
Computer Org. & Assembly Language (CSC-236)

Assignment: 1

Date: 07-04-2025

Instructor: Nimra Abbas

Total Marks: 30

Deadline: 13-04-2025

Name: _____**Reg. No:** _____

Q:1.) Write an assembly program that will sum first 10 prime numbers using only two registers ax and bx. You have to use ax to accumulate the sum whereas bx will be used to get the next hardcoded number in the list of first 10 Prime numbers. Store the final result (sum of 10 Prime numbers) in dx register. [10 marks]

Prime Numbers: 2,3,5,7,11,13,17,19,23,29 (Sum=129)

Q:2.) Write an assembly program that checks in binary whether a 16-bit number is palindrome or not. Move 1 in dx register if it is a palindrome else move 0 in dx register. Palindrome is a number which reads the same backward or forward. [10 marks]

Q:3.) Write a program to calculate the factorial of a number where factorial is defined as:
 $\text{FACTORIAL}(X) = X * (X-1) * (X-2) * \dots * 1$ [10 marks]

Note: Submit your code files in classroom for each question and save it with (Q1,Q2,Q3).

*******Good Luck*******
