

Human Computer Interaction (CSC-335)

Lab Assignment: Wireframing from a Reference UI

Spring 2026 | Instructor: Sania Khalid | Credit Hours: 3

Assessment Criteria

Criteria	Description
Completion (30%)	Both wireframes (Desktop + Mobile) fully completed before the end of the lab session
Quality (40%)	Accurate layout zones, correct wireframe fidelity (greyscale, no real images), proper element hierarchy
Documentation (20%)	All layers named, pages organised, Figma link shared with view access
Originality (10%)	Independent work — wireframe decisions made by the student, not AI-generated

No late submissions. Share the Figma link (Anyone can view) before leaving the lab.

Reference Image — Spotify Desktop Home Screen

Study this interface carefully before opening Figma. Identify every layout zone, the element types within each zone, and the visual hierarchy. Your wireframes must reflect this exact screen structure.

Figure 1: Spotify Desktop Home Screen — the UI you will wireframe

Wireframe 1 — Desktop (1440 × 900 px)

The wireframe below maps every layout zone of the Spotify desktop screen into greyscale boxes, bars, and placeholders. No real colours, no real images — only structure and hierarchy. Use this as your drawing guide in Figma.

Figure 2: Spotify Desktop Wireframe — your Figma output must match this structure

Wireframe 2 — Mobile (390 × 844 px)

The mobile wireframe adapts the Spotify interface for a phone screen. The sidebar is removed. The quick access grid becomes 2 columns. Album card rows show fewer cards. The layout stacks vertically in a single column.

Figure 3: Spotify Mobile Wireframe — your Figma output must match this structure

Task Instructions

Follow these instructions exactly. Each step is a requirement, not a suggestion. Deviating from the structure shown in the wireframes above will result in mark deductions.

Step 1 — File Setup

1. Create a new Figma file named: HCI-SpotifyWireframe-YourName
2. Create two pages inside the file: Desktop Wireframe and Mobile Wireframe
3. On each page, add the correct device frame — Desktop Wireframe page: use a 1440 × 900 custom frame. Mobile Wireframe page: use iPhone 16 & 17 Pro Max (440 × 956) or a 390 × 844 custom frame
4. Create a third page named StyleGuide and save all greyscale colour styles listed below

Step 2 — Build the Desktop Wireframe

On the Desktop Wireframe page, recreate the layout shown in Figure 2 exactly. Build each zone as a named group or Auto Layout frame:

1. Top Navigation Bar — Horizontal Auto Layout, full width, 64 px height, WF/Panel fill. Three child groups: left (arrow bars), centre (circle + rounded search rect), right (three circles)
2. Left Sidebar — Vertical Auto Layout, 72 px wide, Fill Container height, WF/Panel fill. One circle/icon at top, 10 small square rounded rects below with 8 px gap
3. Filter Tabs — Horizontal Auto Layout, gap 8 px. Create a TabPill component with Active variant (WF/Dark fill) and Inactive variant (no fill, WF/Stroke outline). Place 4 instances: All=Active, rest=Inactive
4. Quick Access Grid — Auto Layout or manual placement: 2 rows, 4 columns, 8 px gap. Create a QuickCard component — horizontal layout, 310×50 px, rounded corners 6 px, small thumbnail rect left, text bar right. Use 8 instances
5. 'Jump Back In' section — Section header row (Auto Layout, space between, bold title bar left + small text bar right). Below: horizontal row of 7 AlbumCard component instances. AlbumCard = square image placeholder with X cross + title bar + desc bar
6. 'More of What You Like' section — identical structure to Jump Back In. Use the same AlbumCard component. 7 instances
7. Now Playing Bar — Horizontal Auto Layout, full width, 80 px height, WF/Panel fill. Three groups: left (small square thumbnail + 2 text bars), centre (5 circle icons + thin progress bar rect), right (circle icon + thin bar)

Step 3 — Build the Mobile Wireframe

On the Mobile Wireframe page, recreate the layout shown in Figure 3 exactly:

1. Status Bar — full width strip, 30 px height, text bar left (time), 3 tiny circles right (signal)
2. Top Navigation Bar — Horizontal Auto Layout, 52 px height, full width. Back arrow text left, search bar rounded rect centre (fills remaining width), avatar circle right
3. Filter Tabs — same TabPill component as desktop. 4 instances in a horizontal row
4. Quick Access Grid — 2 columns × 2 rows. Use same QuickCard component but resize to 180×58 px. 4 instances total
5. 'Jump Back In' section — section header row + horizontal row of 3 AlbumCard instances (118×118 px square). Same AlbumCard component, resized
6. 'More of What You Like' section — identical structure. 3 AlbumCard instances
7. Now Playing Bar — full width, 72 px height. Album thumb small square left, 2 text bars, heart circle. 3 playback circles right. Thin progress bar at bottom spanning full width

Step 4 — Naming & Organisation

1. Every frame, group, and component must have a meaningful name — no 'Rectangle 3', 'Group 7', or 'Frame 12'
2. Each layout zone must be its own named group or frame: Navbar, Sidebar, FilterTabs, QuickGrid, JumpBackIn, MoreLikeThis, NowPlayingBar
3. Component names: TabPill, QuickCard, AlbumCard (used on both pages)
4. Share the file link with Anyone can view permissions before submission

Grading Rubric — 10 Points

Criteria	Points
File Setup: correct file name, Desktop and Mobile pages created, StyleGuide page with all 7 WF colour styles saved and named correctly	1
Desktop — Top Nav Bar: 3-group Horizontal Auto Layout, correct icons (arrows, home circle, search rect, 3 right circles), WF/Panel fill, 64 px height	1
Desktop — Left Sidebar + Filter Tabs + Quick Grid: sidebar (72 px, 10 thumbnails), TabPill component with Active/Inactive variants (4 instances), QuickCard component (8 instances in 2×4 layout)	2
Desktop — Album Card Sections: AlbumCard component built correctly (X-cross placeholder + 2 text bars); 'Jump Back In' section with 7 instances; 'More of What You Like' section with 7 instances; both section headers use space-between Auto Layout	2
Desktop — Now Playing Bar: 3-group layout, all elements present (thumb, text bars, 5 control circles, progress bar, volume bar),	1
Mobile — Top Nav, Filter Tabs,, both content sections (3 cards each), Now Playing Bar — all zones present using the same components from desktop, adapted to single-column layout	2
Layer naming: all zones named, all components named (TabPill/QuickCard/AlbumCard), no default Figma layer names anywhere in either page. File shared with Anyone can view.	1
SUBTOTAL	10
