

HCI & Computer Graphics

Milestone 3

Initial Prototype & User Test Plans

Team Name: patches

Team Number: 10

Members: Saad Mughal (F2023-009) | Khadijah Zahoor (F2023-956)

Course Lecturer: Sania Khalid

Lab Instructor: Sania Khalid

Section: C

Project: DailyKhata — Multimodal Expense Tracker

Due: TBD

Table of Contents

Section 1: Wireframes

- 1.1 Key Screens
- 1.2 Navigation Flows

Section 2: Prototype

- 2.1 Prototype Scope — 6 Key Tasks
- 2.2 Dummy Data Summary
- 2.3 Prototype Link

Section 3: User Test Plan

- 3.1 Test Plan Overview
- 3.2 Informed Consent Form
- 3.3 Logging Sheet
- 3.4 User Test Script
- 3.5 Post-Test Questionnaire (SUS)

Section 1: Wireframes

All wireframes were produced in **Figma Pro** using a low-fidelity convention: single typeface (Inter), no colour other than black and white, and rough placeholder shapes to encourage high-level feedback. Insert the corresponding Figma exports in each placeholder below. Ensure images are exported at 2x resolution so all text and details remain legible.

1.1 Key Screens

The twelve screens below represent the most frequently visited UI states in DailyKhata, including the home screen, all three input modalities, the AI verification step, the monthly summary, and the power-user Pro View.

WF-01 — Home / Dashboard

Central landing screen. Displays today's total spend, a '+' FAB with three input shortcuts (Camera, Voice, Manual), and a bottom nav bar. Entry point for all primary flows.

Figure WF-01: Home / Dashboard — Central landing screen. Displays today's total spend, a '+' FAB with three input...

WF-02 — Camera Capture

Full-screen camera viewfinder with a shutter button. A top-bar prompt reads: 'Point at receipt.' No other UI elements to minimise distraction.

Figure WF-02: Camera Capture — Full-screen camera viewfinder with a shutter button. A top-bar prompt reads: 'Po...

WF-03 — AI Parsing / Verification

Shows extracted fields (Item, Amount, Date, Category) in editable cards. Fields with low OCR confidence are highlighted with a dashed border. Confirm and Edit buttons at the bottom.

Figure WF-03: AI Parsing / Verification — Shows extracted fields (Item, Amount, Date, Category) in editable cards. Fields ...

WF-04 — Voice Input

Pulsing microphone animation with live transcript. A 'Tap to finish' button stops recording; parsed result appears inline.

Figure WF-04: Voice Input — Pulsing microphone animation with live transcript. A 'Tap to finish' button stop...

WF-05 — Manual Entry Form

Three fields: Amount (numpad), Category (dropdown with local defaults), Note (free text). Save button at bottom.

[Figma export: WF-05 — Manual Entry Form]

WF-06 — Confirm / Save Screen

Summary card (Amount, Category, Date, Note) with two actions: 'Confirm' (saves to ledger) and 'Edit' (returns to prior screen).

[Figma export: WF-06 — Confirm / Save Screen]

Figure WF-06: Confirm / Save Screen — Summary card (Amount, Category, Date, Note) with two actions: 'Confirm' (saves t...

WF-07 — Transaction List — Daily View

Chronological list of the day's entries. Each row: amount, category icon, time, note excerpt. Tap a row to open Edit Entry.

[Figma export: WF-07 — Transaction List — Daily View]

Figure WF-07: Transaction List — Daily View — Chronological list of the day's entries. Each row: amount, category icon, time, ...

WF-08 — Monthly Summary

Plain-language summary: 'You spent Rs.X this month.' Below, a text-based breakdown per category with percentage. Chart toggle is off by default (per M02 design decision).

Figure WF-08: Monthly Summary — Plain-language summary: 'You spent Rs.X this month.' Below, a text-based breakdo...

WF-09 — Category Drill-Down

Lists all transactions under a selected category. Supports re-categorisation via long-press on any row.

Figure WF-09: Category Drill-Down — Lists all transactions under a selected category. Supports re-categorisation via...

WF-10 — Settings / Category Manager

Add, rename, or hide categories. Toggle Urdu/English label. Offline sync status indicator at the bottom.

[Figma export: WF-10 — Settings / Category Manager]

1.2 Navigation Flows

Five key navigation flows are documented below. Each flow corresponds to a core task in the prototype and the user test. Miniaturised wireframe images should be inserted side-by-side with arrows indicating transitions.

Flow A: Camera Receipt Logging

User taps Camera icon on home → captures receipt → reviews AI-parsed fields (corrects highlighted fields if needed) → confirms entry. Entry appears in WF-07 Transaction List.

Figure Flow A: Camera Receipt Logging navigation flow.

Flow B: Voice Expense Logging

User taps Microphone icon → speaks natural-language expense → reviews auto-parsed summary → confirms. Designed to complete in under 15 seconds.

Figure Flow B: Voice Expense Logging navigation flow.

Flow C: Manual Entry

User taps Manual icon → fills amount, category, note → confirms. Fallback for any situation where camera and voice are unsuitable.

[Navigation flow diagram: Flow C — Manual Entry]

Figure Flow C: Manual Entry navigation flow.

Flow D: Monthly Summary Review & Re-Categorisation

User taps 'This Month' → reads plain-language summary → taps a category to drill down → long-presses a transaction → re-labels it → summary updates.

WF-01 Home → WF-08 Monthly Summary → WF-09 Drill-Down → WF-06 Confirm (re-label)

[Navigation flow diagram: Flow D — Monthly Summary Review & Re-Categorisation]

Figure Flow D: Monthly Summary Review & Re-Categorisation navigation flow.

Flow E: Edit an Existing Entry

User scrolls transaction list → taps an entry → edits fields inline → confirms. Supports correction of any previously saved expense.

WF-07 Transaction List → WF-05 Manual Form (edit mode) → WF-06 Confirm

[Navigation flow diagram: Flow E — Edit an Existing Entry]

Figure Flow E: Edit an Existing Entry navigation flow.

Section 2: Prototype

The low-fidelity prototype was built in **Figma Pro** using prototype connections between frames to create a fully clickable, task-based experience. The prototype covers all six tasks defined for the user test and includes screens for likely error paths and wrong interactions.

2.1 Prototype Scope — 6 Key Tasks

The six tasks below were selected to cover the three primary input modalities, the verification step, the monthly review workflow, and the power-user export flow. Together they exercise all major branches of the DailyKhata UI.

#	Task Name	Persona	Flow	Key Screens
T 1	Log a receipt via camera	Rukhsana (homemaker)	Flow A	WF-01 → WF-02 → WF-03 → WF-06
T 2	Log an informal cash expense via voice	Zaid (student)	Flow B	WF-01 → WF-04 → WF-06
T 3	Add a manual expense entry	Rukhsana	Flow C	WF-01 → WF-05 → WF-06
T 4	Review monthly spending summary	Rukhsana	Flow D (partial)	WF-01 → WF-08
T 5	Re-categorise a miscellaneous entry	Rukhsana	Flow D (full)	WF-08 → WF-09 → WF-06
T 6	Export weekly data as CSV (Pro View)	Zaid	Flow E variant	WF-01 → WF-11 → Export

2.2 Dummy Data Summary

All dynamic elements in the prototype use realistic Pakistani-context data. The dummy data set is listed below and should be entered directly into Figma prototype frames.

Category	Sample Entries	Amounts (Rs.)	Notes
Ration	Weekly bazar — sabzi, dal, atta	650 / 1,200 / 340	Handwritten receipt (T1)
Transport	Rickshaw to university, bus fare	120 / 50	No receipt (T2)
Utility	Electricity bill, plumber visit	3,200 / 800	Manual entry (T3)
Misc	Untagged items (3 entries)	200 / 450 / 175	Re-categorise target (T5)

Freelance Income	Client payment (USD 45 → PKR)	12,555	Pro View entry (T6)
Monthly Total	All categories combined	28,400	Summary display (T4)

2.3 Prototype Link

Insert the publicly accessible Figma prototype link below. Ensure 'Anyone with the link can view' is enabled before submission.

[Insert Figma prototype link here — ensure public access is ON]

Section 3: User Test Plan

This section contains the complete user test plan for the first DailyKhata usability evaluation. It comprises five sub-documents: (3.1) Test Plan Overview, (3.2) Informed Consent Form, (3.3) Logging Sheet, (3.4) User Test Script, and (3.5) Post-Test Questionnaire (SUS).

3.1 User Test Plan Overview

Purpose and High-Level Goals

This usability test evaluates the **DailyKhata** low-fidelity prototype with representative users. The test is exploratory and formative — its primary aim is to identify usability problems before the high-fidelity build, not to produce statistically significant benchmarks.

- Determine whether users can successfully log an expense via camera, voice, and manual entry without assistance.
- Assess the clarity and trustworthiness of the AI verification step (highlighted fields, Confirm/Edit flow).
- Evaluate whether the monthly summary is understandable without a chart.
- Identify navigation breakdowns, labelling confusion, and friction points in the six core tasks.
- Gather subjective satisfaction data using the System Usability Scale (SUS).

Recruiting Criteria and Strategy

Participants will be recruited using convenience and snowball sampling from the existing participant pool used in Milestone 2, supplemented by additional contacts where needed.

Criterion	Group A (Low Digital Literacy)	Group B (High Digital Literacy)
Age range	28 – 50	18 – 28
Occupation	Homemaker / household budget manager	University student / freelancer
Device	Android smartphone (mid-range)	Android smartphone (any)
Expense tracking	Notebook or mental tracking	Has tried or currently uses a digital app
Language	Urdu-primary; basic English	Bilingual Urdu/English
Number of participants	2 – 3	2 – 3
Total target	5 participants (minimum)	

Exclusion criteria: Participants who are current DailyKhata team members or who have seen the prototype prior to the session are excluded. Participants must actively manage a personal or household budget.

Test Components

- Pre-test background questionnaire (2 minutes) — demographics and current expense tracking habits.
- Task-based prototype walkthrough — 6 tasks, think-aloud protocol (20–30 minutes).
- Post-test SUS questionnaire (5 minutes).
- Optional debrief discussion — 5 minutes, open-ended.

Sequence of Activities per Session

Step	Activity	Duration	Who
1	Welcome participant, introduce study, obtain signed consent	5 min	Moderator
2	Administer pre-test background questionnaire	2 min	Participant
3	Explain think-aloud protocol; run practice task	3 min	Moderator + Participant
4	Task 1: Log a receipt via camera	5 min max	Participant
5	Task 2: Log an informal cash expense via voice	5 min max	Participant
6	Task 3: Add a manual expense entry	4 min max	Participant
7	Task 4: Review monthly spending summary	4 min max	Participant
8	Task 5: Re-categorise a miscellaneous entry	5 min max	Participant
9	Task 6: Export weekly data as CSV (Pro View)	5 min max	Participant
10	Post-test SUS questionnaire	5 min	Participant
11	Debrief — open discussion, any final comments	5 min	Moderator
12	Thank participant, end session	1 min	Moderator

Task Instructions

The following instructions will be read aloud to participants verbatim at the start of each task. Moderators should not provide hints or guidance during a task unless the participant is stuck for more than 90 seconds, at which point a neutral prompt ('What would you try next?') is permitted.

Task 1: Log a receipt via camera

Instruction to read aloud:

"Imagine you have just returned from the sabzi mandi and you have a handwritten receipt for vegetables. Please use the app to log this expense from the receipt that is placed in front of you."

Key observations to record:

- Does the user find the camera icon without hesitation?
- Does the user understand the yellow-highlighted fields?
- Does the user edit the flagged field before confirming?
- Time to complete.

Task 2: Log a cash expense via voice

Instruction to read aloud:

"You just paid Rs. 120 for a rickshaw ride. There is no receipt. Please use the app to log this expense by speaking to it."

Key observations to record:

- Does the user find the microphone icon?
- Is the voice command phrasing natural or forced?
- Does the parsed result match the spoken input?
- Does the user trust and confirm the result?

Task 3: Add a manual expense entry

Instruction to read aloud:

"You paid the electricity bill — Rs. 3,200 — in cash at the bank. Please add this expense manually in the app."

Key observations to record:

- Does the user locate the manual entry path?
- Is the category dropdown intuitive?
- Does the user complete all fields or skip some?

Task 4: Review monthly spending summary

Instruction to read aloud:

"It is the end of the month. Please find out how much you spent on ration (groceries) this month."

Key observations to record:

- Does the user navigate to Monthly Summary in one step?
- Is the plain-language summary understood without explanation?
- Does the user look for a chart?

Task 5: Re-categorise a miscellaneous entry

Instruction to read aloud:

"You notice that a Rs. 800 plumber expense was saved under 'Misc'. Please move it to the correct category."

Key observations to record:

- Does the user know how to drill into Misc?
- Is the long-press / re-label interaction discoverable?
- Does the summary update visibly after re-labelling?

Task 6: Export weekly data (Pro View)

Instruction to read aloud:

"You want to send this week's expenses to your accountant as a CSV file. Please find the option to do this."

Key observations to record:

- Does the user discover the Pro View toggle?
- Is the export button visible and labelled clearly?
- Does the user attempt any incorrect paths first?

3.2 Informed Consent Form

Please read this form carefully. Ask questions if anything is unclear before signing.

DailyKhata Usability Study — Informed Consent

HCI & Computer Graphics, BNU
— Team patches

Purpose of the Study

You are being invited to participate in a usability study conducted by students Saad Mughal and Khadijah Zahoor as part of the HCI & Computer Graphics course at Beaconhouse National University (BNU). The purpose is to evaluate a prototype of DailyKhata, a mobile expense tracking app, to identify usability issues and improve the design.

What You Will Be Asked to Do

You will be asked to complete up to six short tasks using a prototype of the app on a device provided by the research team. The session will take approximately 45–50 minutes. You will be asked to 'think aloud' — to narrate your actions and thoughts as you work through each task.

Recording

With your permission, the session will be audio- and/or screen-recorded. Recordings will be used solely for research analysis and will not be shared outside the project team. Recordings will be deleted within 30 days of the course submission deadline.

Confidentiality

All data collected will be anonymised. Your name will not appear in any report or presentation. You will be referred to by a participant code (e.g., P01). No personally identifiable information will be published.

Voluntary Participation

Your participation is entirely voluntary. You may stop the session at any time and for any reason, with no consequences. You may also choose to skip any task or question.

Risks and Benefits

There are no known risks associated with participation. Your input will directly help improve the design of a mobile app intended to support Pakistani households in managing daily expenses.

Questions

If you have any questions about this study, please contact Saad Mughal (F2023-009) or Khadijah Zahoor (F2023-956) via BNU email or in person.

Consent Declaration

- I have read and understood the above information.
- I voluntarily agree to participate in this study.
- I agree to the session being audio/screen-recorded (delete if not applicable).
- I understand I may withdraw at any time without penalty.

Participant Name:

Participant Signature:

Date:

Researcher Name:

Researcher Signature:

3.3 Logging Sheet — Critical Incident & Task Observation Form

Complete one logging sheet per participant per session. Record task success/failure, time, and any noteworthy events. A critical incident is any event — positive or negative — that meaningfully affects the user's ability to complete the task.

Participant ID:		Session Date:	
Moderator:		Observer:	
Device used:		Recording?	Yes / No

Task	Success? (Y / N / P)	Time (mm:ss)	Errors / Wrong Paths	Critical Incidents & Observations
T1: Camera receipt logging				
T2: Voice expense logging				
T3: Manual entry				
T4: Monthly summary review				
T5: Re-categorise entry				
T6: CSV export (Pro View)				

P = Partial success (task completed with significant difficulty or moderator hint). Record time from task instruction read to task completion or abandonment.

Critical Incident Log

Record each critical incident as a separate row. A critical incident is any observable behaviour that reveals something important about the usability of the system.

#	Task	Time (mm:ss)	Description of Incident	Positive or Negative?	Severity (1–5)
1					
2					

3					
4					
5					
6					
7					
8					

General Observations

Use the space below for any observations not captured in the table above:

3.4 User Test Script — Moderator Guide

This script provides the exact wording and sequence of steps for the moderator to follow during each test session. Text in **[square brackets]** is a stage direction for the moderator and should not be read aloud. Text in *italics* is spoken verbatim.

Before the Session

[Prepare the device: open Figma prototype to the Home screen (WF-01).]

[Ensure the logging sheet and consent form are printed and ready.]

[Set up screen recording on a second device or Figma's built-in recorder.]

[Place a sample handwritten receipt on the table for Task 1.]

Welcome and Introduction

Thank you for coming in today. My name is [moderator name] and I am a student at BNU working on a class project. My colleague [observer name] will be taking notes during our session.

Today I am going to ask you to try out an early prototype of an app called DailyKhata — it is designed to help people track daily expenses in Pakistan. This is a very early version, so some things may not work perfectly, and that is completely fine.

*I want to be very clear: **we are testing the app, not you.** There are no right or wrong answers. If something is confusing, that tells us something important about the design, not about you.*

The session will take about 45 to 50 minutes. Do you have any questions before we begin?

Consent

[Hand the participant the consent form.]

Please take a moment to read this form. Let me know if you have any questions and please sign at the bottom if you agree to participate.

[Wait for signed consent. Check recording permission box.]

[Start screen recording if consent granted.]

Think-Aloud Training

Before we start the tasks, I would like to show you a technique called 'thinking aloud.' While you are using the app, I would like you to narrate what you are doing and what you are thinking — for example, 'I am looking for a button to add a new expense' or 'I am not sure what this icon means.'

Let's try a quick practice. [Hand participant the device.] Can you open the calculator app and narrate what you are doing as you type in the number 1234 and multiply it by 2?

[Observe. Prompt if the participant goes silent: 'Can you tell me what you are thinking right now?']

Great. That is exactly the kind of narration I am looking for during the tasks.

Task Introduction

I am going to give you a series of short tasks to complete in the app. I will read each task aloud and there will be a printed card in front of you as well. Please attempt each task as you normally would.

I cannot answer questions about how the app works during the tasks, but please keep narrating your thoughts out loud.

[Place device in front of participant with Home screen visible.]

During Each Task

[Read the task instruction aloud from Section 3.1. Place printed task card in front of participant.]

[Start timing. Take notes on the logging sheet.]

[If participant is silent for more than 15 seconds, prompt: 'What are you thinking right now?']

[If participant is stuck for more than 90 seconds, prompt: 'What would you try next?' Do not provide the answer.]

[If participant cannot complete the task after 3 minutes, say: 'Let us move on to the next task.' Record as failure on logging sheet.]

[Between tasks, reset prototype to the correct starting screen.]

After All Tasks

Thank you — that is all the tasks. You did a great job.

I am going to give you a short questionnaire now. It has ten statements and I would like you to rate how much you agree or disagree with each one based on your experience with the app today. There are no right or wrong answers.

[Hand participant the SUS questionnaire. Allow 5 minutes.]

Debrief Discussion

Now that you have filled in the questionnaire, I would love to hear any final thoughts. Is there anything about the app that you found particularly easy, confusing, or surprising?

Was there anything you expected the app to do that it did not do?

If you could change one thing about the app, what would it be?

[Record responses. Do not prompt further — let the participant lead.]

Closing

That is everything. Thank you so much for your time today — your feedback will directly shape the next version of this app. Is there anything else you would like to add?

[Stop recording. Collect consent form and questionnaire.]

[Thank participant and escort out.]

3.5 Post-Test Questionnaire — System Usability Scale (SUS)

The System Usability Scale (SUS) is a widely validated, ten-item Likert questionnaire that produces a single usability score between 0 and 100. We use SUS because it is quick (under 5 minutes), tool-agnostic, and provides a benchmark score that can be compared across iterations. Scores above 68 are considered above average; scores above 80 are considered excellent.

DailyKhata — Post-Test Questionnaire

Participant ID: _____ Date: _____ Session #: _____

For each of the following statements, please indicate how strongly you agree or disagree based on your experience with the DailyKhata app today. Circle or tick one number per row, where **1 = Strongly Disagree** and **5 = Strongly Agree**.

#	Statement	1	2	3	4	5
1	I think that I would like to use this app frequently.	☐	☐	☐	☐	☐
2	I found the app unnecessarily complex.	☐	☐	☐	☐	☐
3	I thought the app was easy to use.	☐	☐	☐	☐	☐
4	I think that I would need the support of a technical person to be able to use this app.	☐	☐	☐	☐	☐
5	I found the various functions in this app were well integrated.	☐	☐	☐	☐	☐
6	I thought there was too much inconsistency in this app.	☐	☐	☐	☐	☐
7	I would imagine that most people would learn to use this app very quickly.	☐	☐	☐	☐	☐
8	I found the app very cumbersome (awkward) to use.	☐	☐	☐	☐	☐
9	I felt very confident using the app.	☐	☐	☐	☐	☐
10	I needed to learn a lot of things before I could get going with this app.	☐	☐	☐	☐	☐

SUS Scoring Instructions (for researchers only — do not show to participants)

For odd-numbered items (1, 3, 5, 7, 9): score = (participant's rating) - 1. For even-numbered items (2, 4, 6, 8, 10): score = 5 - (participant's rating). Sum all ten converted scores and multiply by 2.5 to get the final SUS score (0–100).

Raw Score Sum:	_____	SUS Score (x 2.5):	_____	Grade:	_____
----------------	-------	--------------------	-------	--------	-------

Open-Ended Follow-Up (optional, read aloud after questionnaire)

Q: What was the easiest part of using the app today?

Q: What was the most confusing or frustrating part?

Q: Is there anything you wished the app could do that it currently does not?

Appendix — Wireframe Checklist & Figma Setup Notes

Wireframe Checklist (complete before submission)

- All 12 wireframe screens exported from Figma at 2x resolution (PNG).
- All 5 navigation flow diagrams exported with arrow annotations.
- Prototype link tested — accessible without a Figma account.
- Dummy data entered in all dynamic prototype frames (amounts, categories, dates).
- Consent forms printed (one per participant).
- Logging sheets printed (one per participant).
- SUS questionnaires printed (one per participant).
- Task instruction cards printed (one set per session).
- Screen recording software tested on session device.
- PDF named correctly: HCI-Spring2026-M3-patches.pdf

Figma Pro Setup — Quick Reference

- Create a new Figma file: 'DailyKhata — M03 Wireframes & Prototype'.
- Use frame size: Mobile (390 x 844 px) — iPhone 14 / Android equivalent.
- Enable the Wireframe Kit plugin (search 'Wireframe' in Figma Community).
- Set typeface to Inter, weight Regular / Bold only.
- Palette: #000000, #333333, #CCCCCC, #FFFFFF — no other colours.
- Create a separate page per section: 'Key Screens', 'Navigation Flows', 'Prototype'.
- On the Prototype page, connect frames using Figma's Prototype panel (right sidebar).
- Set prototype starting frame to WF-01 (Home).
- Share: click Share → Anyone with link → Can view → Copy link.

Lovable Pro — Optional High-Fidelity Demo

If the team decides to build a functional web prototype instead of or in addition to the Figma clickable prototype, use the following Lovable prompt as a starting point:

Build a mobile-first React expense tracking app called DailyKhata. The app should have five screens: (1) Home dashboard showing today's total spend and three buttons: Camera, Voice, and Manual; (2) Manual Entry form with Amount, Category dropdown (Ration, Transport, Utility, Misc), and Note fields; (3) Confirm screen showing a summary card with Confirm and Edit buttons; (4) Monthly Summary screen showing plain-text breakdown by category in Pakistani Rupees; (5) Transaction List showing daily entries. Use a clean, minimal black-and-white wireframe style with no colours. All text in English. Use dummy data: Rs.650 vegetable receipt, Rs.120 rickshaw, Rs.3200 electricity bill, monthly total Rs.28400.

Copy-paste the above prompt into Lovable Pro's chat interface to generate a functional clickable prototype.
