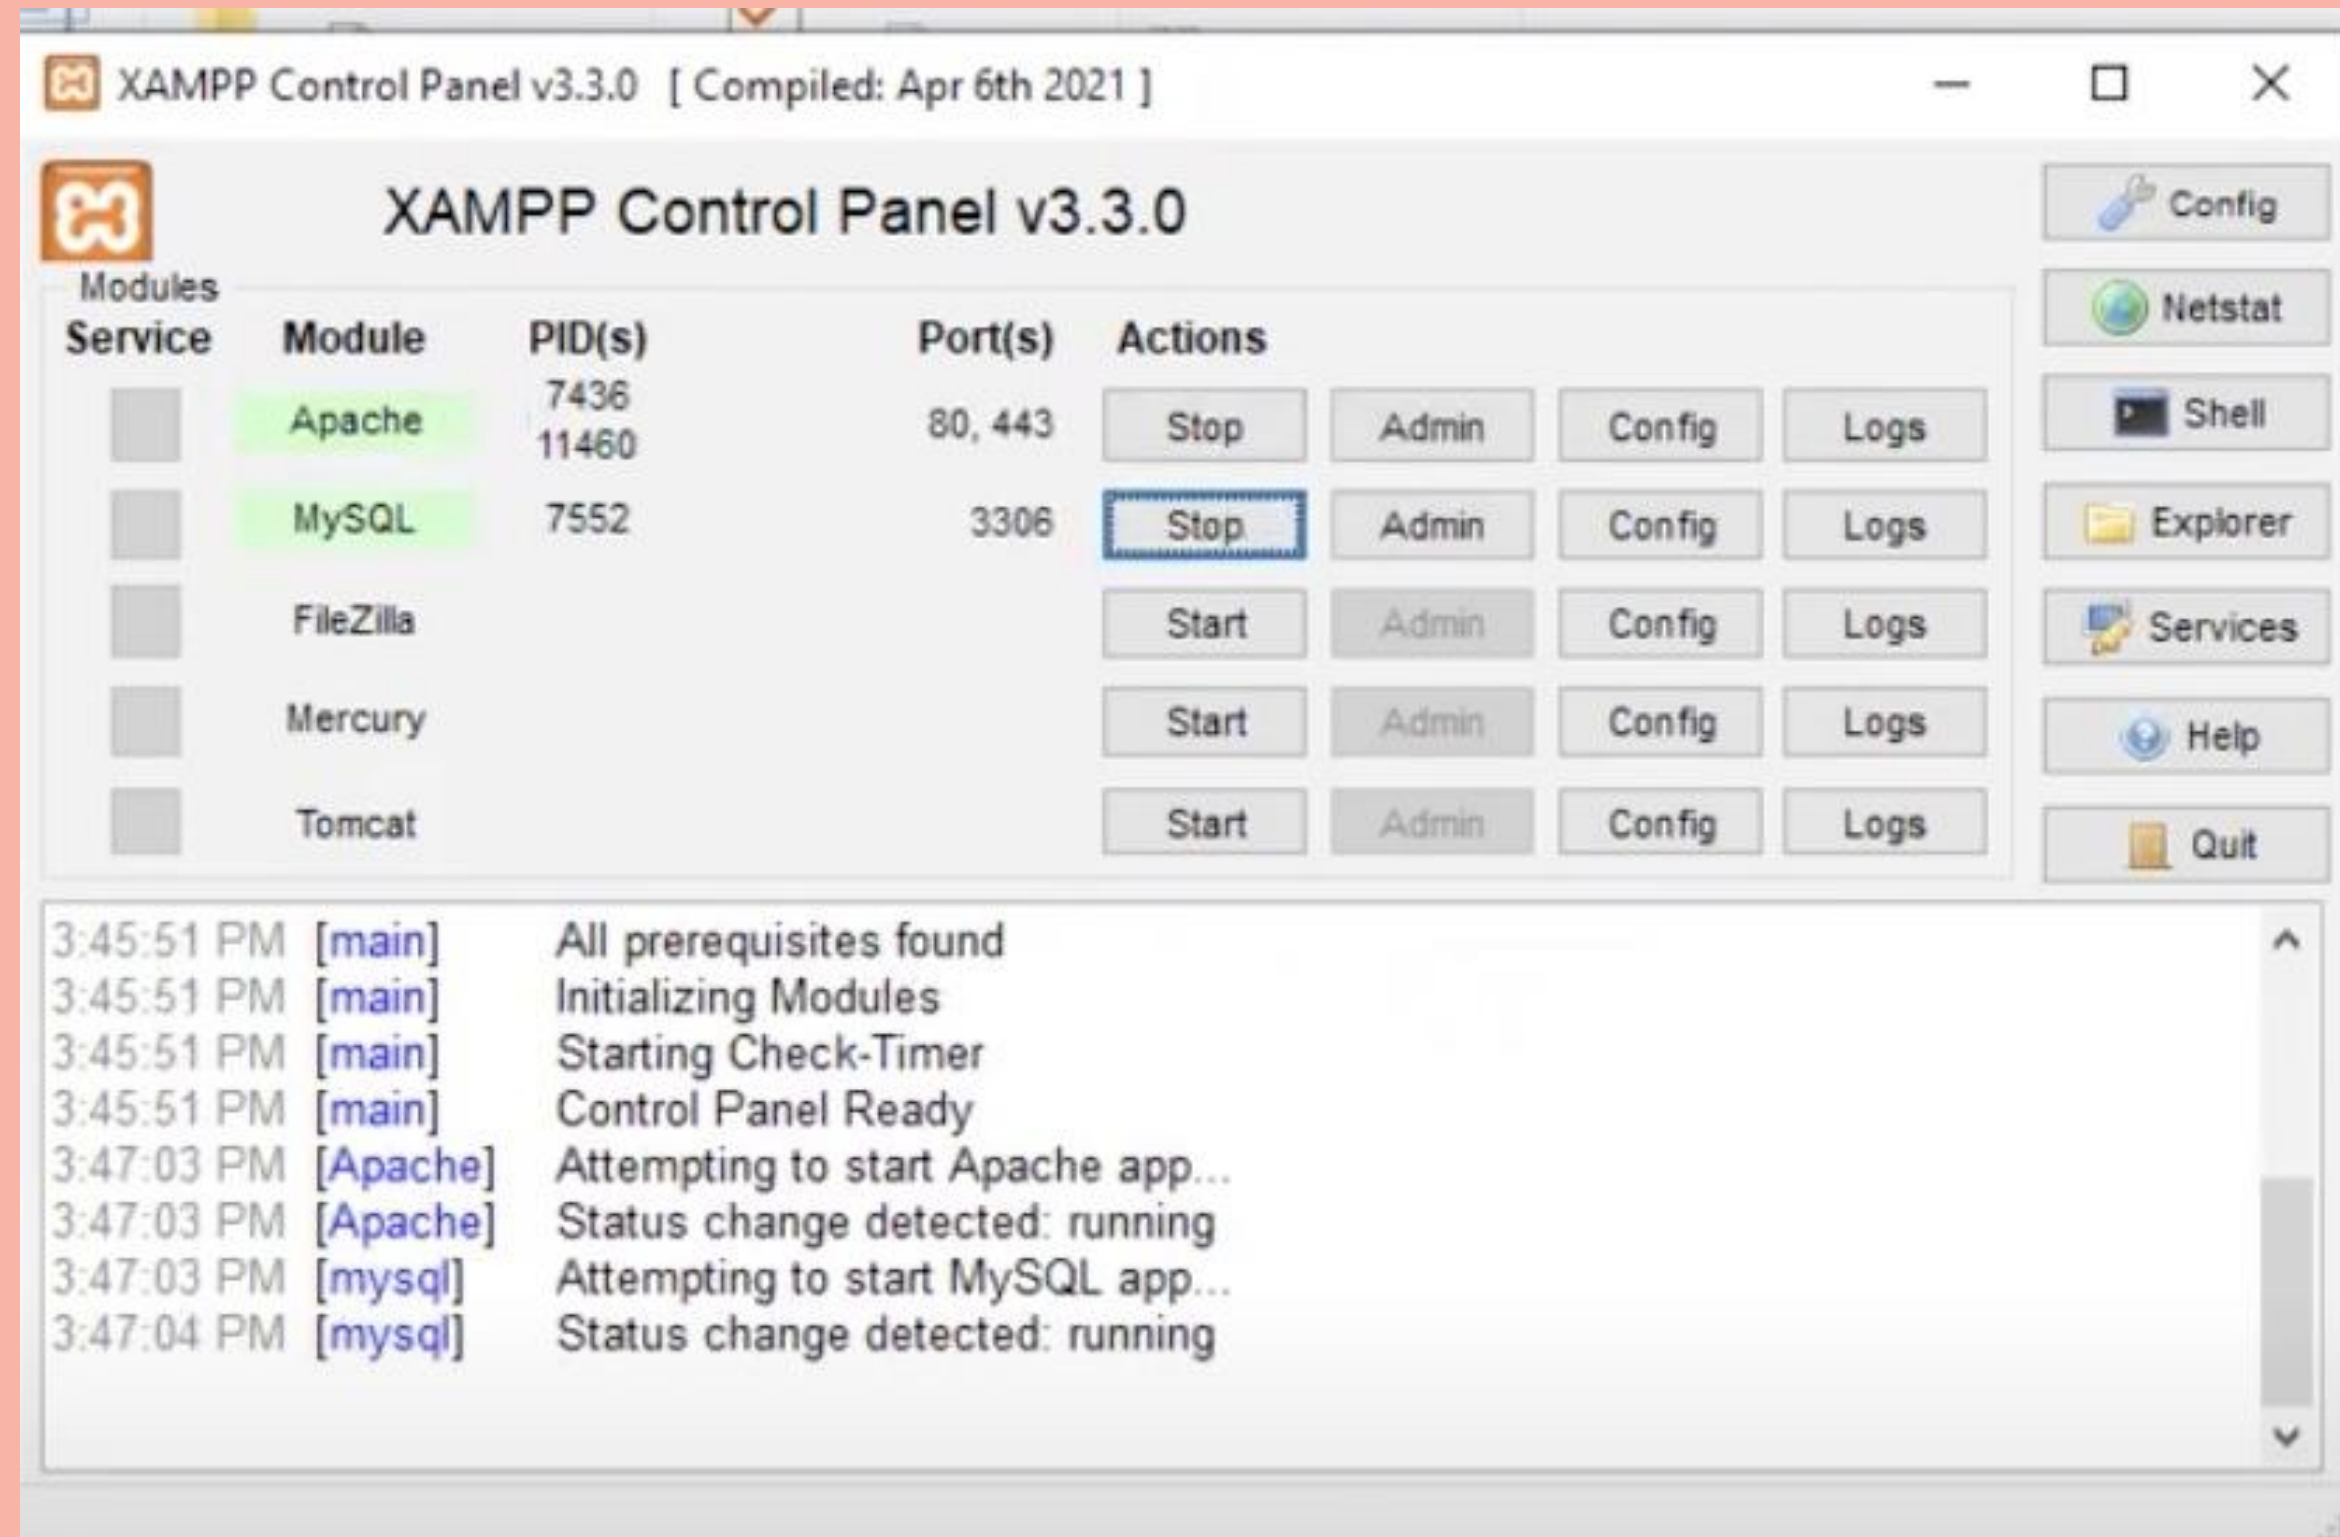

Download WordPress AND Extract

1. In your browser, go to wordpress.org, Click on “Get WordPress” and Download it
2. Extract the downloaded .zip file
3. Navigate to *C:\xampp\htdocs and create a folder with a name of your choice (e.g., Learnwithnimra)
4. Copy the wordpress folder files and paste it in “Learnwithnimra” folder

Step 5

Start Apache & MySQL

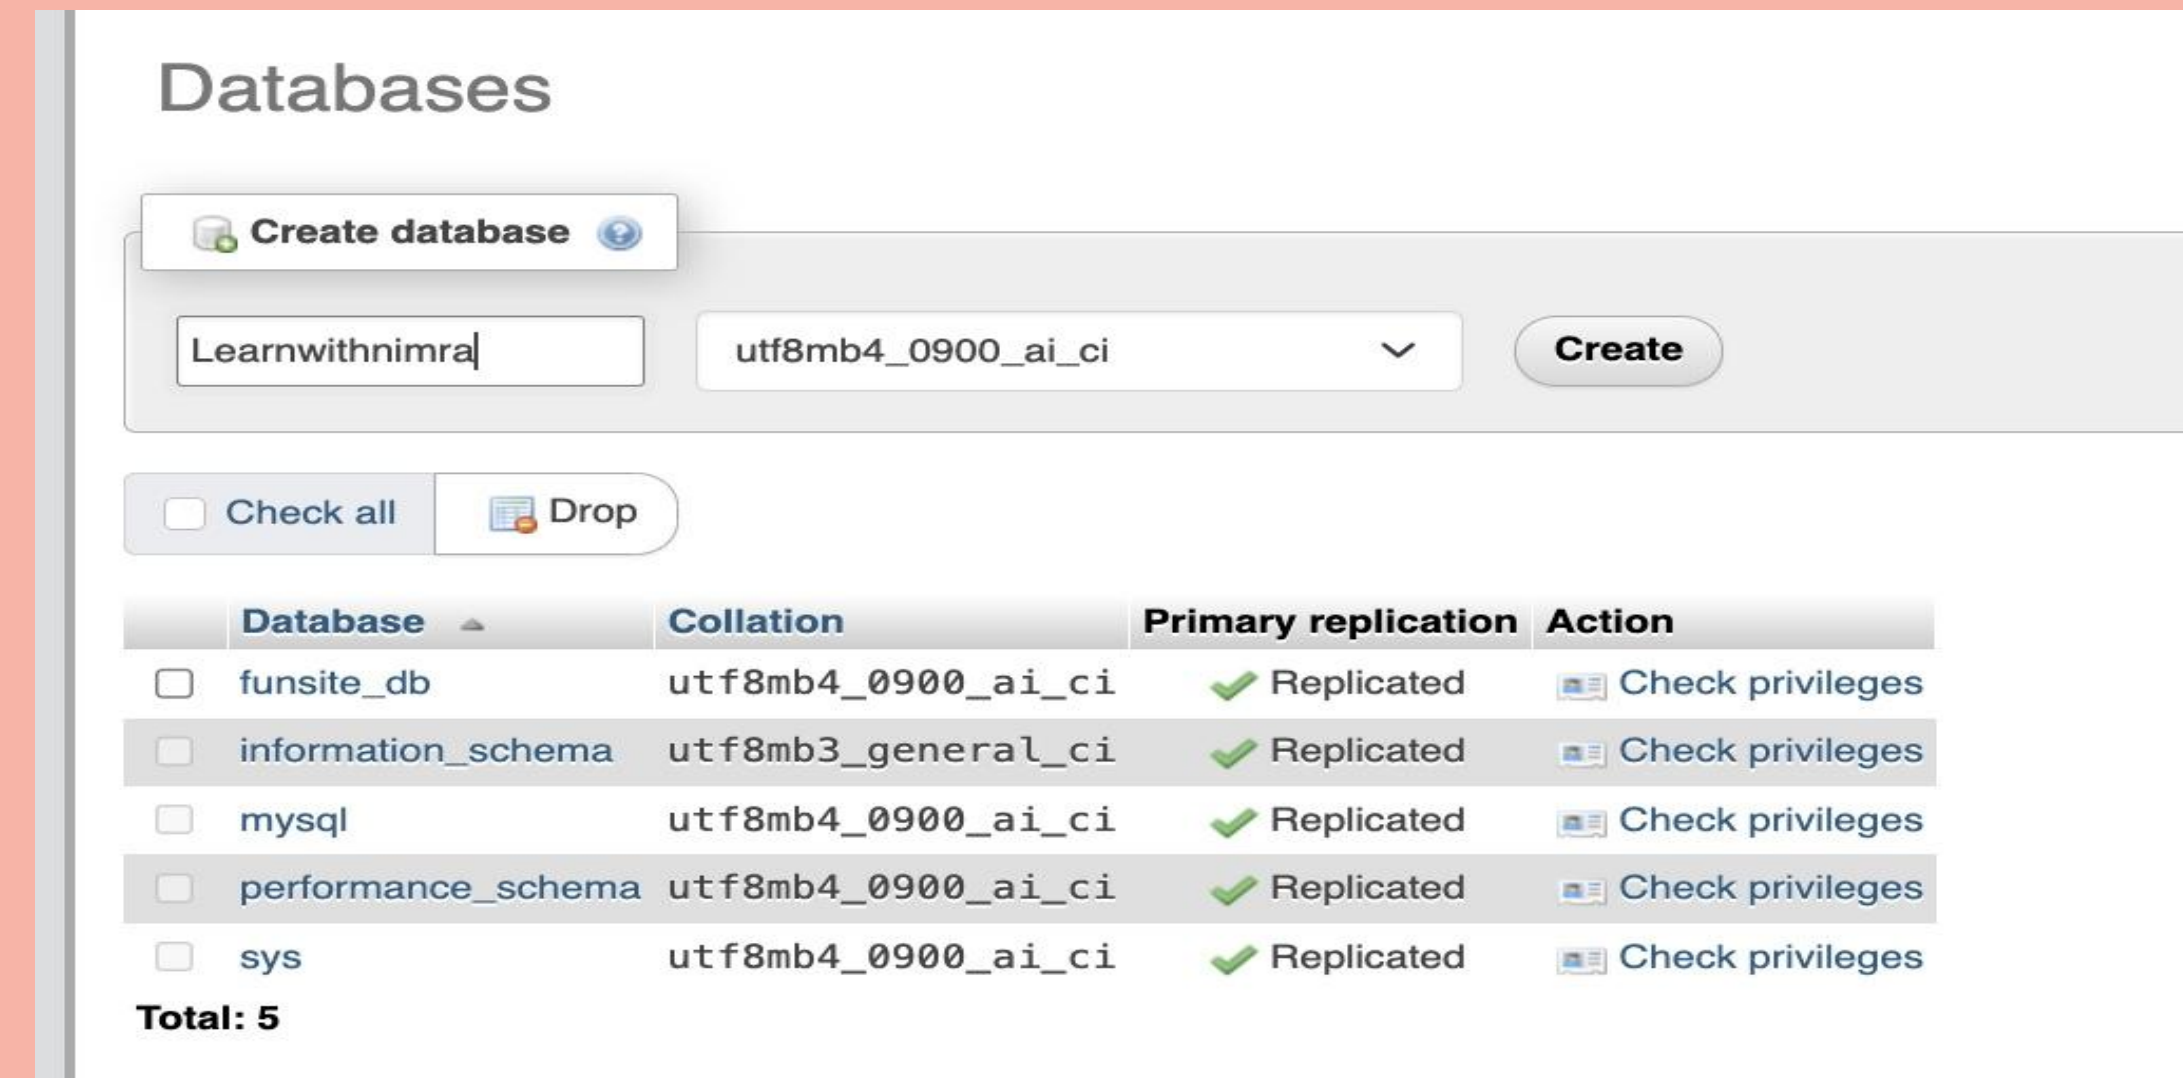

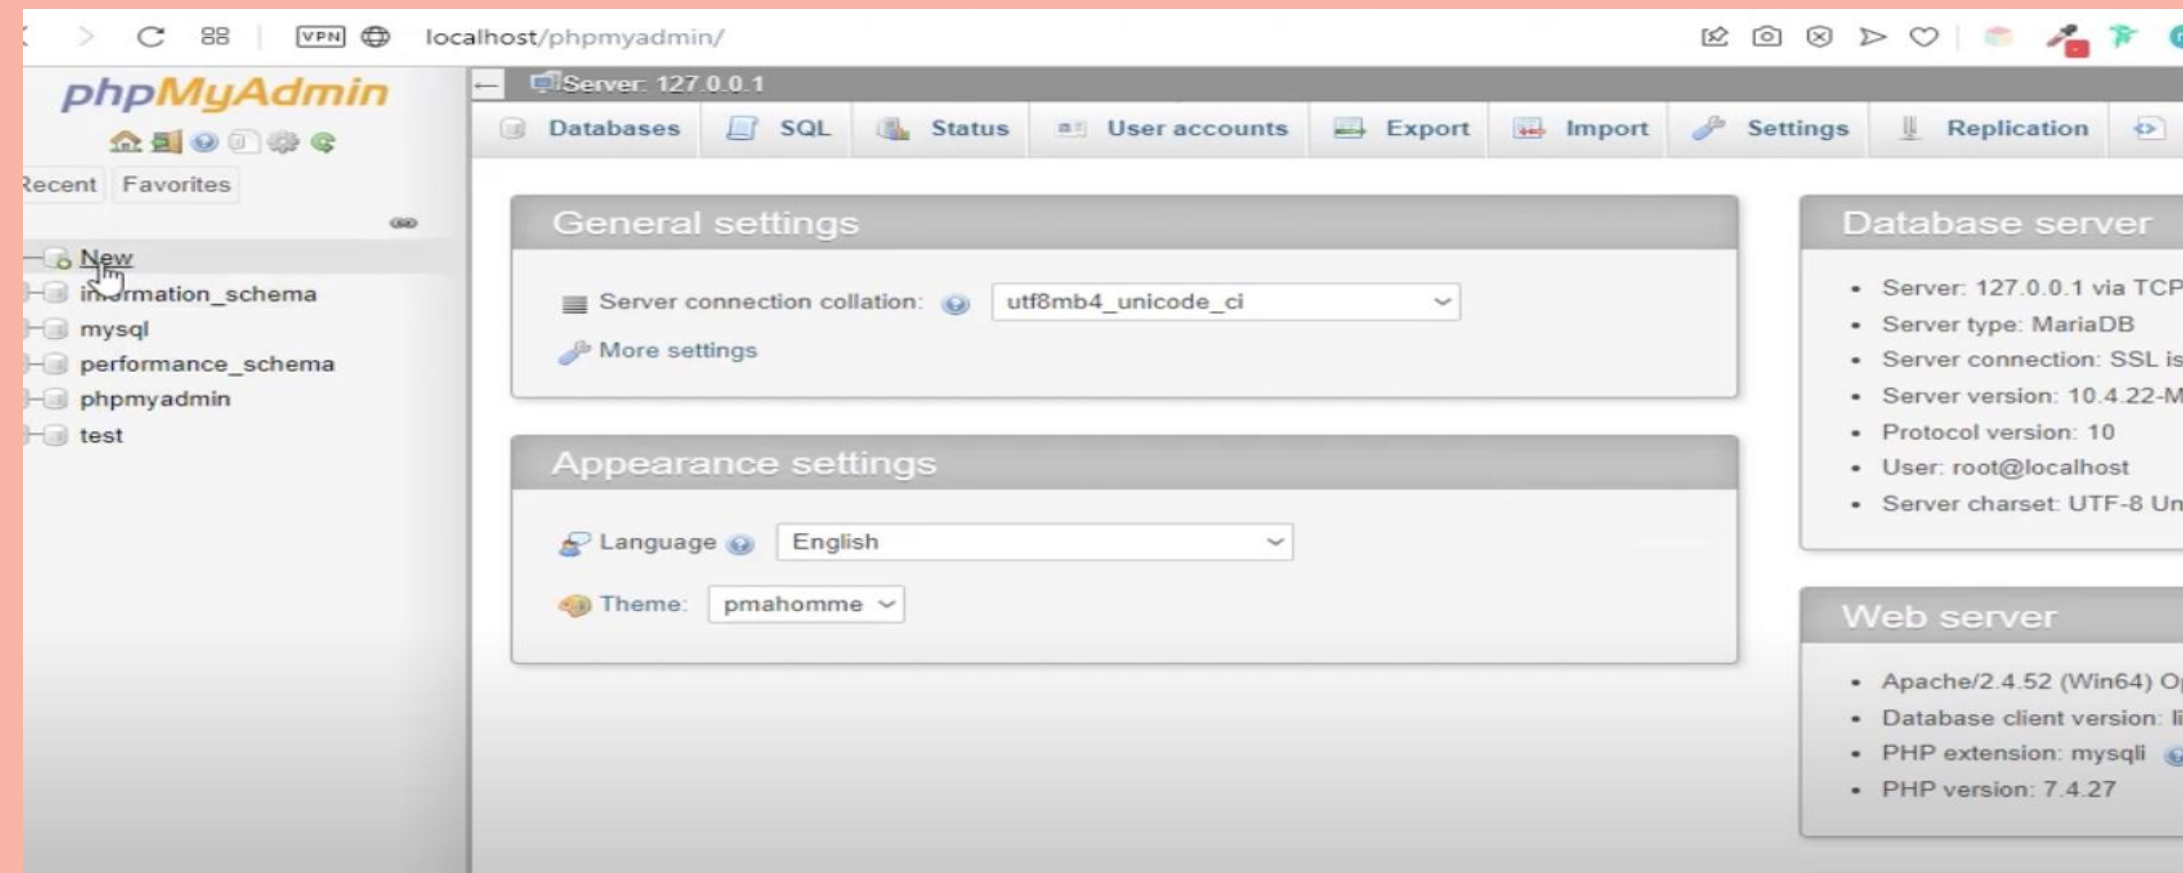

1. In XAMPP Control Panel, click Start next to Apache and MySQL
2. Ensure both modules show Running in green

Step 6

Open phpMyAdmin

1. In your browser, go to “localhost/phpmyadmin” and the phpMyAdmin dashboard appears
2. Click New in phpMyAdmin
3. Enter Database name matching your folder (e.g., Learnwithnimra)
4. Click Create

Step 7

Run WordPress Installer

1. Go to localhost/Learnwithnimra in your browser
2. Select English and click Continue
3. Click Let's go!

Step 8

Database Connection

1. Enter the following:

- Database Name: Learnwithnimra
- Username: root
- Password: (leave blank)
- Database Host: localhost
- Table Prefix: wp_

2. Click Submit

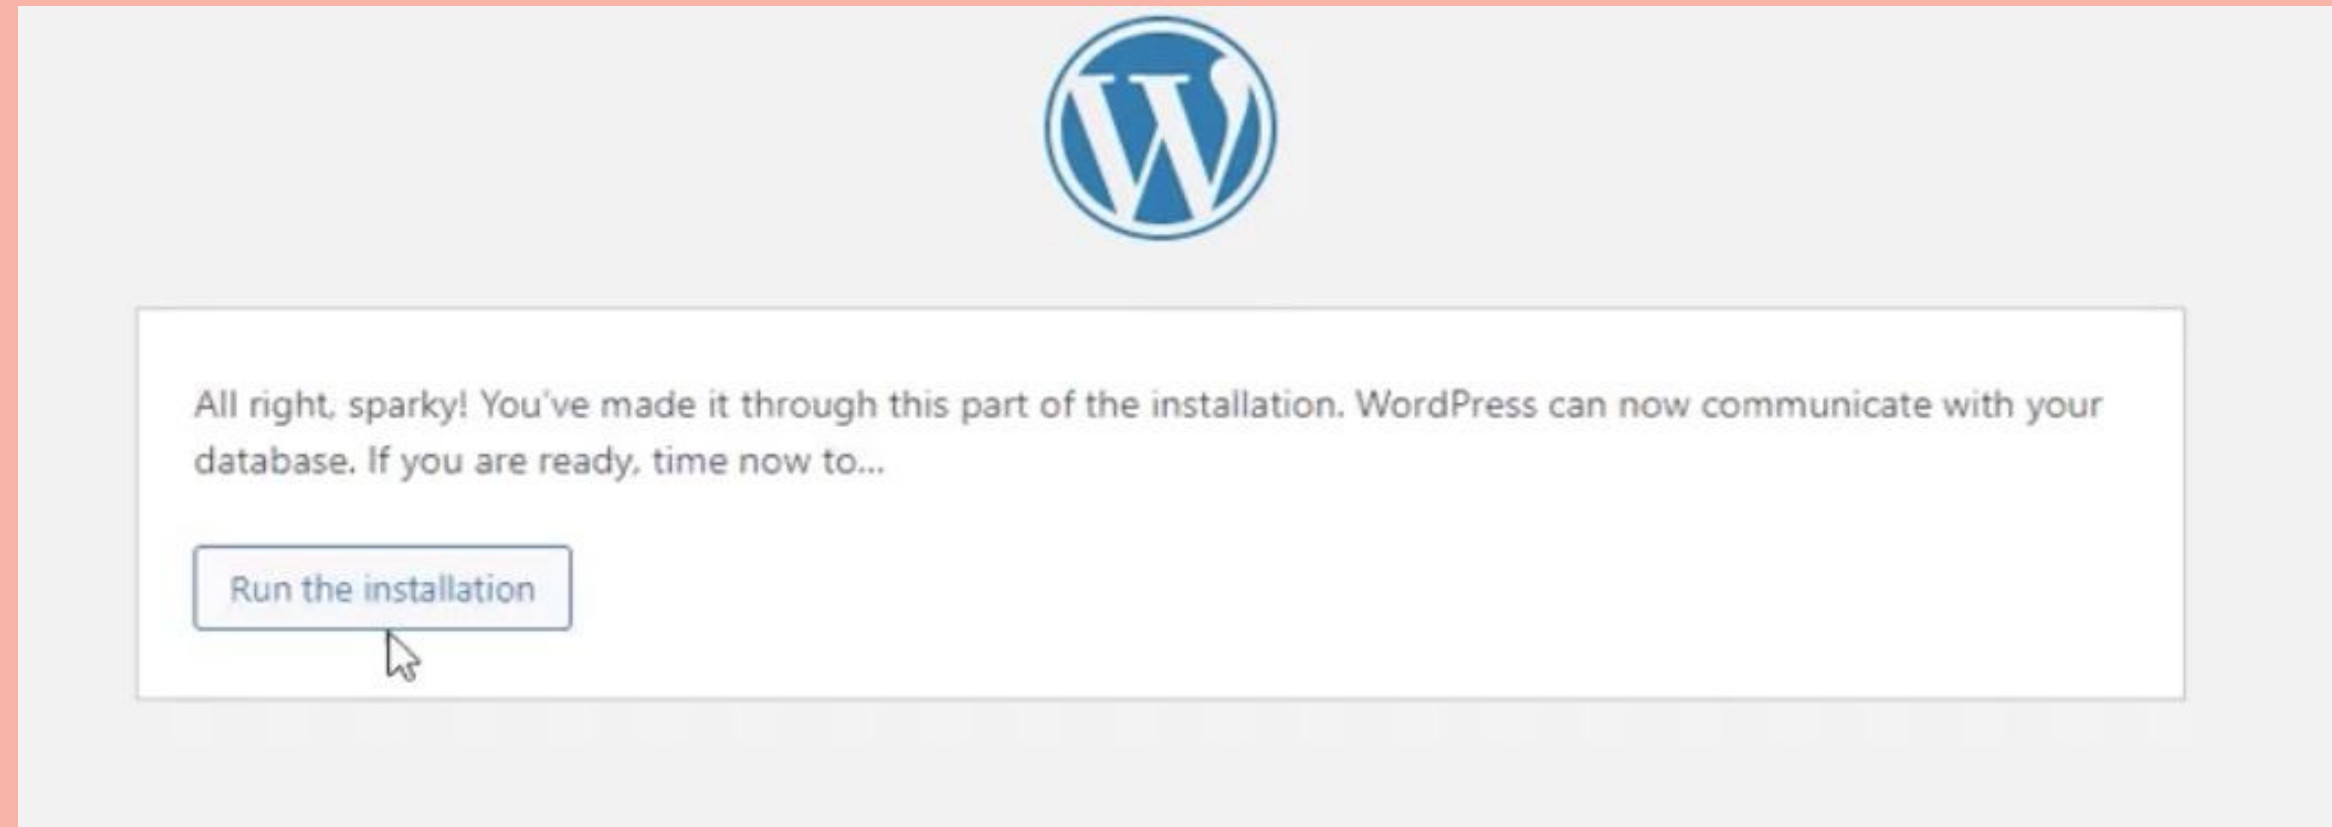

Below you should enter your database connection details. If you're not sure about these, contact your host.

Database Name	wordpress	The name of the database you want to use with WordPress.
Username	username	Your database username.
Password	password	Your database password.
Database Host	localhost	You should be able to get this info from your web host, if localhost doesn't work.
Table Prefix	wp_	If you want to run multiple WordPress installations in a single database, change this.

Step 9

Install WordPress

1. Once you click on submit, the following page will open
2. Click on, “Run the Installation”

Step 10

Fill up all the Details

1. Fill in:

- Site Title
- Username (e.g., admin)
- Password
- Your Email

2. Click Install WordPress

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Don't worry, you can always change these settings later.

Site Title

Username

Username can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

Password
