The Chaos of the Local Retail Landscape

LOST
HAPHAZARDLY
LOST

Handwritten or faded receipts are lost within hours or stored haphazardly.

30-40%

Informal cash transactions (rickshaws, roadside stalls) make up 30-40% of daily spending but produce zero paper trail.

"I just put it in my purse. By the time I get home, half of them are crumpled."

— P2 (Homemaker, 30s)

Who We Talked To: Needs Finding Demographics

10 participants divided into two distinct groups driving our design constraints.

Group A: Homemakers & Shopkeepers

Profile: Low-to-moderate digital literacy. Ages 30-50.

Current Method: Physical notebook (Khata) or mental tracking.

Key Need: Zero-complexity tracking.

Group B: Students & Freelancers

Profile: High digital literacy. Ages 21-30.

Current Method: Abandoned apps (Wallet, Cashew), Notion, or spreadsheets.

Key Need: Speed and raw data access.

Why Users Abandon Finance Apps

Synthesizing 180 raw interview notes into core friction points.

The Trust Paradox

Users despise manual data entry, but they fundamentally distrust complete AI automation—especially with handwritten, mixed-language receipts.

*"If it reads wrong and I don't notice, my whole month's budget is off.
I need to be able to check." — P4*

A Tale of Two Users: The Digital Spectrum

Rukhsana (Ammi Jaan, 43)

Profile: Full-time homemaker, low digital literacy.

Pain Point: Apps feel “too English” and complicated. Handwritten receipts fade.

Goal: Understand weekly spending instantly.

Zaid (The Hustle Student, 22)

Profile: CS Student / Freelancer, high digital literacy.

Pain Point: Categorization takes too long. Mixed PKR/foreign income.

Goal: Separate personal and freelance expenses for taxes.

Shared Requirement: “I want to spend 5 seconds logging, not 5 minutes.”
Both require logging without manual typing.

Introducing DailyKhata

The Design Concept

Multimodal Inputs

Camera, Voice, and Manual input are equally accessible first-class options on the home screen.

Progressive Disclosure

Default UI is minimal (one tap to log). A hidden 'Pro View' reveals spreadsheet management for power users.

No Forced Choices

"Misc" is always a valid bucket. Zero mandatory onboarding login.

Architecture: The Multimodal Input Engine

Stage 1: The Inputs

Stage 2: Processing

Stage 3: The Crucial Gate

Stage 4: Output

Flow 1: The Crumpled Receipt (Under 30 Seconds)

User returns with a messy handwritten local receipt. Taps camera icon on home screen (no navigation needed).

App scans receipt. AI extracts item, amount, and date.

Uncertain handwriting is highlighted in yellow. User taps the yellow field, corrects the amount via numpad.

Taps "Confirm." Home screen daily total updates. Habitual peace of mind achieved.

Flow 2: The Rickshaw Ride (Under 15 Seconds)

Flow 3: The Plain-Language Review

1. The Trigger

End of month review to understand household spending. Taps 'This Month.'

2. The Interface

App shows a plain-language summary in text, not complex charts. "You spent Rs.28,400 this month. Food: 45%, Transport: 20%, Misc: 35%."

3. The Drill-Down

User taps 'Misc' to view individual untagged transactions.

4. The Value

User re-categorizes a plumber visit to 'Utility.' The text summary auto-updates instantly.

The White Space:

Why Existing Tools Fail Here

	Wallet	Cashew	Notion (DIY)	Physical Khata	DailyKhata
AI Handwritten/Urdu OCR					✓
Voice Input (Conversational)					✓
Inline Edit / Verification					✓
Local Defaults (Ration, etc.)					✓
Offline-First Architecture				✓	✓

Built for Reality: The 'Invisible App' Constraints

The Impact: Empowering Local Financial Literacy

Capturing the Invisible Economy

By making informal cash and crumpled receipts effortless to log via voice and camera, we capture the **40%** of spending other apps ignore.

Bridging the Trust Deficit

Mandatory human verification ensures users maintain control, turning AI from a black box into a helpful assistant.

Accessible to All

Plain-language summaries, local categories, and offline functionality mean anyone from a CS student to an Ammi Jaan can finally master their budget.

DailyKhata Concept Complete

Ready for Prototyping & User Testing
