
Course: HCI & Computer Graphics(CSC-335)

Date: May 22, 2026

Instructor: Sania Khalid

Total Marks: 15

Quiz: 04

Time: 15 Min

Instructions:

- Answer all questions.
 - Write clearly and concisely.
 - Marks are indicated for each question.
-

Q1

[1 + 2 + 2 = 5 marks]

An e-commerce website buries its Returns Policy under "**About Us > Company Info > Legal,**" three levels deep in the navigation. Despite having a generous and customer-friendly policy, the company continues to receive a high volume of complaints about returns. Identify the specific Information Architecture problem this illustrates, explain why it creates a poor user experience, and suggest how the navigation structure could be improved to resolve it.?

Q2

[3 + 3 = 6 marks]

A design team is building the checkout flow for an online store. They propose displaying all three sign-in options, guest checkout, account login, and social sign-in simultaneously on a single screen, each with equal visual prominence. From a user flow perspective, explain the problem this approach creates and the design principle it violates. Then propose a structured solution that reduces friction and guides users more effectively through the checkout process.

Q3

[4 marks]

A health and wellness app uses red icons to indicate an "at risk" status and green icons to indicate a "healthy" status across all its dashboards. A user with red-green colour blindness reports that they are completely unable to distinguish between the two states. Identify the accessibility principle that was overlooked in this design, and propose a concrete, multi-layered fix that would make the feature accessible to all users.
