DAILY KHATA

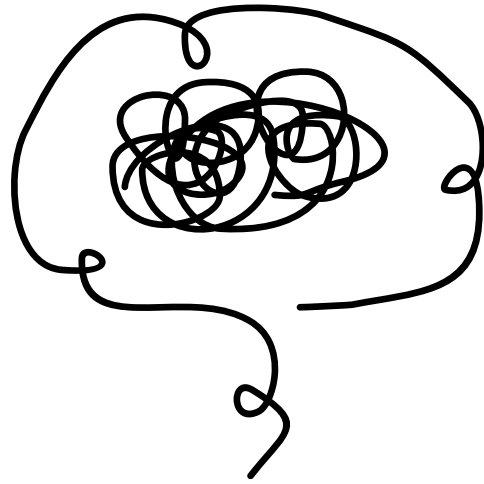

AI-Powered Expense Tracking for Pakistan

Saad Mughal | F2023-009

Khadijah Zahoor | F2023-956

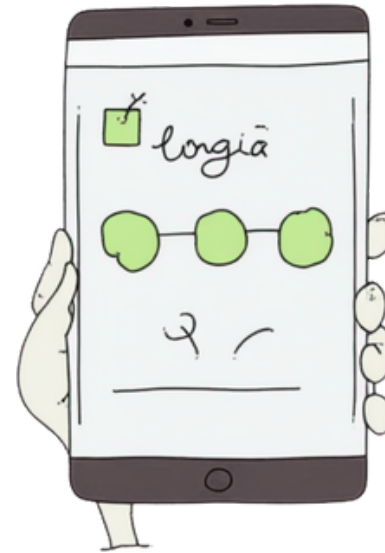

THE PROBLEM

High Cognitive Load

Manual entry is tedious, people stop tracking after a few days.

OCR Fails Here

Handwritten Urdu/English receipts from local dairies & hardware stores can't be read by standard apps.

Apps Are Intimidating

Existing tools require rigid categorization, non-experts give up before they begin.

System Goals

1

Camera-to-AI

Snap any receipt, printed, handwritten, faded, and AI extracts line items automatically.

3

Live Spreadsheet UI

Power-user grid for high-density data entry and bulk edits.

2

Voice-First Entry

Say 'I spent 500 on vegetables' and it's logged. No typing required.

4

Touch-to-Edit

Tap any AI-extracted field to correct it instantly, rapid error recovery built in.

WHO WE'RE DESIGNING FOR

Group A -Homemakers

- Primary household budget managers
- Use khata notebooks or loose receipts
- Limited digital literacy; find apps intimidating
- Frequent local market shoppers

Group B - Students/Freelancers

- University students & SME owners
- Need granular financial oversight
- Have tried & abandoned finance apps
- Want fast, frictionless logging

ANNUAL ECONOMIC DATA

Tool	what it does	why it fails our users
Khata notebook	Manual written ledger	No search, no analytics, no aggregation
Banking apps	Tracks digital payments only	Misses all cash & informal transactions
Generic OCR scanners	Reads printed receipts	Fails on handwritten Urdu/English mix
Cashew / Wallet	Full-featured budget apps	Tedious manual categorization; high drop-off
Daily Khata	AI camera + voice logging	Designed for Pakistani informal retail

Needs Finding Study Plan

Study Goals

- How do users currently track daily expenses?
- What friction points cause them to abandon tracking?
- How do they mentally categorize physical receipts?
- What are their attitudes toward AI & voice input?

Recruiting (4 participants)

- 2× Homemakers (analogue methods)
- 2× Students / freelancers (tried + quit apps)
- Must actively manage a monthly budget
- Regularly receive physical receipts

Interview Protocol (30–45 min)

1. Intro & consent
2. Warm-up — typical week & tools used
3. Last shopping trip walkthrough
4. Workflow observation (show us your system)
5. Friction & abandonment moments
6. Concept intro — camera & voice AI
7. Conclusion & next steps

THANK YOU
