Difference b/w Traditional Marketing and Digital Marketing

Traditional Marketing	Digital Marketing
• Limited Reach • Expensive • Delayed Communication • Poor Campaign Measurement • Difficult to reach target audience	• Maximum Reach • Cost-efficient • Instant Communication • Easy Campaign Measurement • Easy to reach target audience

Defining Digital Goals

- Importance of Digital Goals
- Aligning Digital Goals with Business Objectives
- Types of Digital Goals

Business Goals Alignment

Aligning Digital Presence with Business Objectives

Examples of Alignment:

- Increase Sales → Boost Website Traffic
- Brand Awareness → Social Media Engagement
- Customer Support → Chatbot Integration

Short-Term vs Long-Term Goals

Short-Term Goals:

- Social Media Account Setup
- Initial Website Launch
- Email List Creation

Long-Term Goals:

- Brand Awareness
- SEO Improvements
- Customer Loyalty Programs

SMART Goals

Specific: Clear and well-defined objectives

Measurable: Quantifiable targets

Achievable: Realistic and attainable

Relevant: Aligned with business strategy

Time-Bound: Defined deadlines

Example: Increase website traffic by 20% within 3 months.

Identifying Target Audience

What is SEO?

Why SEO Matters for Business Websites

On-Page SEO Basics

What is SEO

- * Search engine optimization (SEO) – is the process of affecting the visibility of a website or a web page in a search engine's unpaid results - often referred to as "natural", "organic", or "earned" results

Structure of a SERP (Search Engine Result Page)

- * Keyword / Search Query
- * Paid Product Listings
- * Paid Search Results
- * Organic Search Results

1.) Crawl Links and Websites

Search engine bots crawl through the World Wide Web to find new websites based on the text on the website or links to websites

2.) Index and Cache Web Pages

As bots find pages on the web, they decide whether or not they want to include that web page within their index based on their own set of criteria

3.) Apply Ranking Algorithm

Once a search engine has built up its index, it will rank the pages according to the relevancy to the search keyword and serve up the best results on SERP

3 Keys to Higher Search Engine Rankings

Code

Create a cleanly
coded, search
engine friendly
website

Community

Be found on the web,
promote your great
content

Content

Produce great
content

Title Tags

Why is it important?

Title is the **most important** on-page ranking factor and is the main text that describes an online document.

What it looks like in the source code:

Recommendation

- Use rich keyword phrases that best describe the web page
- Make them unique for each page and use a strong CTA (Call to Action) based on buyer intent
- Try to keep them around 55-65 characters long

Tags

What is it?

On-page HTML tags are located within the body copy that identify the most important text on the page. The H1 is the headline of the page. There are 6 header tags, ranging from H1 (the most important) to H6 (least important).

What it looks like in the source code:

Recommendation

- Use H1 only once per page
- Make sure the H1 is keyword rich and unique
- You can use H2 and H3 tags multiple times, but keep them unique from page to page
- Keep header tags in order

Meta Description

What is it?

A description of what your web page is about. It will also show up as the page summary on the SERP.

Why is it important?

An engaging and descriptive meta description will attract more clicks when your pages shows up in search results. Think of it as a mini ad.

Recommendation

- Include strong call-to-actions
- Make sure keyword is included early in the first line
- Make them unique for each page
- Try to keep them around 120-150 characters long
