

Installation Guide for MongoDB Server (Windows 10):

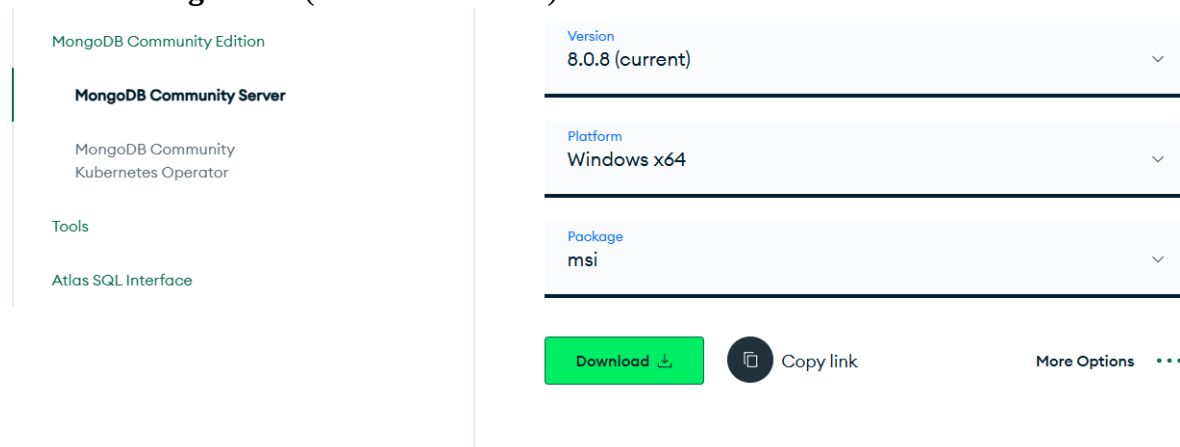

1. Go to the MongoDB Download Page:

- Visit: <https://www.mongodb.com/try/download/community>

2. Choose Your Version:

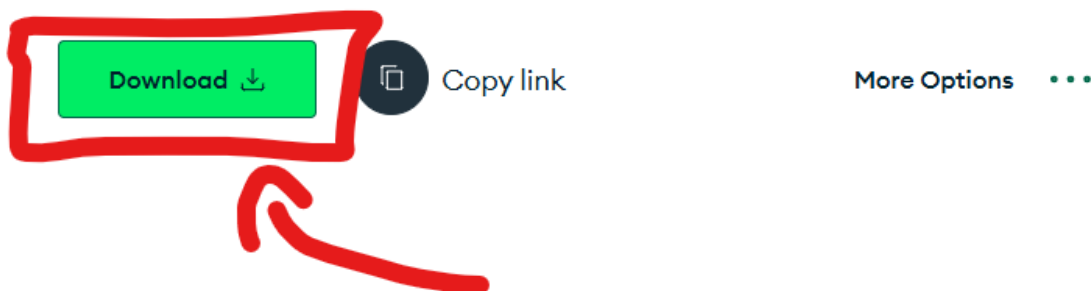

- **Edition:** MongoDB Community Server
- **Version:** Choose the latest stable version.
- **OS:** Windows
- **Package:** MSI (Windows Installer)

3. Download the Installer:

- Click the “**Download**” button.
- A .msi file will begin downloading.

Version	8.0.8 (current)	▼
Platform	Windows x64	▼
Package	msi	▼

✂ Installing MongoDB Server:

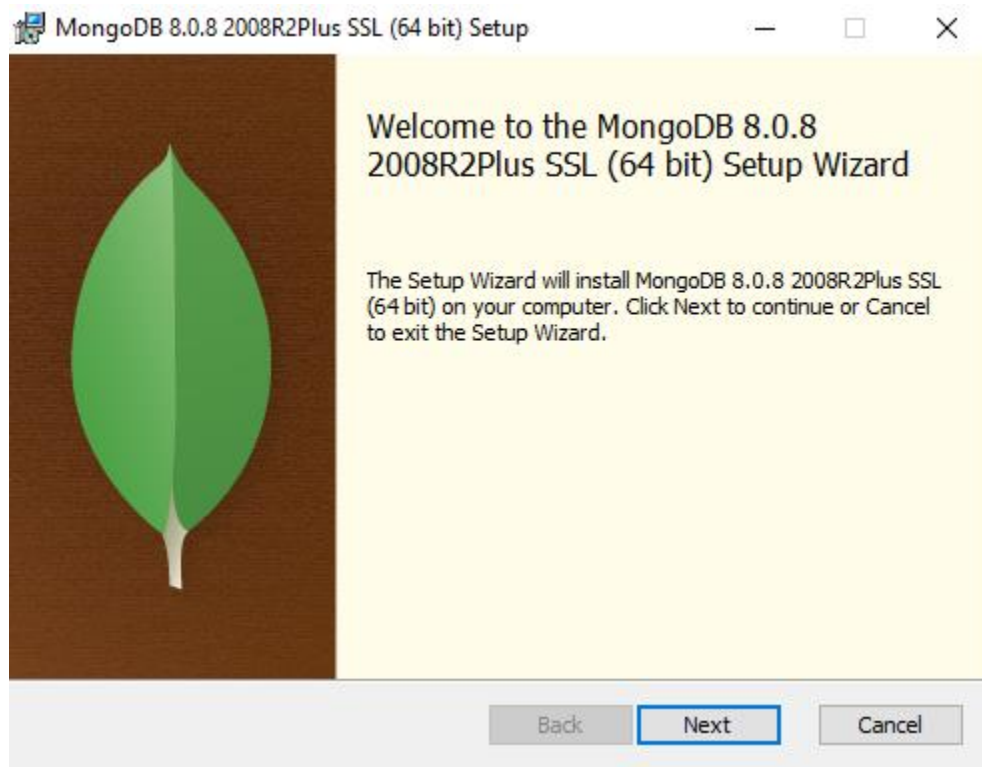

4. Run the Installer:

- Double-click the .msi file to launch the setup wizard.

	Installation Guide for MongoDB Server	4/22/2025 3:13 PM	Microsoft Word D...	14 KB
	Installation Guide for MongoDB Server	4/22/2025 3:11 PM	Microsoft Edge P...	311 KB
	mongodb-windows-x86_64-8.0.8-signed	4/22/2025 3:16 PM	Windows Installer ...	735,184 KB

5. Follow the Installation Wizard:

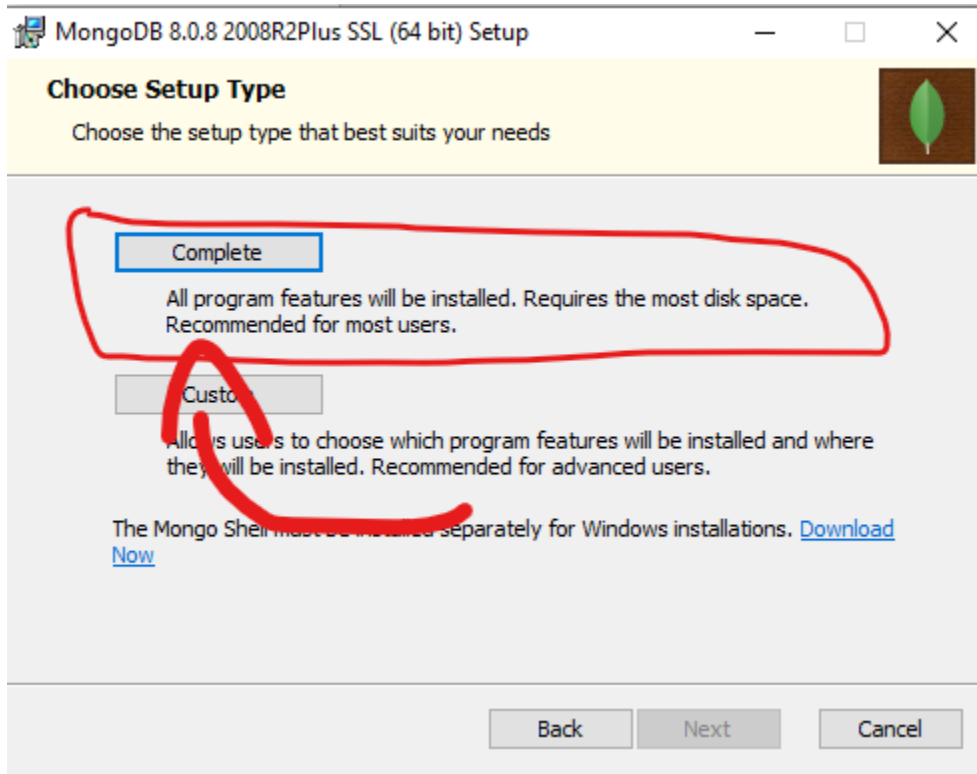

- Click **Next** on the welcome screen.

- **Accept the License Agreement**, click Next.

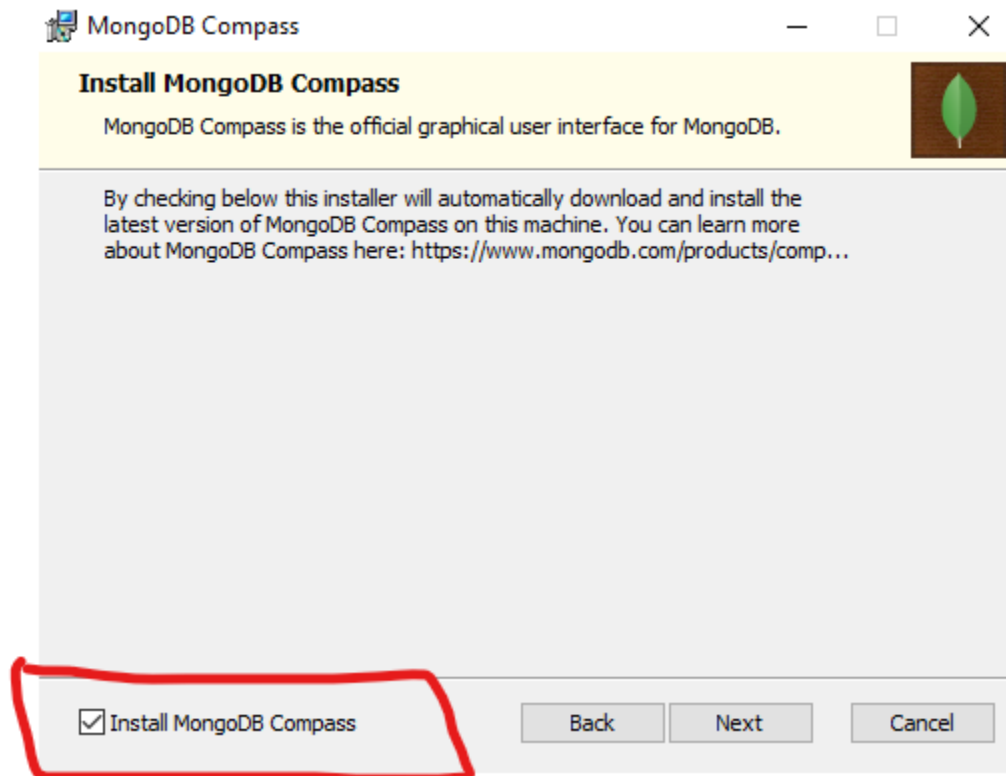

- **Choose Setup Type**: Select **Complete** (recommended).

- **Service Configuration:**
 - Choose **Run service as Network Service user**.
 - Let it install **MongoDB as a Service** (recommended).
 - This means MongoDB will start automatically as a background service when Windows starts.

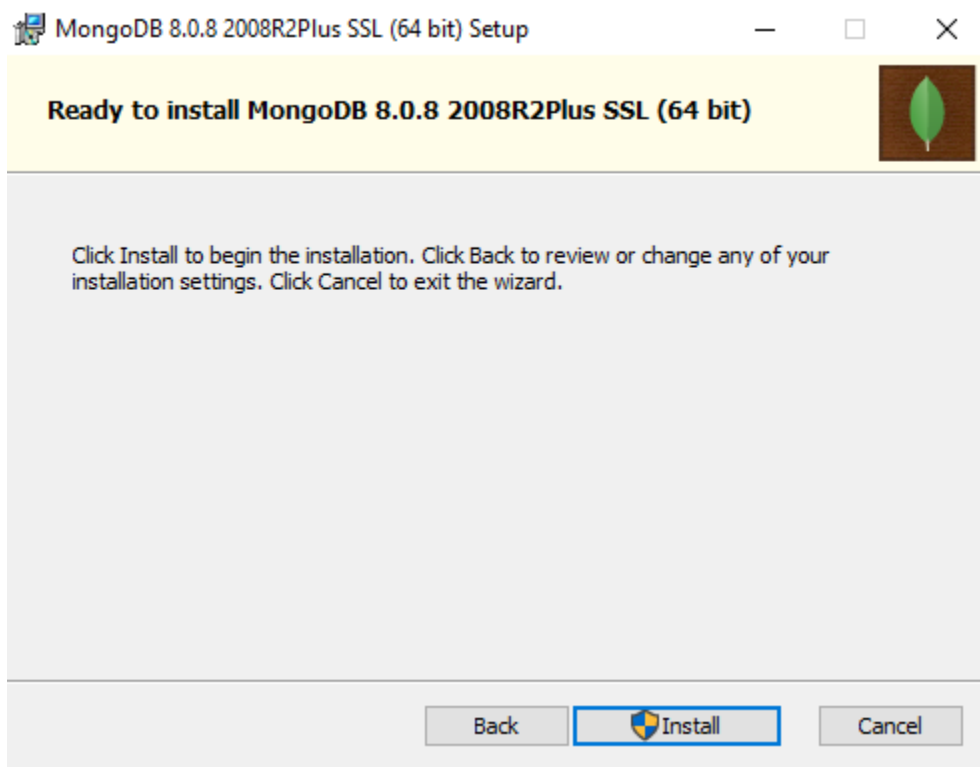

6. Install MongoDB Compass (optional):

- You can choose to install **MongoDB Compass** during the setup (you might have already installed it separately — up to you).

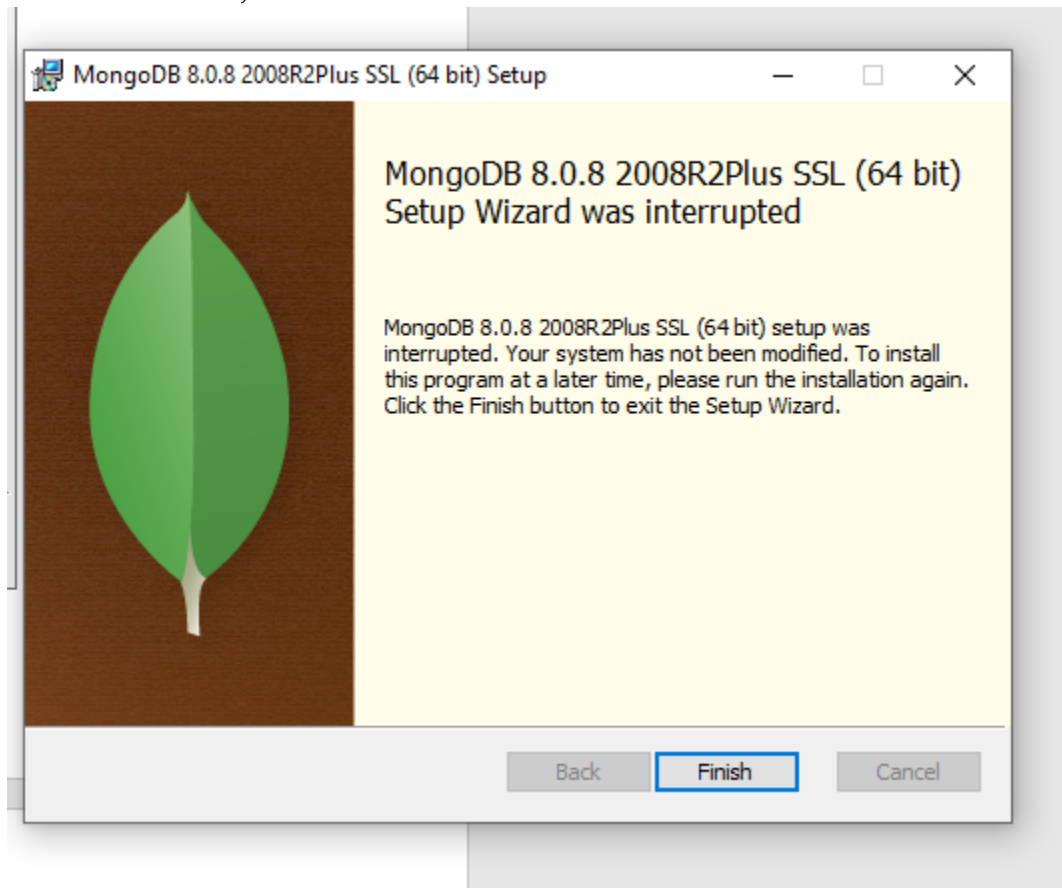

7. Finish Installation:

- Click **Install** and let it complete.

- Once done, click **Finish**.

✓ Verify MongoDB Installation:

8. Open Command Prompt:

```
mongod --version
```

If it shows the version, it's installed successfully.

9. Start the MongoDB Server (if not running automatically):

```
mongod
```

- This will start the MongoDB server.
- By default, it listens on port 27017.

• Optional: Add MongoDB to PATH (if not already)

If mongod or mongo doesn't work from any folder in CMD, do this:

1. Go to: C:\Program Files\MongoDB\Server\<version>\bin
2. Copy the path.
3. Open **System Properties** → **Environment Variables** → **Path** → **Edit**.
4. Add the copied path there and save.

Here's how you can download and install **MongoDB Compass** on **Windows 10**:

✓ Step-by-Step Guide:

1. **Go to the MongoDB Compass download page:**
 - Visit: <https://www.mongodb.com/try/download/compass>
2. **Choose the correct version:**
 - **Platform:** Select **Windows 64-bit (7+)** (It also works for Windows 10).
 - **Package:** Choose the **MSI** installer (recommended for easy installation).
 - **Version:** Go with the **latest stable version** unless you need a specific one.
3. **Download the installer:**
 - Click the **“Download”** button.
 - The .msi file will start downloading.
4. **Run the installer:**
 - Once downloaded, double-click the .msi file.
 - Follow the installation steps:

- Click **Next**.
- Accept the license agreement.
- Choose install location (default is fine).
- Click **Install**.
- Wait for installation to complete.

5. **Launch MongoDB Compass:**

- You can now open MongoDB Compass from the Start menu or desktop shortcut.
- On first launch, you can connect to a local or remote MongoDB server.
