

Assignment-2

Max Marks: 10

Due Date: 07th May 2025

Full Name: Saad Mughal

Registration No.: F2023-009

Objective(s):

- Understand how to represent real-world data using a structured and readable format.
- Learn how to create, edit, and validate JSON for data exchange in modern applications.
- Gain skills in designing and interpreting JSON schemas for building APIs, config files, and database records.

Note: No submission is accepted after the deadline.**Tool(s):**

- ▣ VS Code (Visual Studio Code) ★ *Highly Recommended*
- ▣ Sublime Text
- ▣ Notepad++

Task:Create a **valid JSON file** that represents any real-world scenario **of your choice** — such as:

- Employee records
- Product inventory
- Student data
- Bookstore or library system
- Online order details

Instructions:

- 1) Choose a real-world scenario and design a meaningful JSON structure with at least **5 fields**.
- 2) Create a JSON file (`.json`) that includes **at least one full object or array of objects**.
- 3) At the top of your JSON file, include your **name** and **roll number** using a field like this:

```
{  
  "name": "Your Name",  
  "roll_no": "YourRollNo",  
  ...  
}
```

}

4) Make sure your JSON is:

- **Well-formatted**
- **Valid (no syntax errors)** — you can test it using <https://jsonlint.com>

5) Submit your JSON file to Google Classroom.

Grading Criteria:

Sr.No.	Category	Obtained Marks
1	JSON validity (no syntax errors). [05]	
2	Proper structure and indentation. [05]	
Total [10]		

Good Luck
