

Install Git on Windows

1. Download the latest [Git for windows installer](#)
2. When you've successfully started the installer, you should see the **Git Setup** wizard screen. Follow the **Next** and **Finish** prompts to complete the installation. The default options are pretty sensible for most users.
3. Open a Command Prompt, run the following command
 - i. `git --version`
4. Run the following commands to configure your Git username and email using the following commands, replacing Emma's name with your own. These details will be associated with any commits that you create:
 - i. `$ git config --global user.name "Muhammad Ali"`
 - ii. `$ git config --global user.email 20030054@lums.edu.pk`
5. replacing name and email with your own. These details will be associated with any commits that you create.
